
Welcome to E-XFL.COM

Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details	
Product Status	Active
Number of LABs/CLBs	-
Number of Logic Elements/Cells	-
Total RAM Bits	147456
Number of I/O	97
Number of Gates	1000000
Voltage - Supply	1.425V ~ 1.575V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	144-LBGA
Supplier Device Package	144-FPBGA (13x13)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/m7a3p1000-2fgg144i

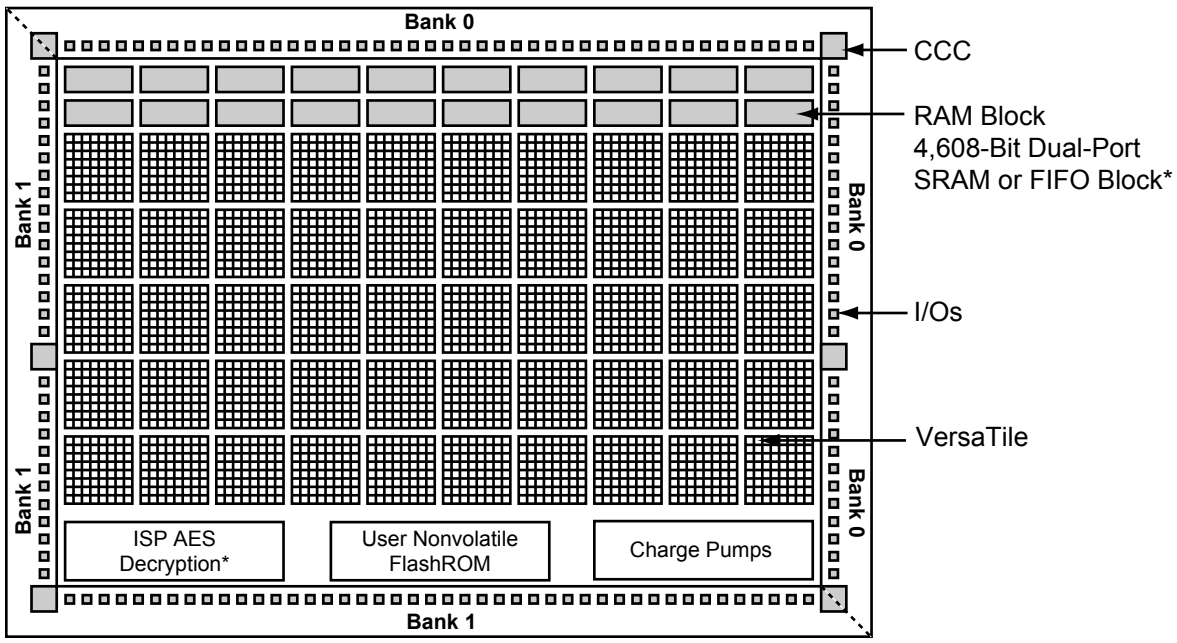
Advanced Flash Technology

The ProASIC3 family offers many benefits, including nonvolatility and reprogrammability through an advanced flash-based, 130-nm LVCMOS process with seven layers of metal. Standard CMOS design techniques are used to implement logic and control functions. The combination of fine granularity, enhanced flexible routing resources, and abundant flash switches allows for very high logic utilization without compromising device routability or performance. Logic functions within the device are interconnected through a four-level routing hierarchy.

Advanced Architecture

The proprietary ProASIC3 architecture provides granularity comparable to standard-cell ASICs. The ProASIC3 device consists of five distinct and programmable architectural features (Figure 1-1 and Figure 1-2 on page 1-4):

- FPGA VersaTiles
- Dedicated FlashROM
- Dedicated SRAM/FIFO memory†
- Extensive CCCs and PLLs†
- Advanced I/O structure



*Note: *Not supported by A3P015 and A3P030 devices*

Figure 1-1 • **ProASIC3 Device Architecture Overview with Two I/O Banks (A3P015, A3P030, A3P060, and A3P125)**

† *The A3P015 and A3P030 do not support PLL or SRAM.*

2 – ProASIC3 DC and Switching Characteristics

General Specifications

Operating Conditions

Stresses beyond those listed in Table 2-1 may cause permanent damage to the device.

Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Absolute Maximum Ratings are stress ratings only; functional operation of the device at these or any other conditions beyond those listed under the Recommended Operating Conditions specified in Table 2-2 on page 2-2 is not implied.

