Infineon Technologies - MB90F548GLSPMC-GSE1 Datasheet

Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Obsolete
Core Processor	F²MC-16LX
Core Size	16-Bit
Speed	16MHz
Connectivity	CANbus, EBI/EMI, SCI, Serial I/O, UART/USART
Peripherals	POR, WDT
Number of I/O	81
Program Memory Size	128KB (128K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	4K x 8
Voltage - Supply (Vcc/Vdd)	4.5V ~ 5.5V
Data Converters	A/D 8x8/10b
Oscillator Type	External
Operating Temperature	-40°C ~ 105°C (TA)
Mounting Type	Surface Mount
Package / Case	100-LQFP
Supplier Device Package	100-LQFP (14x14)
Purchase URL	https://www.e-xfl.com/product-detail/infineon-technologies/mb90f548glspmc-gse1

Features	MB90F543G (S) /F548G (S) MB90F549G (S) /F546G (S) MB90F548GL(S)	MB90543G (S) MB90547G (S) MB90548G (S) MB90549G (S)	MB90V540G
16-bit Reload Timer (2 channels)	Operation clock frequency : fsys/2^1, fsys/2^3, fsys/2^5 (fsys = System clock frequency) Supports External Event Count function Signals an interrupt when overflow		
16-bit Free-run Timer	Supports Timer Clear when a match with Output Compare (Channel 0) Operation clock freq. : fsys/2^2, fsys/2^4, fsys/2^6, fsys/2^8 (fsys = System clock freq.)		
16-bit Output Compare (4 channels)	Signals an interrupt when a match with 16-bit Free-run Timer Four 16-bit compare registers A pair of compare registers can be used to generate an output signal		
16-bit Input Capture (8 channels)	Rising edge, falling edge or rising & falling edge sensitive Four 16-bit Capture registers Signals an interrupt upon external event		
8/16-bit Programmable Pulse Generator (4 channels)	Supports 8-bit and 16-bit operation modes Eight 8-bit reload counters Eight 8-bit reload registers for L pulse width Eight 8-bit reload registers for H pulse width A pair of 8-bit reload counters can be configured as one 16-bit reload counter or as 8-bit prescaler plus 8-bit reload counter 4 output pins Operation clock freq. : fsys, fsys/2^1, fsys/2^2, fsys/2^3, fsys/2^4 or 128 µs@fosc = 4 MHz (fsys = System clock frequency, fosc = Oscillation clock frequency)		
CAN Interface MB90540G series : 2 channels MB90545G series : 1 channel	Conforms to CAN Specification Version 2.0 Part A and B Automatic re-transmission in case of error Automatic transmission responding to Remote Frame Prioritized 16 massage buffers for data and ID's supports multipe massages Flexible configuration of acceptance filtering : Full bit compare/Full bit mask/Two partial bit masks Supports up to 1 Mbps		
32 kHz Sub-clock	Sub-clock for low power operation		
External Interrupt (8 channels)	Can be programmed edge sensitive or level sensitive		
External bus interface	External access using the selectable 8-bit or 16-bit bus is enabled (external bus mode.)		
I/O Ports	Virtually all external pins can be used as general purpose I/O All push-pull outputs and schmitt trigger inputs Bit-wise programmable as input/output or peripheral signal Sub-clock for 32 kHz Sub clock low power operation		
Flash Memory	Supports automatic programming, Embeded Algorithm Write/Erase/Erase-Suspend/Erase-Resume commands A flag indicating completion of the algorithm Number of erase cycles : 10,000 times Data retention time : 10 years Boot block configuration Erase can be performed on each block Block protection by externally programmed voltage		

*1 : If the one clock system is used, equip X0A and X1A with clocks from the tool side.

