### **Embedded - System On Chip (SoC): The Heart of Modern Embedded Systems**

**Embedded - System On Chip (SoC)** refers to an integrated circuit that consolidates all the essential components of a computer system into a single chip. This includes a microprocessor, memory, and other peripherals, all packed into one compact and efficient package. SoCs are designed to provide a complete computing solution, optimizing both space and power consumption, making them ideal for a wide range of embedded applications.

### **What are Embedded - System On Chip (SoC)?**

**System On Chip (SoC)** integrates multiple functions of a computer or electronic system onto a single chip. Unlike traditional multi-chip solutions, SoCs combine a central

#### **Details**

Product Status	Discontinued at Digi-Key
Architecture	MCU, FPGA
Core Processor	Dual ARM® Cortex®-A9 MPCore™ with CoreSight™
Flash Size	-
RAM Size	256KB
Peripherals	DMA, POR, WDT
Connectivity	EBI/EMI, Ethernet, I <sup>2</sup> C, MMC/SD/SDIO, SPI, UART/USART, USB OTG
Speed	1.5GHz
Primary Attributes	FPGA - 660K Logic Elements
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	1152-BBGA, FCBGA
Supplier Device Package	1152-FBGA, FC (35x35)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/intel/10as066k1f35i1sg">https://www.e-xfl.com/product-detail/intel/10as066k1f35i1sg</a>

## Key Advantages of Intel Arria 10 Devices

**Table 2. Key Advantages of the Intel Arria 10 Device Family**

Advantage	Supporting Feature
Enhanced core architecture	<ul style="list-style-type: none"><li>Built on TSMC's 20 nm process technology</li><li>60% higher performance than the previous generation of mid-range FPGAs</li><li>15% higher performance than the fastest previous-generation FPGA</li></ul>
High-bandwidth integrated transceivers	<ul style="list-style-type: none"><li>Short-reach rates up to 25.8 Gigabits per second (Gbps)</li><li>Backplane capability up to 12.5 Gbps</li><li>Integrated 10GBASE-KR and 40GBASE-KR4 Forward Error Correction (FEC)</li></ul>
Improved logic integration and hard IP blocks	<ul style="list-style-type: none"><li>8-input adaptive logic module (ALM)</li><li>Up to 65.6 megabits (Mb) of embedded memory</li><li>Variable-precision digital signal processing (DSP) blocks</li><li>Fractional synthesis phase-locked loops (PLLs)</li><li>Hard PCI Express Gen3 IP blocks</li><li>Hard memory controllers and PHY up to 2,400 Megabits per second (Mbps)</li></ul>
Second generation hard processor system (HPS) with integrated ARM* Cortex*-A9* MPCore* processor	<ul style="list-style-type: none"><li>Tight integration of a dual-core ARM Cortex-A9 MPCore processor, hard IP, and an FPGA in a single Intel Arria 10 system-on-a-chip (SoC)</li><li>Supports over 128 Gbps peak bandwidth with integrated data coherency between the processor and the FPGA fabric</li></ul>
Advanced power savings	<ul style="list-style-type: none"><li>Comprehensive set of advanced power saving features</li><li>Power-optimized MultiTrack routing and core architecture</li><li>Up to 40% lower power compared to previous generation of mid-range FPGAs</li><li>Up to 60% lower power compared to previous generation of high-end FPGAs</li></ul>

## Summary of Intel Arria 10 Features

**Table 3. Summary of Features for Intel Arria 10 Devices**

Feature	Description
Technology	<ul style="list-style-type: none"><li>TSMC's 20-nm SoC process technology</li><li>Allows operation at a lower <math>V_{CC}</math> level of 0.82 V instead of the 0.9 V standard <math>V_{CC}</math> core voltage</li></ul>
Packaging	<ul style="list-style-type: none"><li>1.0 mm ball-pitch FINELINE BGA packaging</li><li>0.8 mm ball-pitch Ultra FINELINE BGA packaging</li><li>Multiple devices with identical package footprints for seamless migration between different FPGA densities</li><li>Devices with compatible package footprints allow migration to next generation high-end Stratix® 10 devices</li><li>RoHS, leaded<sup>(1)</sup>, and lead-free (Pb-free) options</li></ul>
High-performance FPGA fabric	<ul style="list-style-type: none"><li>Enhanced 8-input ALM with four registers</li><li>Improved multi-track routing architecture to reduce congestion and improve compilation time</li><li>Hierarchical core clocking architecture</li><li>Fine-grained partial reconfiguration</li></ul>
Internal memory blocks	<ul style="list-style-type: none"><li>M20K—20-Kb memory blocks with hard error correction code (ECC)</li><li>Memory logic array block (MLAB)—640-bit memory</li></ul>
continued...

