

Welcome to [E-XFL.COM](#)

### Understanding **Embedded - FPGAs (Field Programmable Gate Array)**

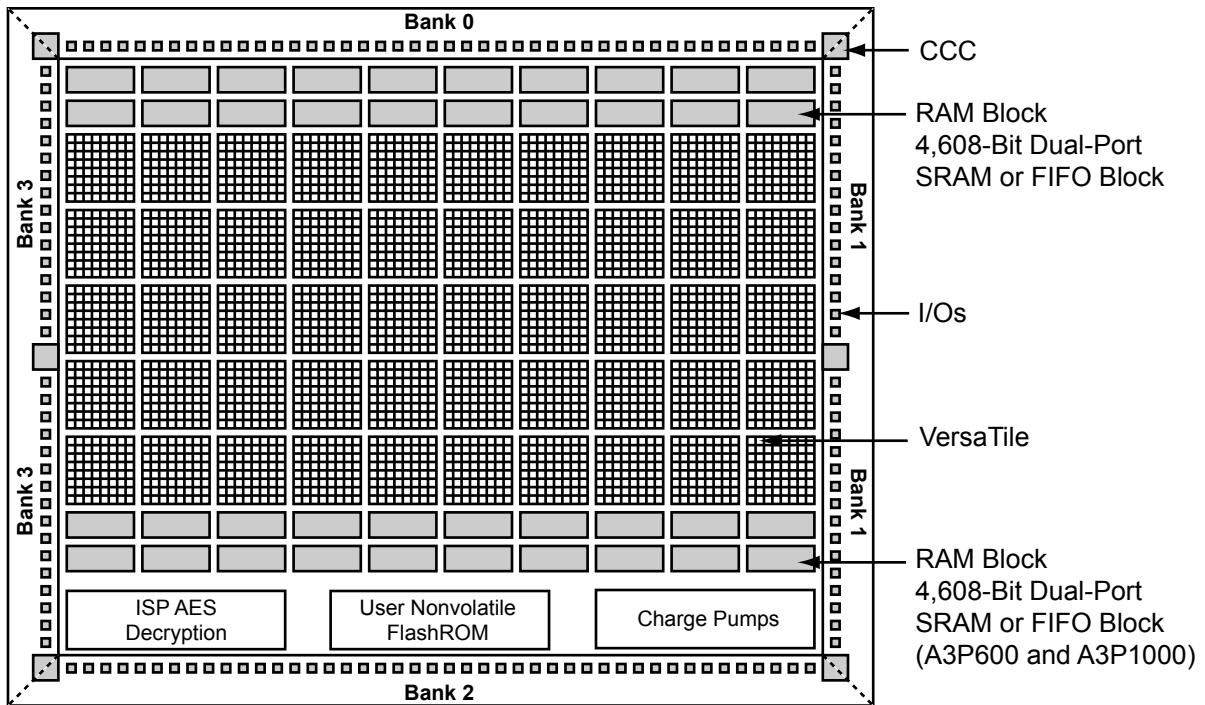

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### **Applications of Embedded - FPGAs**

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

#### **Details**

Product Status	Obsolete
Number of LABs/CLBs	-
Number of Logic Elements/Cells	-
Total RAM Bits	110592
Number of I/O	154
Number of Gates	600000
Voltage - Supply	1.425V ~ 1.575V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	208-BFQFP
Supplier Device Package	208-PQFP (28x28)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/microchip-technology/a3p600-2pq208">https://www.e-xfl.com/product-detail/microchip-technology/a3p600-2pq208</a>

