Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Last Time Buy
Core Processor	R32C/100
Core Size	16/32-Bit
Speed	50MHz
Connectivity	CANbus, EBI/EMI, I²C, IEBus, UART/USART
Peripherals	DMA, LVD, PWM, WDT
Number of I/O	120
Program Memory Size	1MB (1M x 8)
Program Memory Type	FLASH
EEPROM Size	8K x 8
RAM Size	63K x 8
Voltage - Supply (Vcc/Vdd)	3V ~ 5.5V
Data Converters	A/D 34x10b; D/A 2x8b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	144-LQFP
Supplier Device Package	144-LFQFP (20x20)
Purchase URL	https://www.e-xfl.com/product-detail/renesas-electronics-america/r5f64189dfd-ub

Table 1.3 Performance Overview for the 100-pin Package (1/2)

Unit	Function	Explanation
CPU	Central processing unit	R32C/100 Series CPU Core • Basic instructions: 108 • Minimum instruction execution time: 15.625 ns (f(CPU) = 64 MHz) • Multiplier: 32-bit × 32-bit → 64-bit • Multiply-accumulate unit: 32-bit × 32-bit + 64-bit → 64-bit • IEEE-754 compatible FPU: Single precision • 32-bit barrel shifter • Operating mode: Single-chip mode, memory expansion mode, microprocessor mode (optional (1))
Memory		Flash memory: 384 Kbytes to 1 Mbyte RAM: 40 K/48 K/63 Kbytes Data flash: 4 Kbytes × 2 blocks Refer to Table 1.5 for each product's memory size
Voltage Detector	Low voltage detector	Optional (1) Low voltage detection interrupt
Clock	Clock generator	• 4 circuits (main clock, sub clock, PLL, on-chip oscillator) • Oscillation stop detector: Main clock oscillator stop/restart detection • Frequency divide circuit: Divide-by-2 to divide-by-24 selectable • Low power modes: Wait mode, stop mode
External Bus Expansion	Bus and memory expansion	• Address space: 4 Gbytes (of which up to 64 Mbytes is user accessible) • External bus Interface: Support for wait-state insertion, 4 chip select outputs • Bus format: Separate bus/Multiplexed bus selectable, data bus width selectable (8/16 bits)
Interrupts		Interrupt vectors: 261 External interrupt inputs: $\overline{\text{NMI}}$, $\overline{\text{INT}}$ × 6, key input × 4 Interrupt priority levels: 7
Watchdog Timer		15 bits × 1 (selectable input frequency from prescaler output)
DMA	DMAC	4 channels • Cycle-steal transfer mode • Request sources: 51 • 2 transfer modes: Single transfer, repeat transfer
	DMAC II	• Triggered by an interrupt request of any peripheral • 3 characteristic transfer functions: Immediate data transfer, calculation result transfer, chain transfer
I/O Ports	Programmable I/O ports	• 2 input-only ports • 84 CMOS I/O ports (of which 32 are 5 V tolerant) • A pull-up resistor is selectable for every 4 input ports (except 5 V tolerant inputs)

Note:
1. Contact a Renesas Electronics sales office to use the optional features.