Table 2-1 • **Absolute Maximum Ratings**

Symbol	Parameter	Limits	Units
VCC	DC core supply voltage	–0.3 to 1.65	V
VJTAG	JTAG DC voltage	–0.3 to 3.75	V
VPUMP	Programming voltage	–0.3 to 3.75	V
VCCPLL	Analog power supply (PLL)	–0.3 to 1.65	V
VCCI	DC I/O output buffer supply voltage	–0.3 to 3.75	V
VMV	DC I/O input buffer supply voltage	–0.3 to 3.75	V
VI	I/O input voltage	–0.3 V to 3.6 V (when I/O hot insertion mode is enabled) –0.3 V to (VCCI + 1 V) or 3.6 V, whichever voltage is lower (when I/O hot-insertion mode is disabled)	V
T_{STG} [2]	Storage temperature	–65 to +150	°C
T_J [2]	Junction temperature	+125	°C

Notes:

1. *The device should be operated within the limits specified by the datasheet. During transitions, the input signal may undershoot or overshoot according to the limits shown in Table 2-4 on page 2-3.*
2. *VMV pins must be connected to the corresponding VCCI pins. See the "VMVx I/O Supply Voltage (quiet)" section on page 3-1 for further information.*
3. *For flash programming and retention maximum limits, refer to Table 2-3 on page 2-3, and for recommended operating limits, refer to Table 2-2 on page 2-2.*

Calculating Power Dissipation

Quiescent Supply Current

Table 2-7 • Quiescent Supply Current Characteristics

	A3P015	A3P030	A3P060	A3P125	A3P250	A3P400	A3P600	A3P1000
Typical (25°C)	2 mA	2 mA	2 mA	2 mA	3 mA	3 mA	5 mA	8 mA
Max. (Commercial)	10 mA	10 mA	10 mA	10 mA	20 mA	20 mA	30 mA	50 mA
Max. (Industrial)	15 mA	15 mA	15 mA	15 mA	30 mA	30 mA	45 mA	75 mA

Note: IDD Includes VCC, VPUMP, VCCI, and VMV currents. Values do not include I/O static contribution, which is shown in Table 2-11 and Table 2-12 on page 2-9.

Power per I/O Pin

Table 2-8 • Summary of I/O Input Buffer Power (Per Pin) – Default I/O Software Settings Applicable to Advanced I/O Banks

	VMV (V)	Static Power P_{DC2} (mW) [1]	Dynamic Power PAC9 (µW/MHz) [2]
Single-Ended			
3.3 V LVTTL / 3.3 V LVCMOS	3.3	–	16.22
3.3 V LVCMOS Wide Range[3]	3.3	–	16.22
2.5 V LVCMOS	2.5	–	5.12
1.8 V LVCMOS	1.8	–	2.13
1.5 V LVCMOS (JESD8-11)	1.5	–	1.45
3.3 V PCI	3.3	–	18.11
3.3 V PCI-X	3.3	–	18.11

Note: For specific junction temperature and voltage-supply levels, refer to Table 2-6 on page 2-6 for derating values.

VJTAG JTAG Supply Voltage

Low power flash devices have a separate bank for the dedicated JTAG pins. The JTAG pins can be run at any voltage from 1.5 V to 3.3 V (nominal). Isolating the JTAG power supply in a separate I/O bank gives greater flexibility in supply selection and simplifies power supply and PCB design.

If the JTAG interface is neither used nor planned for use, the VJTAG pin together with the TRST pin could be tied to GND.

It should be noted that VCC is required to be powered for JTAG operation; VJTAG alone is insufficient. If a device is in a JTAG chain of interconnected boards, the board containing the device can be powered down, provided both VJTAG and VCC to the part remain powered; otherwise, JTAG signals will not be able to transition the device, even in bypass mode.

Microsemi recommends that VPUMP and VJTAG power supplies be kept separate with independent filtering capacitors rather than supplying them from a common rail.

VPUMP Programming Supply Voltage

ProASIC3 devices support single-voltage ISP of the configuration flash and FlashROM. For programming, VPUMP should be 3.3 V nominal. During normal device operation, VPUMP can be left floating or can be tied (pulled up) to any voltage between 0 V and the VPUMP maximum. Programming power supply voltage (VPUMP) range is listed in Table 2-2 on page 2-2.