**Figure 1-2 • ProASIC3 Device Architecture Overview with Four I/O Banks (A3P250, A3P600, and A3P1000)**

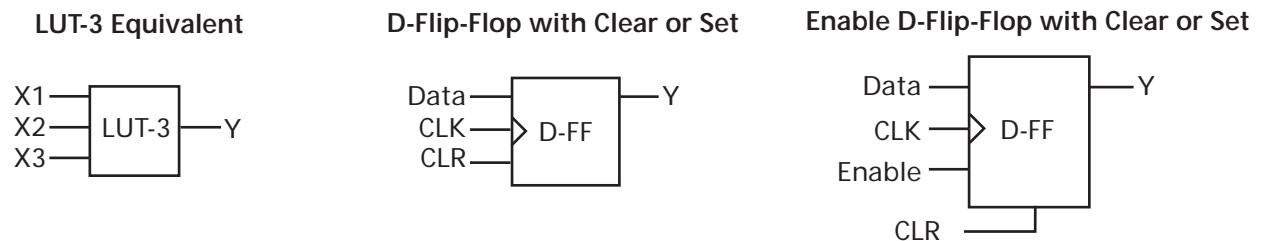

The FPGA core consists of a sea of VersaTiles. Each VersaTile can be configured as a three-input logic function, a D-flip-flop (with or without enable), or a latch by programming the appropriate flash switch interconnections. The versatility of the ProASIC3 core tile as either a three-input lookup table (LUT) equivalent or as a D-flip-flop/latch with enable allows for efficient use of the FPGA fabric. The VersaTile capability is unique to the Microsemi ProASIC family of third-generation architecture flash FPGAs. VersaTiles are connected with any of the four levels of routing hierarchy. Flash switches are distributed throughout the device to provide nonvolatile, reconfigurable interconnect programming. Maximum core utilization is possible for virtually any design.

### VersaTiles

The ProASIC3 core consists of VersaTiles, which have been enhanced beyond the ProASIC<sup>PLUS®</sup> core tiles. The ProASIC3 VersaTile supports the following:

- All 3-input logic functions—LUT-3 equivalent
- Latch with clear or set
- D-flip-flop with clear or set
- Enable D-flip-flop with clear or set

Refer to [Figure 1-3](#) for VersaTile configurations.

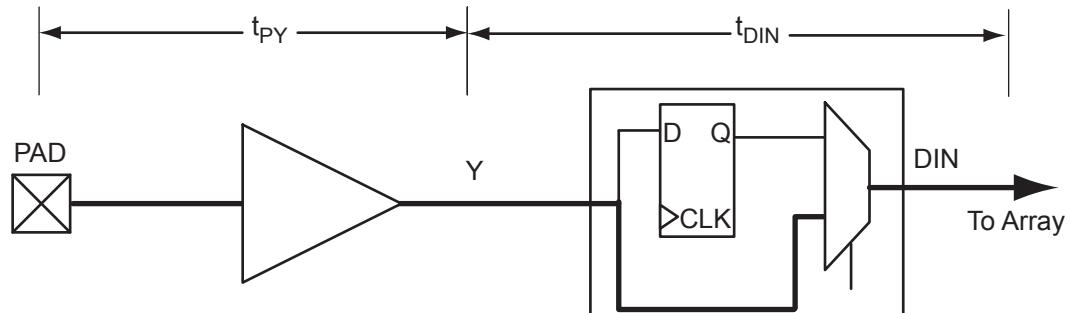

**Figure 1-3 • VersaTile Configurations**

## Power Consumption of Various Internal Resources

**Table 2-14 • Different Components Contributing to Dynamic Power Consumption in ProASIC3 Devices**

<b>Parameter</b>	<b>Definition</b>	<b>Device Specific Dynamic Contributions (µW/MHz)</b>							
		A3P1000	A3P600	A3P400	A3P250	A3P125	A3P060	A3P030	A3P015
PAC1	Clock contribution of a Global Rib	14.50	12.80	12.80	11.00	11.00	9.30	9.30	9.30
PAC2	Clock contribution of a Global Spine	2.48	1.85	1.35	1.58	0.81	0.81	0.41	0.41
PAC3	Clock contribution of a VersaTile row					0.81			
PAC4	Clock contribution of a VersaTile used as a sequential module					0.12			
PAC5	First contribution of a VersaTile used as a sequential module					0.07			
PAC6	Second contribution of a VersaTile used as a sequential module					0.29			
PAC7	Contribution of a VersaTile used as a combinatorial Module					0.29			
PAC8	Average contribution of a routing net					0.70			
PAC9	Contribution of an I/O input pin (standard dependent)					See Table 2-8 on page 2-7 through Table 2-10 on page 2-8.			
PAC10	Contribution of an I/O output pin (standard dependent)					See Table 2-11 on page 2-9 through Table 2-13 on page 2-10.			
PAC11	Average contribution of a RAM block during a read operation					25.00			
PAC12	Average contribution of a RAM block during a write operation					30.00			
PAC13	Dynamic contribution for PLL					2.60			

**Note:** \*For a different output load, drive strength, or slew rate, Microsemi recommends using the Microsemi Power spreadsheet calculator or SmartPower tool in Libero SoC software.

$$t_{PY} = \text{MAX}(t_{PY}(R), t_{PY}(F))$$

$$t_{DIN} = \text{MAX}(t_{DIN}(R), t_{DIN}(F))$$

I/O Interface

**Notes:**

1. The minimum drive strength for any LVCMOS 3.3 V software configuration when run in wide range is ±100 µA. Drive strength displayed in the software is supported for normal range only. For a detailed I/V curve, refer to the IBIS models.
2. All LVCMOS 3.3 V software macros support LVCMOS 3.3 V wide range as specified in the JESD8-B specification.
3. For specific junction temperature and voltage supply levels, refer to [Table 2-6 on page 2-6](#) for derating values.
4. Resistance is used to measure I/O propagation delays as defined in PCI specifications. See [Figure 2-11 on page 2-64](#) for connectivity. This resistor is not required during normal operation.

