Understanding <u>Embedded - FPGAs (Field Programmable Gate Array)</u>

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Note: *For a different output load, drive strength, or slew rate, Microsemi recommends using the Microsemi Power spreadsheet calculator or SmartPower tool in Libero SoC software.

Power Calculation Methodology

This section describes a simplified method to estimate power consumption of an application. For more accurate and detailed power estimations, use the SmartPower tool in Libero SoC software.

The power calculation methodology described below uses the following variables:

- The number of PLLs as well as the number and the frequency of each output clock generated
- · The number of combinatorial and sequential cells used in the design
- · The internal clock frequencies
- · The number and the standard of I/O pins used in the design
- · The number of RAM blocks used in the design
- Toggle rates of I/O pins as well as VersaTiles—guidelines are provided in Table 2-16 on page 2-14.
- Enable rates of output buffers—guidelines are provided for typical applications in Table 2-17 on page 2-14.
- Read rate and write rate to the memory—guidelines are provided for typical applications in Table 2-17 on page 2-14. The calculation should be repeated for each clock domain defined in the design.

Methodology

Total Power Consumption—PTOTAL

 $P_{TOTAL} = P_{STAT} + P_{DYN}$

 $P_{\mbox{\scriptsize STAT}}$ is the total static power consumption.

P_{DYN} is the total dynamic power consumption.

Total Static Power Consumption—P_{STAT}

P_{STAT} = P_{DC1} + N_{INPUTS}* P_{DC2} + N_{OUTPUTS}* P_{DC3}

N_{INPLITS} is the number of I/O input buffers used in the design.

N_{OUTPUTS} is the number of I/O output buffers used in the design.

Total Dynamic Power Consumption—P_{DYN}

PDYN = PCLOCK + PS-CELL + PC-CELL + PNET + PINPUTS + POUTPUTS + PMEMORY + PPLL

Global Clock Contribution—P_{CLOCK}

P_{CLOCK} = (P_{AC1} + N_{SPINE}*P_{AC2} + N_{ROW}*P_{AC3} + N_{S-CELL}* P_{AC4}) * F_{CLK}

N_{SPINE} is the number of global spines used in the user design—guidelines are provided in the "Spine Architecture" section of the Global Resources chapter in the *ProASIC3 FPGA Fabric User's Guide*.

N_{ROW} is the number of VersaTile rows used in the design—guidelines are provided in the "Spine Architecture" section of the Global Resources chapter in the *ProASIC3 FPGA Fabric User's Guide*.

VersaTile Characteristics

VersaTile Specifications as a Combinatorial Module

The ProASIC3 library offers all combinations of LUT-3 combinatorial functions. In this section, timing characteristics are presented for a sample of the library. For more details, refer to the *Fusion, IGLOO®/e, and ProASIC3/E Macro Library Guide*.

Notes:

- 1. The die attach paddle center of the package is tied to ground (GND).
- 2. Option corner pads come with this device and package combination. It is optional to tie them to ground or leave them floating.
- 3. The QN132 package is discontinued and is not available for ProASIC3 devices.
- 4. For more information on package drawings, see PD3068: Package Mechanical Drawings.

