### **Embedded - System On Chip (SoC): The Heart of Modern Embedded Systems**

**Embedded - System On Chip (SoC)** refers to an integrated circuit that consolidates all the essential components of a computer system into a single chip. This includes a microprocessor, memory, and other peripherals, all packed into one compact and efficient package. SoCs are designed to provide a complete computing solution, optimizing both space and power consumption, making them ideal for a wide range of embedded applications.

### **What are Embedded - System On Chip (SoC)?**

**System On Chip (SoC)** integrates multiple functions of a computer or electronic system onto a single chip. Unlike traditional multi-chip solutions, SoCs combine a central

**Figure 1 • High Temperature Data Retention (HTR)****2.3.1.1 Overshoot/Undershoot Limits**

For AC signals, the input signal may undershoot during transitions to  $-1.0$  V for no longer than 10% of the period. The current during the transition must not exceed 100 mA.

For AC signals, the input signal may overshoot during transitions to  $V_{CC1} + 1.0$  V for no longer than 10% of the period. The current during the transition must not exceed 100 mA.

**Note:** The above specifications do not apply to the PCI standard. The IGLOO2 and SmartFusion2 PCI I/Os are compliant with the PCI standard including the PCI overshoot/undershoot specifications.

**2.3.1.2 Thermal Characteristics**

The temperature variable in the Microsemi SoC Products Group Designer software refers to the junction temperature, not the ambient, case, or board temperatures. This is an important distinction because dynamic and static power consumption causes the chip's junction temperature to be higher than the ambient, case, or board temperatures.

EQ1 through EQ3 give the relationship between thermal resistance, temperature gradient, and power.

$$\theta_{JA} = \frac{T_J - T_A}{P}$$

EQ 1

$$\theta_{JB} = \frac{T_J - T_B}{P}$$

EQ 2

$$\theta_{JC} = \frac{T_J - T_C}{P}$$

EQ 3

where

- $\theta_{JA}$  = Junction-to-air thermal resistance
- $\theta_{JB}$  = Junction-to-board thermal resistance
- $\theta_{JC}$  = Junction-to-case thermal resistance
- $T_J$  = Junction temperature
- $T_A$  = Ambient temperature
- $T_B$  = Board temperature (measured 1.0 mm away from the package edge)
- $T_C$  = Case temperature
- $P$  = Total power dissipated by the device