## 2.5 V LVC MOS

Low-Voltage CMOS for 2.5 V is an extension of the LVC MOS standard (JESD8-5) used for general-purpose 2.5 V applications.

**Table 2-56 • Minimum and Maximum DC Input and Output Levels  
Applicable to Advanced I/O Banks**

2.5 V LVC MOS	VIL		VIH		VOL	VOH	IOL	IOH	IOSL	IOSH	IIL <sup>1</sup>	IIH <sup>2</sup>

$t_{ORECPRE}$	Asynchronous Preset Recovery Time for the Output Data Register	0.22	0.25	0.30	ns
$t_{OWCLR}$	Asynchronous Clear Minimum Pulse Width for the Output Data Register	0.22	0.25	0.30	ns
$t_{OWPRE}$	Asynchronous Preset Minimum Pulse Width for the Output Data Register	0.22	0.25	0.30	ns
$t_{OCKMPWH}$	Clock Minimum Pulse Width High for the Output Data Register	0.36	0.41	0.48	ns
$t_{OCKMPWL}$	Clock Minimum Pulse Width Low for the Output Data Register	0.32	0.37	0.43	ns

*Note:* For specific junction temperature and voltage supply levels, refer to Table 2-6 on page 2-6 for derating values.

## DDR Module Specifications

### Input DDR Module

**Figure 2-20 • Input DDR Timing Model**

**Table 2-101 • Parameter Definitions**

Parameter Name	Parameter Definition	Measuring Nodes (from, to)
$t_{DDRICLKQ1}$	Clock-to-Out Out_QR	B, D
$t_{DDRICLKQ2}$	Clock-to-Out Out_QF	B, E
$t_{DDRISUD}$	Data Setup Time of DDR input	A, B
$t_{DDRIHD}$	Data Hold Time of DDR input	A, B
$t_{DDRICLR2Q1}$	Clear-to-Out Out_QR	C, D
$t_{DDRICLR2Q2}$	Clear-to-Out Out_QF	C, E
$t_{DDRIREMCLR}$	Clear Removal	C, B
$t_{DDIRECCLR}$	Clear Recovery	C, B