| Revision | Changes | Page |
|---------------------------------|--|------------|
| Revision 10 (September 2011) | The "In-System Programming (ISP) and Security" section and Security section were revised to clarify that although no existing security measures can give an absolute guarantee, Microsemi FPGAs implement the best security available in the industry (SAR 32865). | ſ |
| | The value of 34 I/Os for the QN48 package in A3P030 was added to the "I/Os Per Package 1" section (SAR 33907). | III |
| | The Y security option and Licensed DPA Logo were added to the "ProASIC3 Ordering Information" section. The trademarked Licensed DPA Logo identifies that a product is covered by a DPA counter-measures license from Cryptography Research (SAR 32151). | IV |
| | The "Specifying I/O States During Programming" section is new (SAR 21281). | 1-7 |
| | In Table 2-2 • Recommended Operating Conditions 1, VPUMP programming voltage in programming mode was changed from "3.0 to 3.6" to "3.15 to 3.45" (SAR 30666). It was corrected in v2.0 of this datasheet in April 2007 but inadvertently changed back to "3.0 to 3.6 V" in v1.4 in August 2009. The following changes were made to Table 2-2 • Recommended Operating Conditions 1: VCCPLL analog power supply (PLL) was changed from "1.4 to 1.6" to "1.425 to 1.575" (SAR 33850). | 2-2 |
| | For VCCI and VMV, values for 3.3 V DC and 3.3 V DC Wide Range were corrected. The correct value for 3.3 V DC is "3.0 to 3.6 V" and the correct value for 3.3 V Wide Range is "2.7 to 3.6" (SAR 33848). | |
| | Table 2-25 • Summary of I/O Timing Characteristics—Software Default Settings was update to restore values to the correct columns. Previously the Slew Rate column was missing and data were aligned incorrectly (SAR 34034). | 2-24 |
| | The notes regarding drive strength in the "Summary of I/O Timing Characteristics – Default I/O Software Settings" section and "3.3 V LVCMOS Wide Range" section tables were revised for clarification. They now state that the minimum drive strength for the default software configuration when run in wide range is $\pm 100~\mu A$. The drive strength displayed in software is supported in normal range only. For a detailed I/V curve, refer to the IBIS models (SAR 25700). | 2-22, 2-39 |

| | The A3P030 "100-Pin VQFP" table is new. | 4-11 |
| Advance v0.7 (January 2007) | In the "I/Os Per Package" table, the I/O numbers were added for A3P060, A3P125, and A3P250. The A3P030-VQ100 I/O was changed from 79 to 77. | ii |
| Advance v0.6 (April 2006) | The term flow-through was changed to pass-through. | N/A |
| | Table 1 was updated to include the QN132. | ii |
| | The "I/Os Per Package" table was updated with the QN132. The footnotes were also updated. The A3P400-FG144 I/O count was updated. | ii |
| | "Automotive ProASIC3 Ordering Information" was updated with the QN132. | iii |
| | "Temperature Grade Offerings" was updated with the QN132. | iii |
| | B-LVDS and M-LDVS are new I/O standards added to the datasheet. | N/A |
| | The term flow-through was changed to pass-through. | N/A |
| | Figure 2-7 • Efficient Long-Line Resources was updated. | 2-7 |
| | The footnotes in Figure 2-15 • Clock Input Sources Including CLKBUF, CLKBUF_LVDS/LVPECL, and CLKINT were updated. | 2-16 |

Datasheet Categories

Categories

In order to provide the latest information to designers, some datasheet parameters are published before data has been fully characterized from silicon devices. The data provided for a given device, as highlighted in the "ProASIC3 Device Status" table on page IV, is designated as either "Product Brief," "Advance," "Preliminary," or "Production." The definitions of these categories are as follows:

Product Brief

The product brief is a summarized version of a datasheet (advance or production) and contains general product information. This document gives an overview of specific device and family information.

Advance

This version contains initial estimated information based on simulation, other products, devices, or speed grades. This information can be used as estimates, but not for production. This label only applies to the DC and Switching Characteristics chapter of the datasheet and will only be used when the data has not been fully characterized.

Preliminary

The datasheet contains information based on simulation and/or initial characterization. The information is believed to be correct, but changes are possible.

Unmarked (production)

This version contains information that is considered to be final.

Export Administration Regulations (EAR)

The products described in this document are subject to the Export Administration Regulations (EAR). They could require an approved export license prior to export from the United States. An export includes release of product or disclosure of technology to a foreign national inside or outside the United States.

Safety Critical, Life Support, and High-Reliability Applications Policy

The products described in this advance status document may not have completed the Microsemi qualification process. Products may be amended or enhanced during the product introduction and qualification process, resulting in changes in device functionality or performance. It is the responsibility of each customer to ensure the fitness of any product (but especially a new product) for a particular purpose, including appropriateness for safety-critical, life-support, and other high-reliability applications. Consult the Microsemi SoC Products Group Terms and Conditions for specific liability exclusions relating to life-support applications. A reliability report covering all of the SoC Products Group's products is available at http://www.microsemi.com/soc/documents/ORT_Report.pdf. Microsemi also offers a variety of enhanced qualification and lot acceptance screening procedures. Contact your local sales office for additional reliability information.
