Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Differential I/O Characteristics

Physical Implementation

Configuration of the I/O modules as a differential pair is handled by Microsemi Designer software when the user instantiates a differential I/O macro in the design.

Differential I/Os can also be used in conjunction with the embedded Input Register (InReg), Output Register (OutReg), Enable Register (EnReg), and Double Data Rate (DDR). However, there is no support for bidirectional I/Os or tristates with the LVPECL standards.

LVDS

Low-Voltage Differential Signaling (ANSI/TIA/EIA-644) is a high-speed, differential I/O standard. It requires that one data bit be carried through two signal lines, so two pins are needed. It also requires external resistor termination.

The full implementation of the LVDS transmitter and receiver is shown in an example in Figure 2-12. The building blocks of the LVDS transmitter-receiver are one transmitter macro, one receiver macro, three board resistors at the transmitter end, and one resistor at the receiver end. The values for the three driver resistors are different from those used in the LVPECL implementation because the output standard specifications are different.

Along with LVDS I/O, ProASIC3 also supports Bus LVDS structure and Multipoint LVDS (M-LVDS) configuration (up to 40 nodes).

Revision	Changes	Page
v2.0 (April 2007)	In the "Packaging Tables", Ambient was deleted.	ii
	The timing characteristics tables were updated.	N/A
	The "PLL Macro" section was updated to add information on the VCO and PLL outputs during power-up.	2-15
	The "PLL Macro" section was updated to include power-up information.	2-15
	Table 2-11 • ProASIC3 CCC/PLL Specification was updated.	2-29
	Figure 2-19 • Peak-to-Peak Jitter Definition is new.	2-18
	The "SRAM and FIFO" section was updated with operation and timing requirement information.	2-21
	The "RESET" section was updated with read and write information.	2-25
	The "RESET" section was updated with read and write information.	2-25
	The "Introduction" in the "Advanced I/Os" section was updated to include information on input and output buffers being disabled.	2-28
	PCI-X 3.3 V was added to Table 2-11 • VCCI Voltages and Compatible Standards.	2-29
	In the Table 2-15 • Levels of Hot-Swap Support, the ProASIC3 compliance descriptions were updated for levels 3 and 4.	2-34
	Table 2-43 • I/O Hot-Swap and 5 V Input Tolerance Capabilities in ProASIC3 Devices was updated.	2-64
	Notes 3, 4, and 5 were added to Table 2-17 • Comparison Table for 5 V–Compliant Receiver Scheme. 5 x 52.72 was changed to 52.7 and the Maximum current was updated from 4 x 52.7 to 5 x 52.7.	2-40
	The "VCCPLF PLL Supply Voltage" section was updated.	2-50
	The "VPUMP Programming Supply Voltage" section was updated.	2-50
	The "GL Globals" section was updated to include information about direct input into quadrant clocks.	2-51
	V_{JTAG} was deleted from the "TCK Test Clock" section.	2-51
	In Table 2-22 • Recommended Tie-Off Values for the TCK and TRST Pins, TSK was changed to TCK in note 2. Note 3 was also updated.	2-51
	Ambient was deleted from Table 3-2 • Recommended Operating Conditions. VPUMP programming mode was changed from "3.0 to 3.6" to "3.15 to 3.45".	3-2
	Note 3 is new in Table 3-4 • Overshoot and Undershoot Limits (as measured on quiet I/Os)1.	3-2
	In EQ 3-2, 150 was changed to 110 and the result changed from 3.9 to 1.951.	3-5
	Table 3-6 • Temperature and Voltage Derating Factors for Timing Delays was updated.	3-6
	Table 3-5 • Package Thermal Resistivities was updated.	3-5
	Table 3-14 • Summary of Maximum and Minimum DC Input and Output Levels Applicable to Commercial and Industrial Conditions—Software Default Settings (Advanced) and Table 3-17 • Summary of Maximum and Minimum DC Input Levels Applicable to Commercial and Industrial Conditions (Standard Plus) were updated.	3-17 to 3-17

Datasheet Categories

Categories

In order to provide the latest information to designers, some datasheet parameters are published before data has been fully characterized from silicon devices. The data provided for a given device, as highlighted in the "ProASIC3 Device Status" table on page IV, is designated as either "Product Brief," "Advance," "Preliminary," or "Production." The definitions of these categories are as follows:

Product Brief

The product brief is a summarized version of a datasheet (advance or production) and contains general product information. This document gives an overview of specific device and family information.

Advance

This version contains initial estimated information based on simulation, other products, devices, or speed grades. This information can be used as estimates, but not for production. This label only applies to the DC and Switching Characteristics chapter of the datasheet and will only be used when the data has not been fully characterized.

Preliminary

The datasheet contains information based on simulation and/or initial characterization. The information is believed to be correct, but changes are possible.

Unmarked (production)

This version contains information that is considered to be final.

Export Administration Regulations (EAR)

The products described in this document are subject to the Export Administration Regulations (EAR). They could require an approved export license prior to export from the United States. An export includes release of product or disclosure of technology to a foreign national inside or outside the United States.

Safety Critical, Life Support, and High-Reliability Applications Policy

The products described in this advance status document may not have completed the Microsemi qualification process. Products may be amended or enhanced during the product introduction and qualification process, resulting in changes in device functionality or performance. It is the responsibility of each customer to ensure the fitness of any product (but especially a new product) for a particular purpose, including appropriateness for safety-critical, life-support, and other high-reliability applications. Consult the Microsemi SoC Products Group Terms and Conditions for specific liability exclusions relating to life-support applications. A reliability report covering all of the SoC Products Group’s products is available at http://www.microsemi.com/soc/documents/ORT_Report.pdf. Microsemi also offers a variety of enhanced qualification and lot acceptance screening procedures. Contact your local sales office for additional reliability information.