## Timing Characteristics

**Table 2-105 • Combinatorial Cell Propagation Delays**

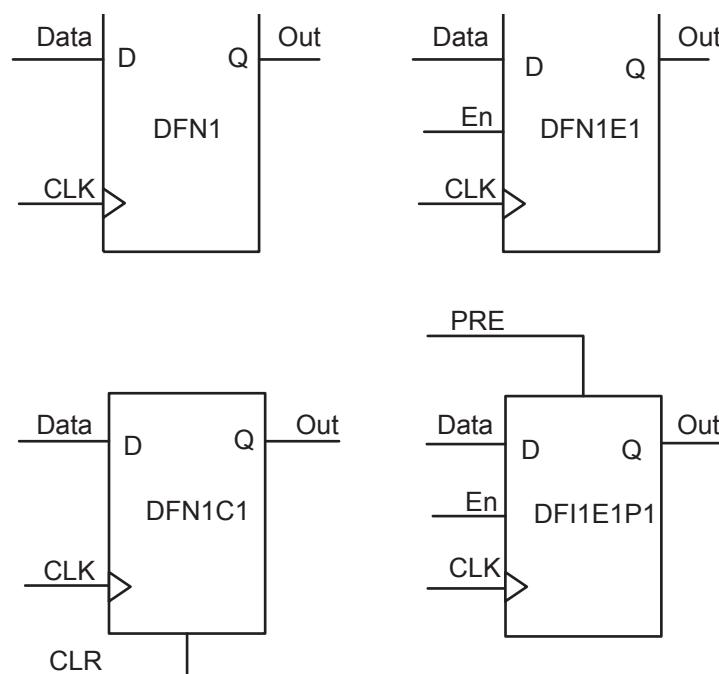

Commercial-Case Conditions:  $T_J = 70^\circ\text{C}$ , Worst-Case VCC = 1.425 V

Combinatorial Cell	Equation	Parameter	-2	-1	Std.	Units
INV	$Y = !A$	$t_{PD}$	0.40	0.46	0.54	ns
AND2	$Y = A \cdot B$	$t_{PD}$	0.47	0.54	0.63	ns
NAND2	$Y = !(A \cdot B)$	$t_{PD}$	0.47	0.54	0.63	ns
OR2	$Y = A + B$	$t_{PD}$	0.49	0.55	0.65	ns
NOR2	$Y = !(A + B)$	$t_{PD}$	0.49	0.55	0.65	ns
XOR2	$Y = A \oplus B$	$t_{PD}$	0.74	0.84	0.99	ns
MAJ3	$Y = \text{MAJ}(A, B, C)$	$t_{PD}$	0.70	0.79	0.93	ns
XOR3	$Y = A \oplus B \oplus C$	$t_{PD}$	0.87	1.00	1.17	ns
MUX2	$Y = A \text{ IS} + B \text{ S}$	$t_{PD}$	0.51	0.58	0.68	ns
AND3	$Y = A \cdot B \cdot C$	$t_{PD}$	0.56	0.64	0.75	ns

Note: For specific junction temperature and voltage supply levels, refer to [Table 2-6 on page 2-6](#) for derating values.

## VersaTile Specifications as a Sequential Module

The ProASIC3 library offers a wide variety of sequential cells, including flip-flops and latches. Each has a data input and optional enable, clear, or preset. In this section, timing characteristics are presented for a representative sample from the library. For more details, refer to the [Fusion, IGLOO/e, and ProASIC3/E Macro Library Guide](#).

**Figure 2-26 • Sample of Sequential Cells**

---

## 3 – Pin Descriptions

---

### Supply Pins

**GND****Ground**

Ground supply voltage to the core, I/O outputs, and I/O logic.

**GNDQ****Ground (quiet)**

Quiet ground supply voltage to input buffers of I/O banks. Within the package, the GNDQ plane is decoupled from the simultaneous switching noise originated from the output buffer ground domain. This minimizes the noise transfer within the package and improves input signal integrity. GNDQ must always be connected to GND on the board.

**VCC****Core Supply Voltage**

Supply voltage to the FPGA core, nominally 1.5 V. VCC is required for powering the JTAG state machine in addition to VJTAG. Even when a device is in bypass mode in a JTAG chain of interconnected devices, both VCC and VJTAG must remain powered to allow JTAG signals to pass through the device.

**VCCI<sub>Bx</sub>****I/O Supply Voltage**

Supply voltage to the bank's I/O output buffers and I/O logic. Bx is the I/O bank number. There are up to eight I/O banks on low power flash devices plus a dedicated VJTAG bank. Each bank can have a separate VCCI connection. All I/Os in a bank will run off the same VCCI<sub>Bx</sub> supply. VCCI can be 1.5 V, 1.8 V, 2.5 V, or 3.3 V, nominal voltage. In general, unused I/O banks should have their corresponding VCCI<sub>X</sub> pins tied to GND. If an output pad is terminated to ground through any resistor and if the corresponding VCCI<sub>X</sub> is left floating, then the leakage current to ground is ~ 0uA. However, if an output pad is terminated to ground through any resistor and the corresponding VCCI<sub>X</sub> grounded, then the leakage current to ground is ~ 3 uA. For unused banks the aforementioned behavior is to be taken into account while deciding if it's better to float VCCI<sub>X</sub> of unused bank or tie it to GND.

**VMV<sub>x</sub>****I/O Supply Voltage (quiet)**

Quiet supply voltage to the input buffers of each I/O bank. x is the bank number. Within the package, the VMV plane biases the input stage of the I/Os in the I/O banks. This minimizes the noise transfer within the package and improves input signal integrity. Each bank must have at least one VMV connection, and no VMV should be left unconnected. All I/Os in a bank run off the same VMV<sub>x</sub> supply. VMV is used to provide a quiet supply voltage to the input buffers of each I/O bank. VMV<sub>x</sub> can be 1.5 V, 1.8 V, 2.5 V, or 3.3 V, nominal voltage. Unused I/O banks should have their corresponding VMV pins tied to GND. VMV and VCCI should be at the same voltage within a given I/O bank. Used VMV pins must be connected to the corresponding VCCI pins of the same bank (i.e., VMV0 to VCCI<sub>B0</sub>, VMV1 to VCCI<sub>B1</sub>, etc.).

**VCCPLA/B/C/D/E/F PLL Supply Voltage**

Supply voltage to analog PLL, nominally 1.5 V.

When the PLLs are not used, the Designer place-and-route tool automatically disables the unused PLLs to lower power consumption. The user should tie unused VCCPLx and VCOMPLx pins to ground. Microsemi recommends tying VCCPLx to VCC and using proper filtering circuits to decouple VCC noise from the PLLs. Refer to the PLL Power Supply Decoupling section of the "Clock Conditioning Circuits in IGLOO and ProASIC3 Devices" chapter of the *ProASIC3 FPGA Fabric User's Guide* for a complete board solution for the PLL analog power supply and ground.