Pin No.		Pin name	Circuit type	Function
LQFP*2	QFP*1			
20	22	P44	G	General I/O port. This function is enabled when UART1 disables the clock output.
		SCK1		Serial clock pulse I/O pin for UART1. This function is enabled when UART1 enables the serial clock output.
22	24	P45	G	General I/O port. This function is enabled when UART1 disables the serial data output.
		SOT1		Serial data output pin for UART1. This function is enabled when UART1 enables the serial data output.
23	25	P46	G	General I/O port. This function is enabled when the Extended I/O serial interface disables the serial data output.
		SOT2		Serial data output pin for the Extended I/O serial interface. This function is enabled when the Extended I/O serial interface enables the serial data output.
24	26	P47	G	General I/O port. This function is enabled when the Extended I/O serial interface disables the clock output.
		SCK2		Serial clock pulse I/O pin for the Extended I/O serial interface . This function is enabled when the Extended I/O serial interface enables the Serial clock output.
26	28	P50	D	General I/O port. This function is always enabled.
		SIN2		Serial data input pin for the Extended I/O serial interface . Set the corresponding Port Direction Register to input if this function is used.
27 to 30	29 to 32	P51 to P54	D	General I/O port. This function is always enabled.
		INT4 to INT7		External interrupt request input pins for INT4 to INT7. Set the corresponding Port Direction Register to input if this function is used.
31	33	P55	D	General I/O port. This function is always enabled.
		ADTG		Trigger input pin for the A/D converter. Set the corresponding Port Direction Register to input if this function is used.
36 to 39	38 to 41	P60 to P63	E	General I/O port. This function is enabled when the analog input enable register specifies a port.
		AN0 to AN3		Analog input pins for the 8/10-bit A/D converter. This function is enabled when the analog input enable register specifies A/D.
41 to 44	43 to 46	P64 to P67	E	General I/O port. The function is enabled when the analog input enable register specifies a port.
		AN4 to AN7		Analog input pins for the 8/10-bit A/D converter. This function is enabled when the analog input enable register specifies A/D.
45	47	P56	D	General I/O port. This function is always enabled.
		TIN0		Event input pin for the 16-bit reload timers 0. Set the corresponding Port Direction Register to input if this function is used.

(Continued)

Pin No.		Pin name	Circuit type	Function
LQFP*2	QFP*1			
46	48	P57	D	General I/O port. This function is enabled when the 16-bit reload timers 0 disables the output.
		TOT0		Output pin for the 16-bit reload timers 0. This function is enabled when the 16-bit reload timers 0 enables the output.
51 to 56	53 to 58	P70 to P75	D	General I/O ports. This function is always enabled.
		IN0 to IN5		Trigger input pins for input captures ICU0 to ICU5. Set the corresponding Port Direction Register to input if this function is used.
57 , 58	59 , 60	P76 , P77	D	General I/O ports. This function is enabled when the OCU disables the waveform output.
		OUT2 , OUT3		Event output pins for output compares OCU2 and OCU3. This function is enabled when the OCU enables the waveform output.
		IN6 , IN7		Trigger input pins for input captures ICU6 and ICU7. Set the corresponding Port Direction Register to input and disable the OCU waveform output if this function is used.
59 to 62	61 to 64	P80 to P83	D	General I/O ports. This function is enabled when 8/16-bit PPG disables the waveform output.
		PPG0 to PPG3		Output pins for 8/16-bit PPGs. This function is enabled when 8/16-bit PPG enables the waveform output.
63 , 64	65 , 66	P84 , P85	D	General I/O ports. This function is enabled when the OCU disables the waveform output.
		OUT0 , OUT1		Waveform output pins for output compares OCU0 and OCU1. This function is enabled when the OCU enables the waveform output.
65	67	P86	D	General I/O port. This function is always enabled.
		TIN1		Input pin for the 16-bit reload timers 1. Set the corresponding Port Direction Register to input if this function is used.
66	68	P87	D	General I/O port. This function is enabled when the 16-bit reload timers 1 disables the output.
		TOT1		Output pin for the 16-bit reload timers 1.This function is enabled when the 16-bit reload timers 1 enables the output.
67 to 70	69 to 72	P90 to P93	D	General I/O port. This function is always enabled.
		INT0 to INT3		External interrupt request input pins for INT0 to INT3. Set the corresponding Port Direction Register to input if this function is used.
71	73	P94	D	General I/O port. This function is enabled when CAN0 disables the output.
		TX0		TX output pin for CAN0. This function is enabled when CAN0 enables the output.

