### Understanding **Embedded - FPGAs (Field Programmable Gate Array)**

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### **Applications of Embedded - FPGAs**

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### **Details**

Product Status	Active
Number of LABs/CLBs	-
Number of Logic Elements/Cells	-
Total RAM Bits	36864
Number of I/O	68
Number of Gates	250000
Voltage - Supply	1.425V ~ 1.575V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	100-TQFP
Supplier Device Package	100-VQFP (14x14)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/microchip-technology/a3p250-2vqg100i">https://www.e-xfl.com/product-detail/microchip-technology/a3p250-2vqg100i</a>

## I/Os with Advanced I/O Standards

The ProASIC3 family of FPGAs features a flexible I/O structure, supporting a range of voltages (1.5 V, 1.8 V, 2.5 V, and 3.3 V). ProASIC3 FPGAs support many different I/O standards—single-ended and differential.

The I/Os are organized into banks, with two or four banks per device. The configuration of these banks determines the I/O standards supported (Table 1-1).

**Table 1-1 • I/O Standards Supported**

I/O Bank Type	Device and Bank Location	I/O Standards Supported		
		LVTTL/ LVC MOS	PCI/PCI-X	LVPECL, LVDS, B-LVDS, M-LVDS
Advanced	East and west Banks of A3P250 and larger devices	✓	✓	✓
Standard Plus	North and south banks of A3P250 and larger devices All banks of A3P060 and A3P125	✓	✓	Not supported
Standard	All banks of A3P015 and A3P030	✓	Not supported	Not supported

Each I/O module contains several input, output, and enable registers. These registers allow the implementation of the following:

- Single-Data-Rate applications
- Double-Data-Rate applications—DDR LVDS, B-LVDS, and M-LVDS I/Os for point-to-point communications

ProASIC3 banks for the A3P250 device and above support LVPECL, LVDS, B-LVDS and M-LVDS. B-LVDS and M-LVDS can support up to 20 loads.

Hot-swap (also called hot-plug, or hot-insertion) is the operation of hot-insertion or hot-removal of a card in a powered-up system.

Cold-sparing (also called cold-swap) refers to the ability of a device to leave system data undisturbed when the system is powered up, while the component itself is powered down, or when power supplies are floating.

## Wide Range I/O Support

ProASIC3 devices support JEDEC-defined wide range I/O operation. ProASIC3 supports the JESD8-B specification, covering both 3 V and 3.3 V supplies, for an effective operating range of 2.7 V to 3.6 V.

Wider I/O range means designers can eliminate power supplies or power conditioning components from the board or move to less costly components with greater tolerances. Wide range eases I/O bank management and provides enhanced protection from system voltage spikes, while providing the flexibility to easily run custom voltage applications.

## Specifying I/O States During Programming

You can modify the I/O states during programming in FlashPro. In FlashPro, this feature is supported for PDB files generated from Designer v8.5 or greater. See the [FlashPro User's Guide](#) for more information.