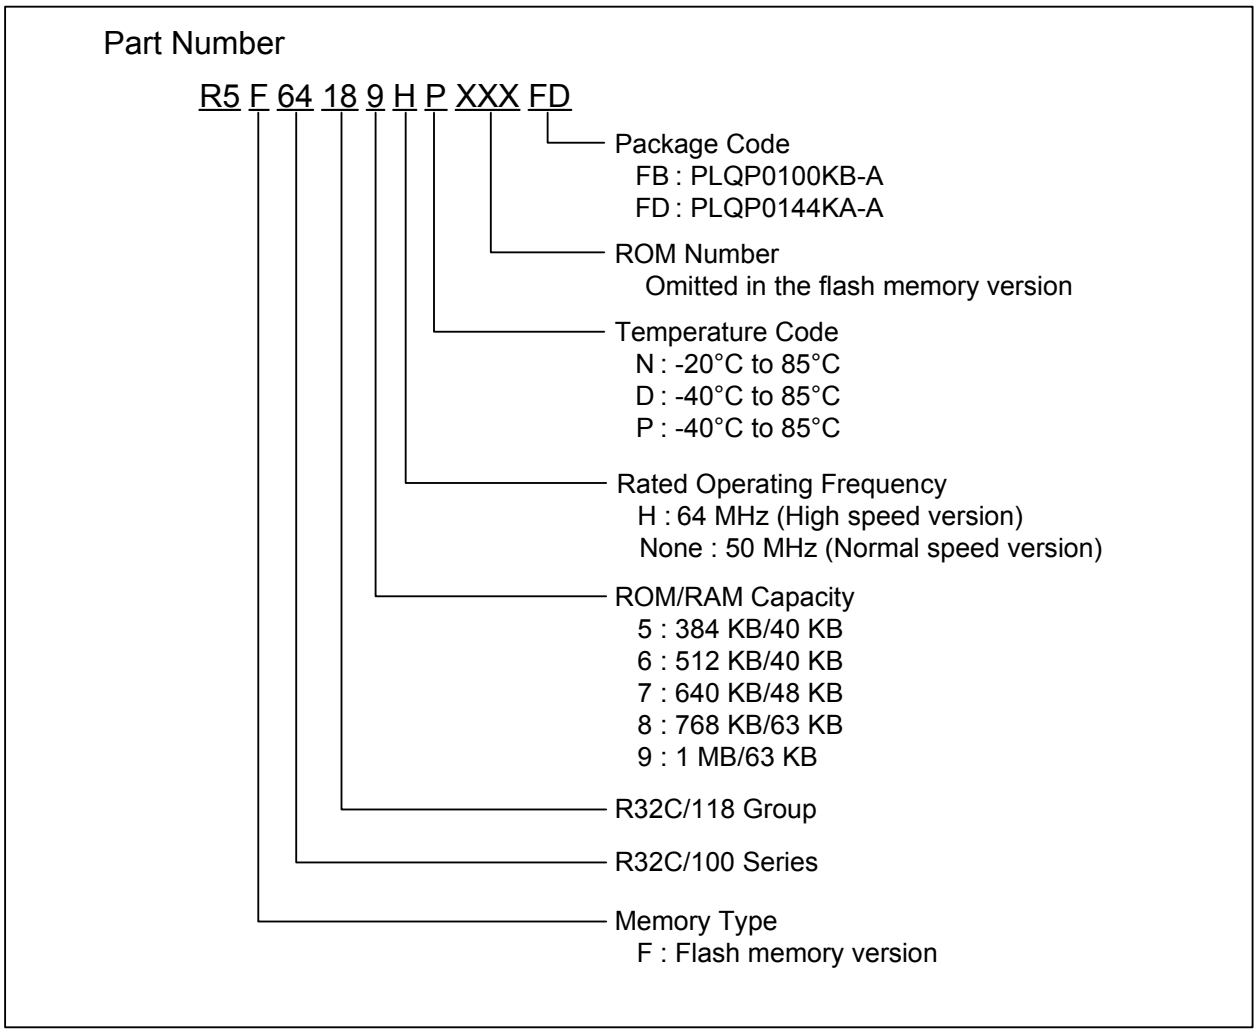

Figure 1.1 Part Numbering

1.5 Pin Definitions and Functions

Tables 1.14 to 1.18 list the pin definitions and functions.

Table 1.14 Pin Definitions and Functions (1/4)