When the VPUMP pin is tied to ground, it will shut off the charge pump circuitry, resulting in no sources of oscillation from the charge pump circuitry.

For proper programming, 0.01 µF and 0.33 µF capacitors (both rated at 16 V) are to be connected in parallel across VPUMP and GND, and positioned as close to the FPGA pins as possible.

Microsemi recommends that VPUMP and VJTAG power supplies be kept separate with independent filtering capacitors rather than supplying them from a common rail.

User Pins

I/O User Input/Output

The I/O pin functions as an input, output, tristate, or bidirectional buffer. Input and output signal levels are compatible with the I/O standard selected.

During programming, I/Os become tristated and weakly pulled up to V_{CCI}. With V_{CCI}, VMV, and V_{CC} supplies continuously powered up, when the device transitions from programming to operating mode, the I/Os are instantly configured to the desired user configuration.

Unused I/Os are configured as follows:

- Output buffer is disabled (with tristate value of high impedance)
- Input buffer is disabled (with tristate value of high impedance)
- Weak pull-up is programmed

GL Globals

GL I/Os have access to certain clock conditioning circuitry (and the PLL) and/or have direct access to the global network (spines). Additionally, the global I/Os can be used as regular I/Os, since they have identical capabilities. Unused GL pins are configured as inputs with pull-up resistors.

See more detailed descriptions of global I/O connectivity in the "Clock Conditioning Circuits in IGLOO and ProASIC3 Devices" chapter of the *ProASIC3 FPGA Fabric User's Guide*. All inputs labeled GC/GF are direct inputs into the quadrant clocks. For example, if GAA0 is used for an input, GAA1 and GAA2 are no longer available for input to the quadrant globals. All inputs labeled GC/GF are direct inputs into the chip-level globals, and the rest are connected to the quadrant globals. The inputs to the global network are multiplexed, and only one input can be used as a global input.

Refer to the I/O Structure section of the handbook for the device you are using for an explanation of the naming of global pins.

FF Flash*Freeze Mode Activation Pin

Flash*Freeze is available on IGLOO, ProASIC3L, and RT ProASIC3 devices. It is not supported on ProASIC3/E devices. The FF pin is a dedicated input pin used to enter and exit Flash*Freeze mode. The FF pin is active-low, has the same characteristics as a single-ended I/O, and must meet the maximum rise and fall times. When Flash*Freeze

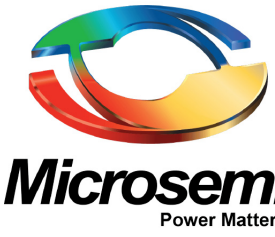
5 – Datasheet Information

List of Changes

The following table lists critical changes that were made in each version of the ProASIC3 datasheet.

Revision	Changes	Page
Revision 18 (March 2016)	Updated 3.3 V DC supply voltage's maximum Commercial and Industrial values from 3.3 V to 3.6 V in Table 2-2 (SAR 72693).	2-2
	Added reference of Package Mechanical Drawings document in all package pin assignment notes (76833).	NA
Revision 17 (June 2015)	Removed PQFP embedded heat spreader info. from Table 2-5 (SAR 52320).	2-6
	Updated "VCCIBx I/O Supply Voltage" (SAR 43323).	3-1
Revision 16 (December 2014)	Updated "ProASIC3 Ordering Information". Interchanged the positions of Y- Security Feature and I- Application (Temperature Range) (SAR 61079). Added Note "Only devices with package size greater than or equal to 5x5 are supported".	1-IV
	Updated Table Note (2) in Table 2-3 • Flash Programming Limits – Retention, Storage and Operating Temperature so that the Table Note is not applicable for Maximum Storage Temperature T_{STG} (SAR 54297).	2-3
	Added values for Drive strength 2 mA in Table 2-41 • 3.3 V LVTTL / 3.3 V LVCMOS High Slew, Table 2-42 • 3.3 V LVTTL / 3.3 V LVCMOS Low Slew, Table 2-43 • 3.3 V LVTTL / 3.3 V LVCMOS High Slew, and Table 2-44 • 3.3 V LVTTL / 3.3 V LVCMOS Low Slew (SAR 57184).	2-34, 2-35, 2-36, 2-37
	Added Figure 2-1 • High-Temperature Data Retention (HTR) (SAR 45466).	2-3
	Updates made to maintain the style and consistency of the document.	NA
Revision 15 (July 2014)	Added corner pad table note (3) to "QN132 – Bottom View" (SAR 47442).	4-6
	Ambient temperature removed in Table 2-2, table notes and "ProASIC3 Ordering Information" figure were modified (SAR 48343).	2-2 1-IV
	Other updates were made to maintain the style and consistency of the datasheet.	NA
Revision 14 (April 2014)	Note added for the discontinuance of QN132 package to the following tables and section: "ProASIC3 Devices", "I/Os Per Package 1", "ProASIC3 FPGAs Package Sizes Dimensions" and "QN132 – Bottom View" section (SAR 55118).	I, III, 4-6