**Figure 5. ALM for Intel Arria 10 Devices**

The Intel Quartus Prime software optimizes your design according to the ALM logic structure and automatically maps legacy designs into the Intel Arria 10 ALM architecture.

## Variable-Precision DSP Block

The Intel Arria 10 variable precision DSP blocks support fixed-point arithmetic and floating-point arithmetic.

Features for fixed-point arithmetic:

- High-performance, power-optimized, and fully registered multiplication operations
- 18-bit and 27-bit word lengths
- Two 18 x 19 multipliers or one 27 x 27 multiplier per DSP block
- Built-in addition, subtraction, and 64-bit double accumulation register to combine multiplication results
- Cascading 19-bit or 27-bit when pre-adder is disabled and cascading 18-bit when pre-adder is used to form the tap-delay line for filtering applications
- Cascading 64-bit output bus to propagate output results from one block to the next block without external logic support
- Hard pre-adder supported in 19-bit and 27-bit modes for symmetric filters
- Internal coefficient register bank in both 18-bit and 27-bit modes for filter implementation
- 18-bit and 27-bit systolic finite impulse response (FIR) filters with distributed output adder
- Biased rounding support

Variant	Product Line	Variable-precision DSP Block	Independent Input and Output Multiplications Operator		18 x 19 Multiplier Adder Sum Mode	18 x 18 Multiplier Adder Summed with 36 bit Input
			18 x 19 Multiplier	27 x 27 Multiplier		
	SX 320	984	1,968	984	984	984

## Embedded Memory Blocks

The embedded memory blocks in the devices are flexible and designed to provide an optimal amount of small- and large-sized memory arrays to fit your design requirements.

## Types of Embedded Memory

The Intel Arria 10 devices contain two types of memory blocks:

- 20 Kb M20K blocks—blocks of dedicated memory resources. The M20K blocks are ideal for larger memory arrays while still providing a large number of independent ports.
- 640 bit memory logic array blocks (MLABs)—enhanced memory blocks that are configured from dual-purpose logic array blocks (LABs). The MLABs are ideal for wide and shallow memory arrays. The MLABs are optimized for implementation of shift registers for digital signal processing (DSP) applications, wide and shallow FIFO buffers, and filter delay lines. Each MLAB is made up of ten adaptive logic modules (ALMs). In the Intel Arria 10 devices, you can configure these ALMs as ten 32 x 2 blocks, giving you one 32 x 20 simple dual-port SRAM block per MLAB.

## Embedded Memory Capacity in Intel Arria 10 Devices

**Table 18. Embedded Memory Capacity and Distribution in Intel Arria 10 Devices**

Variant	Product Line	M20K		MLAB		Total RAM Bit (Kb)
		Block	RAM Bit (Kb)	Block	RAM Bit (Kb)	
Intel Arria 10 GX	GX 160	440	8,800	1,680	1,050	9,850
	GX 220	587	11,740	2,703	1,690	13,430
	GX 270	750	15,000	3,922	2,452	17,452

	GX 480	1,431	28,620	6,662	4,164	32,784
	GX 570	1,800	36,000	8,153	5,096	41,096
	GX 660	2,131	42,620	9,260	5,788	48,408
	GX 900	2,423	48,460	15,017	9,386	57,846
	GX 1150	2,713	54,260	20,774	12,984	67,244
Intel Arria 10 GT	GT 900	2,423	48,460	15,017	9,386	57,846
	GT 1150	2,713	54,260	20,774	12,984	67,244
Intel Arria 10 SX	SX 160	440	8,800	1,680	1,050	9,850
	SX 220	587	11,740	2,703	1,690	13,430
	SX 270	750	15,000	3,922	2,452	17,452
	SX 320	891	17,820	4,363	2,727	20,547
	SX 480	1,431	28,620	6,662	4,164	32,784
	SX 570	1,800	36,000	8,153	5,096	41,096
	SX 660	2,131	42,620	9,260	5,788	48,408

- Series ( $R_S$ ) and parallel ( $R_T$ ) on-chip termination (OCT) for all I/O banks with OCT calibration to limit the termination impedance variation
- On-chip dynamic termination that has the ability to swap between series and parallel termination, depending on whether there is read or write on a common bus for signal integrity
- Easy timing closure support using the hard read FIFO in the input register path, and delay-locked loop (DLL) delay chain with fine and coarse architecture

## External Memory Interface

Intel Arria 10 devices offer massive external memory bandwidth, with up to seven 32-bit DDR4 memory interfaces running at up to 2,400 Mbps. This bandwidth provides additional ease of design, lower power, and resource efficiencies of hardened high-performance memory controllers.