Function	Symbol	I/O	Description
Power supply	VCC, VSS	I	Applicable as follows: VCC = 3.0 to 5.5 V, VSS = 0 V
Connecting pins for decoupling capacitor	VDC0, VDC1	—	A decoupling capacitor for internal voltage should be connected between VDC0 and VDC1
Analog power supply	AVCC, AVSS	I	Power supply for the A/D converter. AVCC and AVSS should be connected to VCC and VSS, respectively
Reset input	$\overline{\text{RESET}}$	I	The MCU is reset when this pin is driven low
CNVSS	CNVSS	I	This pin should be connected to VSS via a resistor
Debug port	NSD	I/O	This pin is to communicate with a debugger. It should be connected to VCC via a resistor of 1 to 4.7 kΩ
Main clock input	XIN	I	Input/output for the main clock oscillator. A crystal, or a ceramic resonator should be connected between pins XIN and XOUT. An external clock should be input at the XIN while leaving the XOUT open
Main clock output	XOUT	O	
Sub clock input	XCIN	I	Input/output for the sub clock oscillator. A crystal oscillator should be connected between pins XCIN and XCOUT. An external clock should be input at the XCIN while leaving the XCOUT open
Sub clock output	XCOUT	O	
BCLK output	BCLK	O	BCLK output
Clock output	CLKOUT	O	Output of the clock with the same frequency as low speed clocks, f8, or f32
External interrupt input	$\overline{\text{INT0}}$ to $\overline{\text{INT8}}$ (1)	I	Input for external interrupts
NMI input	P8_5/$\overline{\text{NMI}}$	I	Input for NMI
Key input interrupt	$\overline{\text{KI0}}$ to $\overline{\text{KI3}}$	I	Input for the key input interrupt
Bus control pins	D0 to D7	I/O	Input/output of data (D0 to D7) while accessing an external memory space with a separate bus
	D8 to D15	I/O	Input/output of data (D8 to D15) while accessing an external memory space with 16-bit or 32-bit separate bus
	D16 to D31 (2)	I/O	Input/output of data (D16 to D31) while accessing an external memory space with 32-bit separate bus
	A0 to A23	O	Output of address bits A0 to A23
	A0/D0 to A7/D7	I/O	Output of address bits (A0 to A7) and input/output of data (D0 to D7) by time-division while accessing an external memory space with multiplexed bus
	A8/D8 to A15/D15	I/O	Output of address bits (A8 to A15) and input/output of data (D8 to D15) by time-division while accessing an external memory space with 16-bit or 32-bit multiplexed bus

Notes:
1. Pins $\overline{\text{INT6}}$ to $\overline{\text{INT8}}$ are available in the 144-pin package only.
2. Pins D16 to D31 are available in the 144-pin package only.

Table 1.17 Pin Definitions and Functions (4/4)

Function	Symbol	I/O	Description
A/D converter	AN_0 to AN_7, AN0_0 to AN0_7, AN2_0 to AN2_7, AN15_0 to AN15_7 (1)	I	Analog input for the A/D converter
	$\overline{\text{ADTRG}}$	I	External trigger input for the A/D converter
	ANEX0	I/O	Expanded analog input for the A/D converter and output in external op-amp connection mode
	ANEX1	I	Expanded analog input for the A/D converter
D/A converter	DA0, DA1	O	Output for the D/A converter
Reference voltage input	VREF	I	Reference voltage input for the A/D converter and D/A converter
Intelligent I/O	IIO0_0 to IIO0_7	I/O	Input/output for Intelligent I/O group 0. Either input capture or output compare is selectable
	IIO1_0 to IIO1_7	I/O	Input/output for Intelligent I/O group 1. Either input capture or output compare is selectable
	UD0A, UD0B, UD1A, UD1B	I	Input for the two-phase encoder
	OUTC2_0 to OUTC2_7 (2)	O	Output for OC (output compare) of Intelligent I/O group 2
	ISCLK2	I/O	Clock input/output for the serial interface
	ISRXD2	I	Receive data input for the serial interface
	ISTXD2	O	Transmit data output for the serial interface
	IEIN	I	Receive data input for the serial interface
	IEOUT	O	Transmit data output for the serial interface
Multi-master I^2C-bus	MSDA	I/O	Serial data input/output
	MSCL	I/O	Transmit/receive clock input/output
CAN Module	CAN0IN, CAN1IN	I	Receive data input for the CAN communications
	CAN0OUT, CAN1OUT	O	Transmit data output for the CAN communications
	$\overline{\text{CAN0WU}}$, $\overline{\text{CAN1WU}}$	I	Input for the CAN wake-up interrupt

Notes:
1. Pins AN15_0 to AN15_7 are available in the 144-pin package only.
2. Pins OUTC2_3 to OUTC2_7 are available in the 144-pin package only.