(Continued)

Circuit type	Diagram	Remarks
E		■ CMOS level output ■ CMOS Hysteresis input ■ Analog input
F		■ CMOS Hysteresis input ■ Pull-down Resistor : 50 kΩ approx. (except Flash devices)
G		■ CMOS level output ■ CMOS Hysteresis input ■ TTL level input (Flash devices in Flash writer mode only)

(Continued)

(6) Pull-up/down resistors

The MB90540G/545G Series does not support internal pull-up/down resistors (except Port0 − Port3 : pull-up resistors) . Use external components where needed.

(7) Crystal Oscillator Circuit

Noises around X0 or X1 pins may be possible causes of abnormal operations. Make sure to provide bypass capacitors via the shortest distances from X0, X1 pins, crystal oscillator (or ceramic resonator) and ground lines, and make sure, to the utmost effort, that lines of oscillation circuits do not cross the lines of other circuits.

It is highly recommended to provide a printed circuit board artwork surrounding X0 and X1 pins with a ground area for stabilizing the operation.

(8) Turning-on Sequence of Power Supply to A/D Converter and Analog Inputs

Make sure to turn on the A/D converter power supply (AV_{CC}, AVRH, AVRL) and analog inputs (AN0 to AN7) after turning-on the digital power supply (V_{CC}) .

Turn-off the digital power after turning off the A/D converter supply and analog inputs. In this case, make sure that the voltage does not exceed AVRH or AV_{CC} (turning on/off the analog and digital power supplies simultaneously is acceptable) .

(9) Connection of Unused Pins of A/D Converter

Connect unused pins of A/D converter to $AV_{CC} = V_{CC}$, $AV_{SS} = AVRH = V_{SS}$.

(10) N.C. Pin

The N.C. (internally connected) pin must be opened for use.

(11) Notes on Energization

To prevent the internal regulator circuit from malfunctioning, set the voltage rise time during energization at 50 μs or more (0.2 V to 2.7 V) .

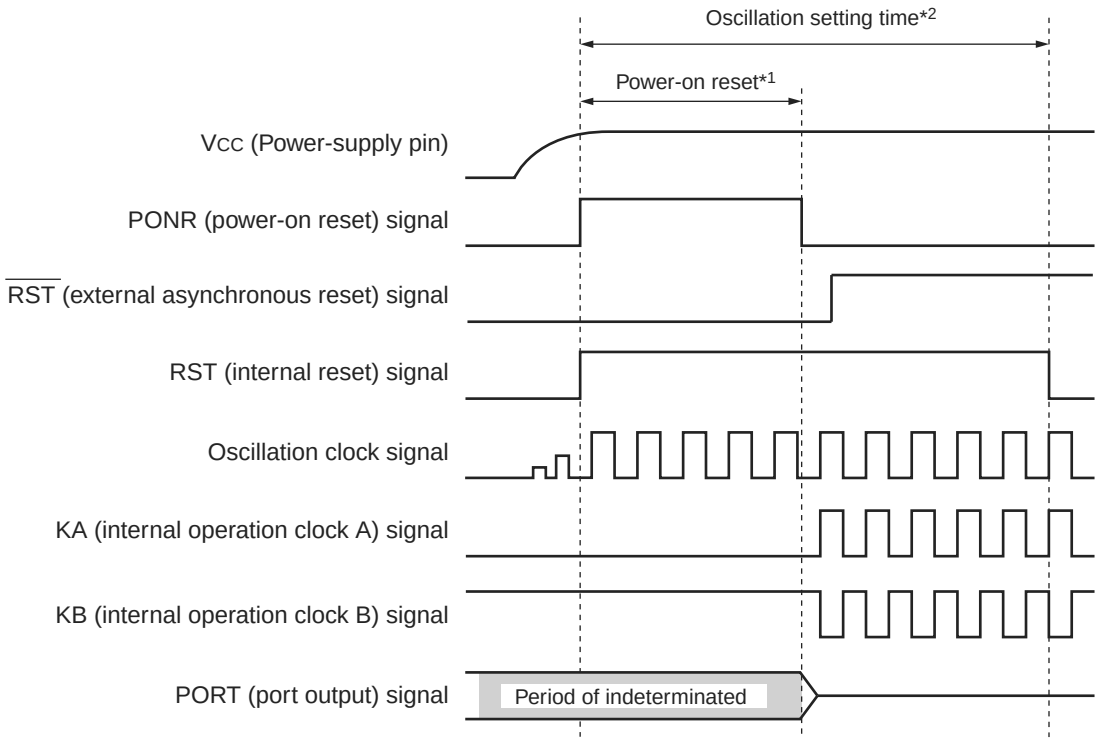
(12) Indeterminate outputs from ports 0 and 1 (MB90V540G only)