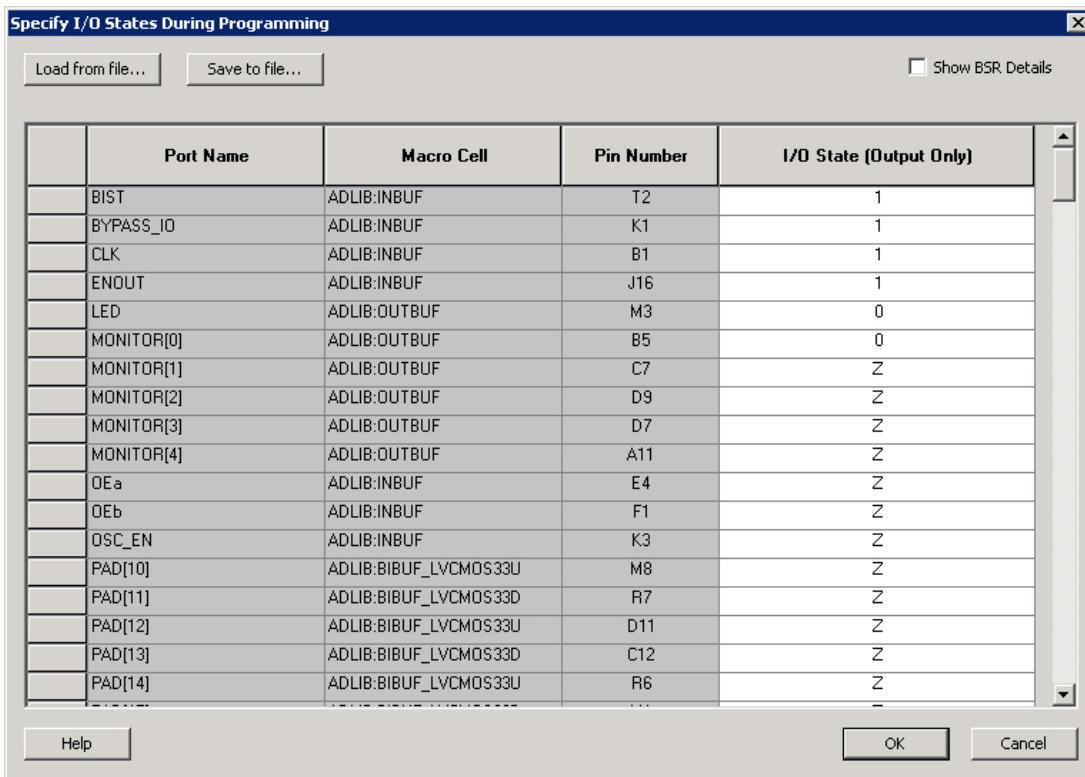

**Note:** PDB files generated from Designer v8.1 to Designer v8.4 (including all service packs) have limited display of Pin Numbers only.

1. Load a PDB from the FlashPro GUI. You must have a PDB loaded to modify the I/O states during programming.
2. From the FlashPro GUI, click PDB Configuration. A FlashPoint – Programming File Generator window appears.
3. Click the Specify I/O States During Programming button to display the Specify I/O States During Programming dialog box.
4. Sort the pins as desired by clicking any of the column headers to sort the entries by that header. Select the I/Os you wish to modify ([Figure 1-4 on page 1-8](#)).
5. Set the I/O Output State. You can set Basic I/O settings if you want to use the default I/O settings for your pins, or use Custom I/O settings to customize the settings for each pin. Basic I/O state settings:  
1 – I/O is set to drive out logic High

0 – I/O is set to drive out logic Low

Last Known State – I/O is set to the last value that was driven out prior to entering the programming mode, and then held at that value during programming

Z -Tristate: I/O is tristated

**Figure 1-4 • I/O States During Programming Window**

6. Click OK to return to the FlashPoint – Programming File Generator window.

**Note:** I/O States During programming are saved to the ADB and resulting programming files after completing programming file generation.

Note: For specific junction temperature and voltage supply levels, refer to Table 2-6 on page 2-6 for derating values.

## 2.5 V LVC MOS

Low-Voltage CMOS for 2.5 V is an extension of the LVC MOS standard (JESD8-5) used for general-purpose 2.5 V applications.

**Table 2-56 • Minimum and Maximum DC Input and Output Levels  
Applicable to Advanced I/O Banks**

2.5 V LVC MOS	VIL		VIH		VOL	VOH	IOL	IOH	IOSL	IOSH	IIL <sup>1</sup>	IIH <sup>2</sup>
Drive Strength	Min. V	Max. V	Min. V	Max. V	Max. V	Min. V	mA	mA	Max. mA <sup>3</sup>	Max. mA <sup>3</sup>	µA <sup>4</sup>	µA <sup>4</sup>
2 mA	-0.3	0.7	1.7	2.7	0.7	1.7	2	2	18	16	10	10
4 mA	-0.3	0.7	1.7	2.7	0.7	1.7	4	4	18	16	10	10
6 mA	-0.3	0.7	1.7	2.7	0.7	1.7	6	6	37	32	10	10

## JTAG 1532 Characteristics

JTAG timing delays do not include JTAG I/Os. To obtain complete JTAG timing, add I/O buffer delays to the corresponding standard selected; refer to the I/O timing characteristics in the "User I/O Characteristics" section on page 2-15 for more details.