The memory interface within Intel Arria 10 FPGAs and SoCs delivers the highest performance and ease of use. You can configure up to a maximum width of 144 bits when using the hard or soft memory controllers. If required, you can bypass the hard memory controller and use a soft controller implemented in the user logic.

Each I/O contains a hardened DDR read/write path (PHY) capable of performing key memory interface functionality such as read/write leveling, FIFO buffering to lower latency and improve margin, timing calibration, and on-chip termination.

The timing calibration is aided by the inclusion of hard microcontrollers based on Intel's Nios® II technology, specifically tailored to control the calibration of multiple memory interfaces. This calibration allows the Intel Arria 10 device to compensate for any changes in process, voltage, or temperature either within the Intel Arria 10 device itself, or within the external memory device. The advanced calibration algorithms ensure maximum bandwidth and robust timing margin across all operating conditions.

In addition to parallel memory interfaces, Intel Arria 10 devices support serial memory technologies such as the Hybrid Memory Cube (HMC). The HMC is supported by the Intel Arria 10 high-speed serial transceivers which connect up to four HMC links, with each link running at data rates up to 15 Gbps.

#### [Intel Arria 10 Device Datasheet](#)

Lists the memory interface performance according to memory interface standards, rank or chip select configurations, and Intel Arria 10 device speed grades.

## **PCIe Gen1, Gen2, and Gen3 Hard IP**

Intel Arria 10 devices contain PCIe hard IP that is designed for performance and ease-of-use:

- Includes all layers of the PCIe stack—transaction, data link and physical layers.
- Supports PCIe Gen3, Gen2, and Gen1 Endpoint and Root Port in x1, x2, x4, or x8 lane configuration.
- Operates independently from the core logic—optional configuration via protocol (CvP) allows the PCIe link to power up and complete link training in less than 100 ms while the Intel Arria 10 device completes loading the programming file for the rest of the FPGA.
- Provides added functionality that makes it easier to support emerging features such as Single Root I/O Virtualization (SR-IOV) and optional protocol extensions.
- Provides improved end-to-end datapath protection using ECC.
- Supports FPGA configuration via protocol (CvP) using PCIe at Gen3, Gen2, or Gen1 speed.

## **Enhanced PCS Hard IP for Interlaken and 10 Gbps Ethernet**

### **Interlaken Support**

The Intel Arria 10 enhanced PCS hard IP provides integrated Interlaken PCS supporting rates up to 25.8 Gbps per lane.

The Interlaken PCS is based on the proven functionality of the PCS developed for Intel's previous generation FPGAs, which demonstrated interoperability with Interlaken ASSP vendors and third-party IP suppliers. The Interlaken PCS is present in every transceiver channel in Intel Arria 10 devices.

### **Related Information**

[PCS Features](#) on page 30

### **10 Gbps Ethernet Support**

The Intel Arria 10 enhanced PCS hard IP supports 10GBASE-R PCS compliant with IEEE 802.3 10 Gbps Ethernet (10GbE). The integrated hard IP support for 10GbE and the 10 Gbps transceivers save external PHY cost, board space, and system power.

Each transceiver channel contains a channel PLL that can be used as the CMU PLL or clock data recovery (CDR) PLL. In CDR mode, the channel PLL recovers the receiver clock and data in the transceiver channel. Up to 80 independent data rates can be configured on a single Intel Arria 10 device.