During oscillation setting time of step-down circuit (during a power-on reset) after the power is turned on, the outputs from ports 0 and 1 become following state.

- If $\overline{RST}$ pin is “H”, the outputs become indeterminate.
- If $\overline{RST}$ pin is “L”, the outputs become high-impedance.

Pay attention to the port output timing shown as follow.

- $\overline{RST}$ pin is “H”



*1 : Power-on reset time : “Period of clock frequency” × 2^{17} (Clock frequency of 16 MHz : 8.19 ms)

*2 : Oscillation setting time : “Period of clock frequency” × 2^{18} (Clock frequency of 16 MHz : 16.38 ms)

3B00H to 3BFFH	Reserved for CAN 0 Interface.				
3C00H to 3CFFH	Reserved for CAN 1 Interface.				
3D00H to 3DFFH	Reserved for CAN 1 Interface.				
3E00H to 3FFFH	Reserved				

- Read/write notation
  - R/W : Reading and writing permitted
  - R : Read-only
  - W : Write-only

- Initial value notation
  - 0 : Initial value is “0”.
  - 1 : Initial value is “1”.
  - X : Initial value is undefined.
  - _ : Initial value is unused.

Note: Any write access to reserved addresses in I/O map should not be performed. A read access to reserved addresses results in reading “X”.

9. CAN Controller

The MB90540G series contains two CAN controllers (CAN0 and CAN1) , the MB90545G series contains only one (CAN0) . The Evaluation Chip MB90V540G also has two CAN controllers.

The CAN controller has the following features :

- Conforms to CAN Specification Version 2.0 Part A and B
  - Supports transmission/reception in standard frame and extended frame formats
- Supports transmission of data frames by receiving remote frames
- 16 transmitting/receiving message buffers
  - 29-bit ID and 8-byte data
  - Multi-level message buffer configuration
- Provides full-bit comparison, full-bit mask, acceptance register 0/acceptance register 1 for each message buffer as ID acceptance mask
  - Two acceptance mask registers in either standard frame format or extended frame formats
- Bit rate programmable from 10 Kbps to 1 Mbps (when input clock is at 16 MHz)

List of Control Registers

Address		Register	Abbreviation	Access	Initial Value
CAN0	CAN1				
000070_H	000080_H	Message buffer valid register	BVALR	R/W	$00000000\ 00000000_B$

11.4.7 Ready Input Timing

(MB90543G(S)/547G(S)/548G(S)/F548GL(S): V_{CC} = 3.5 V to 5.5 V, V_{SS} = AV_{SS} = 0.0 V, T_A = − 40 °C to + 105 °C)

(Other than MB90543G(S)/547G(S)/548G(S)/F548GL(S): V_{CC} = 5.0 V ± 10%, V_{SS} = AV_{SS} = 0.0 V, T_A = − 40 °C to + 105 °C)

Parameter	Symbol	Pin name	Condition	Value		Units	Remarks
				Min	Max		
RDY setup time	t_{RYHS}	RDY	—	45	—	ns	
RDY hold time	t_{RYHH}	RDY		0	—	ns	

Note : If the RDY setup time is insufficient, use the auto-ready function.