2.1 General Purpose Registers

2.1.1 Data Registers (R2R0, R3R1, R6R4, and R7R5)

These 32-bit registers are primarily used for transfers and arithmetic/logic operations.
Each of the registers can be divided into upper and lower 16-bit registers, e.g. R2R0 can be divided into R2 and R0, R3R1 can be divided into R3 and R1, etc.
Moreover, data registers R2R0 and R3R1 can be divided into four 8-bit data registers: upper (R2H and R3H), mid-upper (R2L and R3L), mid-lower (R0H and R1H), and lower (R0L and R1L).

2.1.2 Address Registers (A0, A1, A2, and A3)

These 32-bit registers have functions similar to data registers. They are also used for address register indirect addressing and address register relative addressing.

2.1.3 Static Base Register (SB)

This 32-bit register is used for SB relative addressing.

2.1.4 Frame Base Register (FB)

This 32-bit register is used for FB relative addressing.

2.1.5 Program Counter (PC)

This 32-bit counter indicates the address of the instruction to be executed next.

2.1.6 Interrupt Vector Table Base Register (INTB)

This 32-bit register indicates the start address of a relocatable vector table.

2.1.7 User Stack Pointer (USP) and Interrupt Stack Pointer (ISP)

Two types of 32-bit stack pointers (SPs) are provided: user stack pointer (USP) and interrupt stack pointer (ISP).
Use the stack pointer select flag (U flag) to select either the user stack pointer (USP) or the interrupt stack pointer (ISP). The U flag is bit 7 in the flag register (FLG). Refer to 2.1.8 “Flag Register (FLG)” for details.
To minimize the overhead of interrupt sequence due to less memory access, set the user stack pointer (USP) or the interrupt stack pointer (ISP) to a multiple of 4.

2.1.8 Flag Register (FLG)

This 32-bit register indicates the CPU status.

2.1.8.1 Carry Flag (C flag)

This flag retains a carry, borrow, or shifted-out bit generated by the arithmetic logic unit (ALU).

2.1.8.2 Debug Flag (D flag)

This flag is only for debugging. Only set this bit to 0.

2.1.8.3 Zero Flag (Z flag)

This flag becomes 1 when the result of an operation is 0; otherwise it is 0.

2.1.8.4 Sign Flag (S flag)

This flag becomes 1 when the result of an operation is a negative value; otherwise it is 0.

4. Special Function Registers (SFRs)

SFRs are memory-mapped peripheral registers that control the operation of peripherals. Table 4.1 SFR List (1) to Table 4.53 SFR List (53) list the SFR details.

Table 5.3 Operating Conditions (2/5)
(V_{CC} = 3.0 to 5.5 V, V_{SS} = 0 V, and $T_a = T_{opr}$, unless otherwise noted) (1)

Symbol	Characteristic		Value (2)			Unit
			Min.	Typ.	Max.	
C_{VDC}	Decoupling capacitance for voltage regulator	Inter-pin voltage: 1.5 V	2.4		10.0	µF

Notes:
1. The device is operationally guaranteed under these operating conditions.
2. This value should be met with due consideration to the following conditions: operating temperature, DC bias, aging, etc.

Timing Requirements (V_{CC} = 3.0 to 5.5 V, V_{SS} = 0 V, and Ta = T_{opr}, unless otherwise noted)

Table 5.14 Flash Memory CPU Rewrite Mode Timing

Symbol	Characteristics	Value		Unit
		Min.	Max.	
t_{cR}	Read cycle time	200		ns
$t_{su(S-R)}$	Chip-select setup time before read	200		ns
$t_{h(R-S)}$	Chip-select hold time after read	0		ns
$t_{su(A-R)}$	Address setup time before read	200		ns
$t_{h(R-A)}$	Address hold time after read	0		ns
$t_{w(R)}$	Read pulse width	100		ns
t_{cW}	Write cycle time	200		ns
$t_{su(S-W)}$	Chip-select setup time before write	0		ns
$t_{h(W-S)}$	Chip-select hold time after write	30		ns
$t_{su(A-W)}$	Address setup time before write	0		ns
$t_{h(W-A)}$	Address hold time after write	30		ns
$t_{w(W)}$	Write pulse width	50		ns