**Table 23. PMA Features of the Transceivers in Intel Arria 10 Devices**

Feature	Capability
Chip-to-Chip Data Rates	1 Gbps to 17.4 Gbps (Intel Arria 10 GX devices) 1 Gbps to 25.8 Gbps (Intel Arria 10 GT devices)
Backplane Support	Drive backplanes at data rates up to 12.5 Gbps
Optical Module Support	SFP+/SFP, XFP, CXP, QSFP/QSFP28, CFP/CFP2/CFP4
Cable Driving Support	SFP+ Direct Attach, PCI Express over cable, eSATA
Transmit Pre-Emphasis	4-tap transmit pre-emphasis and de-emphasis to compensate for system channel loss
Continuous Time Linear Equalizer (CTLE)	Dual mode, high-gain, and high-data rate, linear receive equalization to compensate for system channel loss
Decision Feedback Equalizer (DFE)	7-fixed and 4-floating tap DFE to equalize backplane channel loss in the presence of crosstalk and noisy environments
Variable Gain Amplifier	Optimizes the signal amplitude prior to the CDR sampling and operates in fixed and adaptive modes
Altera Digital Adaptive Parametric Tuning (ADAPT)	Fully digital adaptation engine to automatically adjust all link equalization parameters—including CTLE, DFE, and variable gain amplifier blocks—that provide optimal link margin without intervention from user logic
Precision Signal Integrity Calibration Engine (PreSICE)	Hardened calibration controller to quickly calibrate all transceiver control parameters on power-up, which provides the optimal signal integrity and jitter performance
Advanced Transmit (ATX) PLL	Low jitter ATX (LC tank based) PLLs with continuous tuning range to cover a wide range of standard and proprietary protocols
Fractional PLLs	On-chip fractional frequency synthesizers to replace on-board crystal oscillators and reduce system cost
Digitally Assisted Analog CDR	Superior jitter tolerance with fast lock time
Dynamic Partial Reconfiguration	Allows independent control of the Avalon memory-mapped interface of each transceiver channel for the highest transceiver flexibility
Multiple PCS-PMA and PCS-PLD interface widths	8-, 10-, 16-, 20-, 32-, 40-, or 64-bit interface widths for flexibility of deserialization width, encoding, and reduced latency

## PCS Features

This table summarizes the Intel Arria 10 transceiver PCS features. You can use the transceiver PCS to support a wide range of protocols ranging from 1 Gbps to 25.8 Gbps.

PCS	Description
Standard PCS	<ul style="list-style-type: none"> <li>Operates at a data rate up to 12 Gbps</li> <li>Supports protocols such as PCI-Express, CPRI 4.2+, GigE, IEEE 1588 in Hard PCS</li> <li>Implements other protocols using Basic/Custom (Standard PCS) transceiver configuration rules.</li> </ul>
Enhanced PCS	<ul style="list-style-type: none"> <li>Performs functions common to most serial data industry standards, such as word alignment, encoding/decoding, and framing, before data is sent or received off-chip through the PMA</li> <li>Handles data transfer to and from the FPGA fabric</li> <li>Handles data transfer internally to and from the PMA</li> <li>Provides frequency compensation</li> <li>Performs channel bonding for multi-channel low skew applications</li> </ul>
PCIe Gen3 PCS	<ul style="list-style-type: none"> <li>Supports the seamless switching of Data and Clock between the Gen1, Gen2, and Gen3 data rates</li> <li>Provides support for PIPE 3.0 features</li> <li>Supports the PIPE interface with the Hard IP enabled, as well as with the Hard IP bypassed</li> </ul>

## PCS Protocol Support

This table lists some of the protocols supported by the Intel Arria 10 transceiver PCS. For more information about the blocks in the transmitter and receiver data paths, refer to the related information.

Protocol	Data Rate (Gbps)	Transceiver IP	PCS Support
PCIe Gen3 x1, x2, x4, x8	8.0	Native PHY (PIPE)	Standard PCS and PCIe Gen3 PCS
PCIe Gen2 x1, x2, x4, x8	5.0	Native PHY (PIPE)	Standard PCS
PCIe Gen1 x1, x2, x4, x8	2.5	Native PHY (PIPE)	Standard PCS
1000BASE-X Gigabit Ethernet	1.25	Native PHY	Standard PCS
1000BASE-X Gigabit Ethernet with IEEE 1588v2	1.25	Native PHY	Standard PCS
10GBASE-R	10.3125	Native PHY	Enhanced PCS
10GBASE-R with IEEE 1588v2	10.3125	Native PHY	Enhanced PCS
10GBASE-R with KR FEC	10.3125	Native PHY	Enhanced PCS
10GBASE-KR and 1000BASE-X	10.3125	1G/10GbE and 10GBASE-KR PHY	Standard PCS and Enhanced PCS
Interlaken (CEI-6G/11G)	3.125 to 17.4	Native PHY	Enhanced PCS
SFI-S/SFI-5.2	11.2	Native PHY	Enhanced PCS
10G SDI	10.692	Native PHY	Enhanced PCS
continued...			

Protocol	Data Rate (Gbps)	Transceiver IP	PCS Support
CPRI 6.0 (64B/66B)	0.6144 to 10.1376	Native PHY	Enhanced PCS
CPRI 4.2 (8B/10B)	0.6144 to 9.8304	Native PHY	Standard PCS
OBSAI RP3 v4.2	0.6144 to 6.144	Native PHY	Standard PCS
SD-SDI/HD-SDI/3G-SDI	0.143 <sup>(12)</sup> to 2.97	Native PHY	Standard PCS

## SoC with Hard Processor System

Each SoC device combines an FPGA fabric and a hard processor system (HPS) in a single device. This combination delivers the flexibility of programmable logic with the power and cost savings of hard IP in these ways:

- Reduces board space, system power, and bill of materials cost by eliminating a discrete embedded processor
- Allows you to differentiate the end product in both hardware and software, and to support virtually any interface standard
- Extends the product life and revenue through in-field hardware and software updates

---

<sup>(12)</sup> The 0.143 Gbps data rate is supported using oversampling of user logic that you must implement in the FPGA fabric.