Revision	Changes	Page
v2.0 (April 2007)	In the "Packaging Tables", Ambient was deleted.	ii
	The timing characteristics tables were updated.	N/A
	The "PLL Macro" section was updated to add information on the VCO and PLL outputs during power-up.	2-15
	The "PLL Macro" section was updated to include power-up information.	2-15
	Table 2-11 • ProASIC3 CCC/PLL Specification was updated.	2-29
	Figure 2-19 • Peak-to-Peak Jitter Definition is new.	2-18
	The "SRAM and FIFO" section was updated with operation and timing requirement information.	2-21
	The "RESET" section was updated with read and write information.	2-25
	The "RESET" section was updated with read and write information.	2-25
	The "Introduction" in the "Advanced I/Os" section was updated to include information on input and output buffers being disabled.	2-28
	PCI-X 3.3 V was added to Table 2-11 • VCCI Voltages and Compatible Standards.	2-29
	In the Table 2-15 • Levels of Hot-Swap Support, the ProASIC3 compliance descriptions were updated for levels 3 and 4.	2-34
	Table 2-43 • I/O Hot-Swap and 5 V Input Tolerance Capabilities in ProASIC3 Devices was updated.	2-64
	Notes 3, 4, and 5 were added to Table 2-17 • Comparison Table for 5 V–Compliant Receiver Scheme. 5 x 52.72 was changed to 52.7 and the Maximum current was updated from 4 x 52.7 to 5 x 52.7.	2-40
	The "VCCPLF PLL Supply Voltage" section was updated.	2-50
	The "VPUMP Programming Supply Voltage" section was updated.	2-50
	The "GL Globals" section was updated to include information about direct input into quadrant clocks.	2-51
	V_{JTAG} was deleted from the "TCK Test Clock" section.	2-51
	In Table 2-22 • Recommended Tie-Off Values for the TCK and TRST Pins, TSK was changed to TCK in note 2. Note 3 was also updated.	2-51
	Ambient was deleted from Table 3-2 • Recommended Operating Conditions. VPUMP programming mode was changed from "3.0 to 3.6" to "3.15 to 3.45".	3-2
	Note 3 is new in Table 3-4 • Overshoot and Undershoot Limits (as measured on quiet I/Os)1.	3-2
	In EQ 3-2, 150 was changed to 110 and the result changed from 3.9 to 1.951.	3-5
	Table 3-6 • Temperature and Voltage Derating Factors for Timing Delays was updated.	3-6
	Table 3-5 • Package Thermal Resistivities was updated.	3-5
	Table 3-14 • Summary of Maximum and Minimum DC Input and Output Levels Applicable to Commercial and Industrial Conditions—Software Default Settings (Advanced) and Table 3-17 • Summary of Maximum and Minimum DC Input Levels Applicable to Commercial and Industrial Conditions (Standard Plus) were updated.	3-17 to 3-17



Microsemi Corporation (MSCC) offers a comprehensive portfolio of semiconductor and system solutions for communications, defense and security, aerospace, and industrial markets. Products include high-performance and radiation-hardened analog mixed-signal integrated circuits, FPGAs, SoCs, and ASICs; power management products; timing and synchronization devices and precise time solutions, setting the world's standard for time; voice processing devices; RF solutions; discrete components; enterprise storage and communication solutions, security technologies and scalable anti-tamper products; Ethernet Solutions; Power-over-Ethernet ICs and midspans; as well as custom design capabilities and services. Microsemi is headquartered in Aliso Viejo, Calif. and has approximately 4,800 employees globally. Learn more at **www.microsemi.com**.