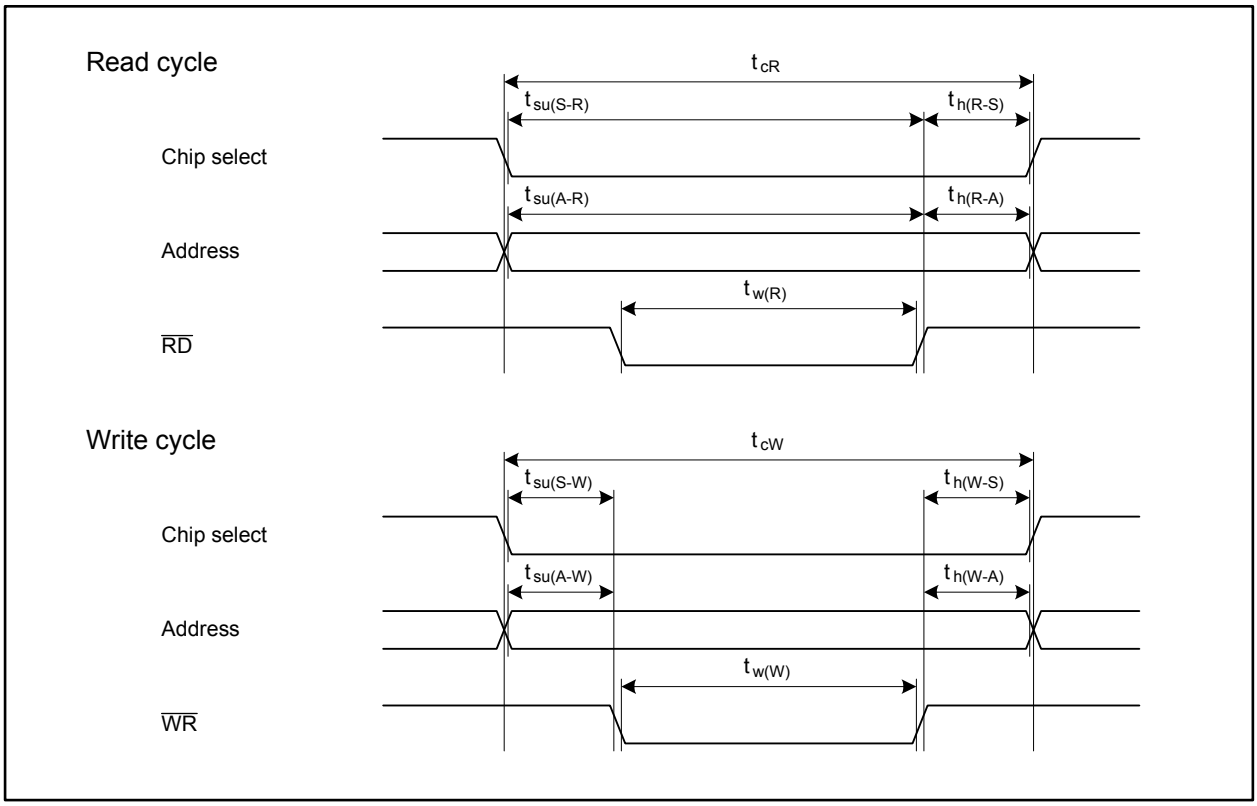

Figure 5.5 Flash Memory CPU Rewrite Mode Timing

V_{CC} = 5 V

Table 5.19 D/A Conversion Characteristics (V_{CC} = AV_{CC} = V_{REF} = 4.2 to 5.5 V, V_{SS} = AV_{SS} = 0 V, and T_a = T_{opr}, unless otherwise noted)

Symbol	Characteristic	Measurement Condition	Value			Unit
			Min.	Typ.	Max.	
—	Resolution				8	Bits
—	Absolute precision				1.0	%
t_S	Settling time				3	µs
R_O	Output resistance		4	10	20	kΩ
I_{VREF}	Reference input current	See Note 1			1.5	mA

Note:
1. One D/A converter is used. The DAi register (i = 0, 1) of the other unused converter is set to 00h. The resistor ladder for the A/D converter is not considered.
Even when the VCUT bit in the AD0CON1 register is set to 0 (V_{REF} disconnected), I_{VREF} is supplied.