There is one VCCPLF pin on ProASIC3 devices.

**VCOMPLA/B/C/D/E/F PLL Ground**

Ground to analog PLL power supplies. When the PLLs are not used, the Designer place-and-route tool automatically disables the unused PLLs to lower power consumption. The user should tie unused VCCPLx and VCOMPLx pins to ground.

There is one VCOMPLF pin on ProASIC3 devices.

In critical applications, an upset in the JTAG circuit could allow entrance to an undesired JTAG state. In such cases, Microsemi recommends tying off TRST to GND through a resistor placed close to the FPGA pin.

Note that to operate at all VJTAG voltages,  $500\ \Omega$  to  $1\ k\Omega$  will satisfy the requirements.

## Special Function Pins

### NC                  No Connect

This pin is not connected to circuitry within the device. These pins can be driven to any voltage or can be left floating with no effect on the operation of the device.

### DC                  Do Not Connect

This pin should not be connected to any signals on the PCB. These pins should be left unconnected.

The following documents provide packaging information and device selection for low power flash devices.

### Product Catalog

[http://www.microsemi.com/soc/documents/ProdCat\\_PIB.pdf](http://www.microsemi.com/soc/documents/ProdCat_PIB.pdf)

Lists devices currently recommended for new designs and the packages available for each member of the family. Use this document or the datasheet tables to determine the best package for your design, and which package drawing to use.

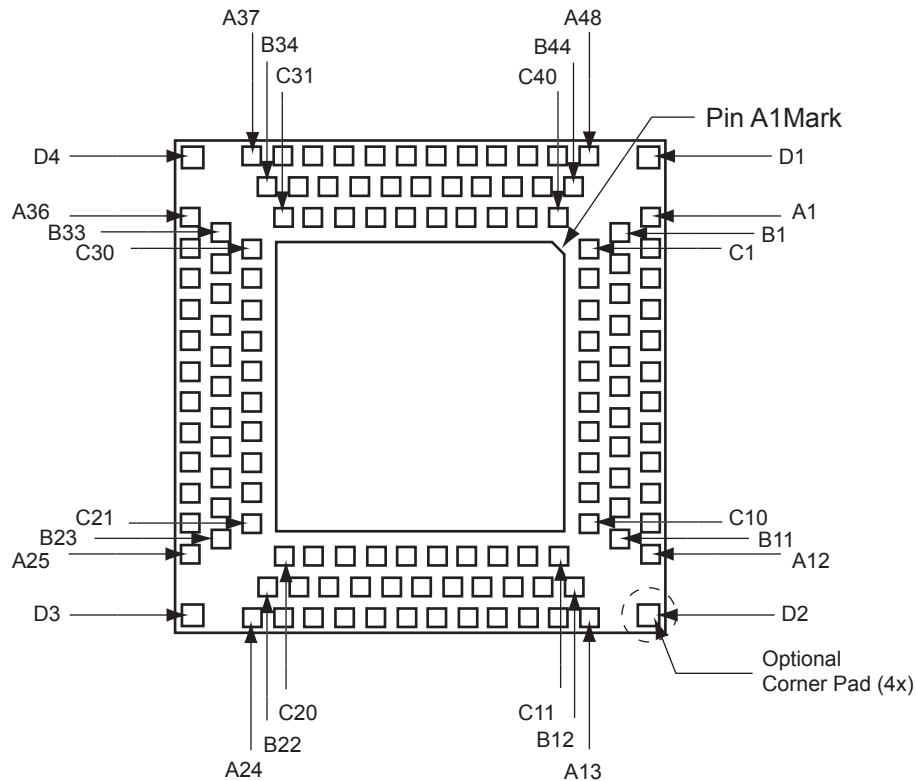

### Package Mechanical Drawings

<http://www.microsemi.com/soc/documents/PckgMechDrwngs.pdf>

This document contains the package mechanical drawings for all packages currently or previously supplied by Actel. Use the bookmarks to navigate to the package mechanical drawings.

Additional packaging materials are at <http://www.microsemi.com/products/solutions/package/docs.aspx>.

## QN132 – Bottom View

### Notes:

1. The die attach paddle center of the package is tied to ground (GND).
2. Option corner pads come with this device and package combination. It is optional to tie them to ground or leave them floating.
3. The QN132 package is discontinued and is not available for ProASIC3 devices.
4. For more information on package drawings, see [PD3068: Package Mechanical Drawings](#).