### Timing Characteristics

**Table 2-125 • JTAG 1532**

Commercial-Case Conditions:  $T_J = 70^\circ\text{C}$ , Worst-Case VCC = 1.425 V

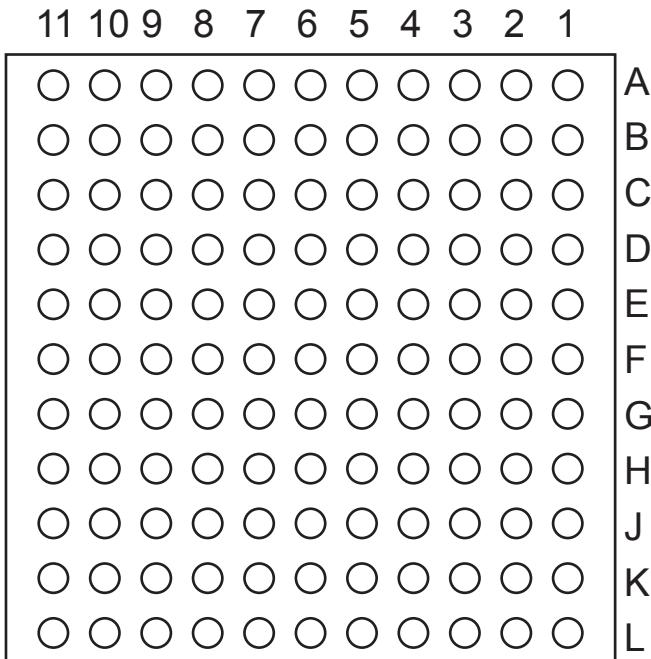

Parameter	Description	-2	-1	Std.	Units
$t_{DISU}$	Test Data Input Setup Time	0.50	0.57	0.67	ns
$t_{DIHD}$	Test Data Input Hold Time	1.00	1.13	1.33	ns
$t_{TMSSU}$	Test Mode Select Setup Time	0.50	0.57	0.67	ns
$t_{TMDHD}$	Test Mode Select Hold Time	1.00	1.13	1.33	ns
$t_{TCK2Q}$	Clock to Q (data out)	6.00	6.80	8.00	ns
$t_{RSTB2Q}$	Reset to Q (data out)	20.00	22.67	26.67	ns
$F_{TCKMAX}$	TCK Maximum Frequency	25.00	22.00	19.00	MHz
$t_{TRSTREM}$	ResetB Removal Time	0.00	0.00	0.00	ns
$t_{TRSTREC}$	ResetB Recovery Time	0.20	0.23	0.27	ns
$t_{TRSTMPW}$	ResetB Minimum Pulse	TBD	TBD	TBD	ns

Note: For specific junction temperature and voltage supply levels, refer to Table 2-6 on page 2-6 for derating values.

## 5 – Datasheet Information

### List of Changes

The following table lists critical changes that were made in each version of the ProASIC3 datasheet.

Revision	Changes	Page
Revision 18 (March 2016)	Updated 3.3 V DC supply voltage's maximum Commercial and Industrial values from 3.3 V to 3.6 V in <a href="#">Table 2-2</a> (SAR 72693).	<a href="#">2-2</a>
	Added reference of Package Mechanical Drawings document in all package pin assignment notes (76833).	NA
Revision 17 (June 2015)	Removed PQFP embedded heat spreader info. from <a href="#">Table 2-5</a> (SAR 52320).	<a href="#">2-6</a>
	Updated " <a href="#">VCCIBx I/O Supply Voltage</a> " (SAR 43323).	<a href="#">3-1</a>
Revision 16 (December 2014)	Updated " <a href="#">ProASIC3 Ordering Information</a> ". Interchanged the positions of Y- Security Feature and I- Application (Temperature Range) (SAR 61079). Added Note "Only devices with package size greater than or equal to 5x5 are supported".	<a href="#">1-IV</a>
	Updated Table Note (2) in <a href="#">Table 2-3 • Flash Programming Limits – Retention, Storage and Operating Temperature</a> so that the Table Note is not applicable for Maximum Storage Temperature $T_{STG}$ (SAR 54297).	<a href="#">2-3</a>
	Added values for Drive strength 2 mA in <a href="#">Table 2-41 • 3.3 V LVTTL / 3.3 V LVCmos High Slew</a> , <a href="#">Table 2-42 • 3.3 V LVTTL / 3.3 V LVCmos Low Slew</a> , <a href="#">Table 2-43 • 3.3 V LVTTL / 3.3 V LVCmos High Slew</a> , and <a href="#">Table 2-44 • 3.3 V LVTTL / 3.3 V LVCmos Low Slew</a> (SAR 57184).	<a href="#">2-34, 2-35, 2-36, 2-37</a>
	Added <a href="#">Figure 2-1 • High-Temperature Data Retention (HTR)</a> (SAR 45466).	<a href="#">2-3</a>
	Updates made to maintain the style and consistency of the document.	NA
Revision 15 (July 2014)	Added corner pad table note (3) to " <a href="#">QN132 – Bottom View</a> " (SAR 47442).	<a href="#">4-6</a>
	Ambient temperature removed in <a href="#">Table 2-2</a> , table notes and " <a href="#">ProASIC3 Ordering Information</a> " figure were modified (SAR 48343).	<a href="#">2-2</a> <a href="#">1-IV</a>
	Other updates were made to maintain the style and consistency of the datasheet.	NA
Revision 14 (April 2014)	Note added for the discontinuance of QN132 package to the following tables and section: " <a href="#">ProASIC3 Devices</a> ", " <a href="#">I/Os Per Package 1</a> ", " <a href="#">ProASIC3 FPGAs Package Sizes Dimensions</a> " and " <a href="#">QN132 – Bottom View</a> " section (SAR 55118).	<a href="#">I, III, 4-6</a>