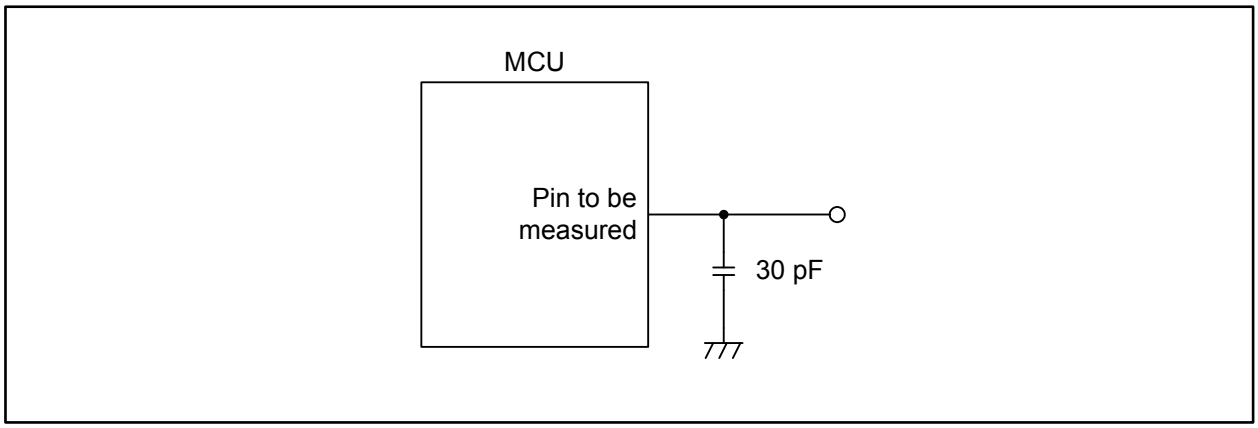

Figure 5.6 Switching Characteristic Measurement Circuit

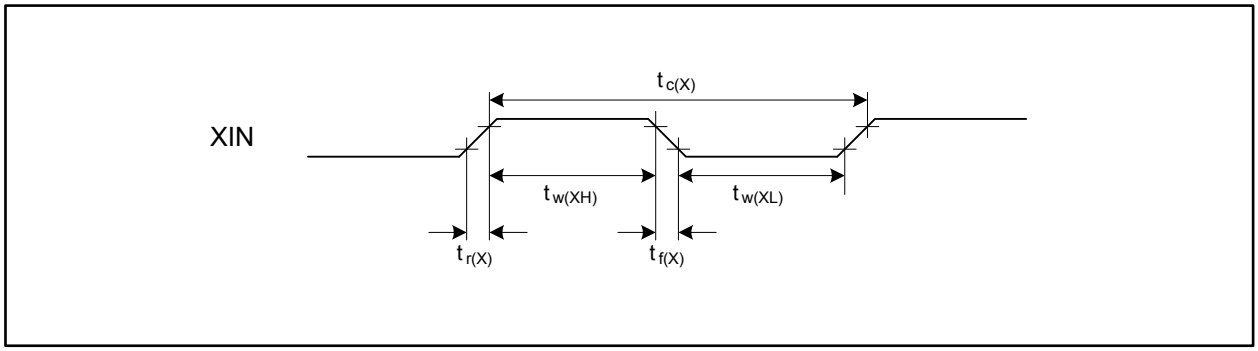

Figure 5.7 External Clock Input Timing

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
3. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Renesas Electronics product.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
   "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots etc.
   "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; and safety equipment etc.
   Renesas Electronics products are neither intended nor authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems, surgical implantations etc.), or may cause serious property damages (nuclear reactor control systems, military equipment etc.). You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application for which it is not intended. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for which the product is not intended by Renesas Electronics.
6. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You should not use Renesas Electronics products or technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. When exporting the Renesas Electronics products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, who distributes, disposes of, or otherwise places the product with a third party, to notify such third party in advance of the contents and conditions set forth in this document, Renesas Electronics assumes no responsibility for any losses incurred by you or third parties as a result of unauthorized use of Renesas Electronics products.
11. This document may not be reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