## Features of the HPS

The HPS has the following features:

- 1.2-GHz, dual-core ARM Cortex-A9 MPCore processor with up to 1.5-GHz via overdrive
  - ARMv7-A architecture that runs 32-bit ARM instructions, 16-bit and 32-bit Thumb instructions, and 8-bit Java byte codes in Jazelle style
  - Superscalar, variable length, out-of-order pipeline with dynamic branch prediction
  - Instruction Efficiency 2.5 MIPS/MHz, which provides total performance of 7500 MIPS at 1.5 GHz
- Each processor core includes:
  - 32 KB of L1 instruction cache, 32 KB of L1 data cache
  - Single- and double-precision floating-point unit and NEON media engine
  - CoreSight debug and trace technology
  - Snoop Control Unit (SCU) and Acceleration Coherency Port (ACP)
- 512 KB of shared L2 cache
- 256 KB of scratch RAM
- Hard memory controller with support for DDR3, DDR4 and optional error correction code (ECC) support
- Multiport Front End (MPFE) Scheduler interface to the hard memory controller
- 8-channel direct memory access (DMA) controller
- QSPI flash controller with SIO, DIO, QIO SPI Flash support
- NAND flash controller (ONFI 1.0 or later) with DMA and ECC support, updated to support 8 and 16-bit Flash devices and new command DMA to offload CPU for fast power down recovery
- Updated SD/SDIO/MMC controller to eMMC 4.5 with DMA with CE-ATA digital command support
- 3 10/100/1000 Ethernet media access control (MAC) with DMA
- 2 USB On-the-Go (OTG) controllers with DMA
- 5 I<sup>2</sup>C controllers (3 can be used by EMAC for MIO to external PHY)
- 2 UART 16550 Compatible controllers
- 4 serial peripheral interfaces (SPI) (2 Master, 2 Slaves)
- 62 programmable general-purpose I/Os, which includes 48 direct share I/Os that allows the HPS peripherals to connect directly to the FPGA I/Os
- 7 general-purpose timers
- 4 watchdog timers
- Anti-tamper, Secure Boot, Encryption (AES) and Authentication (SHA)

Instead of placing all device functions in the FPGA fabric, you can store some functions that do not run simultaneously in external memory and load them only when required. This capability increases the effective logic density of the device, and lowers cost and power consumption.

In the Intel solution, you do not have to worry about intricate device architecture to perform a partial reconfiguration. The partial reconfiguration capability is built into the Intel Quartus Prime design software, making such time-intensive task simple.

Intel Arria 10 devices support partial reconfiguration in the following configuration options:

- Using an internal host:
  - All supported configuration modes where the FPGA has access to external memory devices such as serial and parallel flash memory.
  - Configuration via Protocol [CvP (PCIe)]
- Using an external host—passive serial (PS), fast passive parallel (FPP) x8, FPP x16, and FPP x32 I/O interface.

## Enhanced Configuration and Configuration via Protocol

**Table 25. Configuration Schemes and Features of Intel Arria 10 Devices**

Intel Arria 10 devices support 1.8 V programming voltage and several configuration schemes.

Scheme	Data Width	Max Clock Rate (MHz)	Max Data Rate (Mbps) <sup>(13)</sup>	Decompression	Design Security <sup>(14)</sup>	Partial Reconfiguration <sup>(15)</sup>	Remote System Update
JTAG	1 bit	33	33	—	—	Yes <sup>(16)</sup>	—
Active Serial (AS) through the EPCQ-L configuration device	1 bit, 4 bits	100	400	Yes	Yes	Yes <sup>(16)</sup>	Yes
Passive serial (PS) through CPLD or external microcontroller	1 bit	100	100	Yes	Yes	Yes <sup>(16)</sup>	Parallel Flash Loader (PFL) IP core

*continued...*

<sup>(13)</sup> Enabling either compression or design security features affects the maximum data rate. Refer to the Intel Arria 10 Device Datasheet for more information.

<sup>(14)</sup> Encryption and compression cannot be used simultaneously.

<sup>(15)</sup> Partial reconfiguration is an advanced feature of the device family. If you are interested in using partial reconfiguration, contact Intel for support.

<sup>(16)</sup> Partial configuration can be performed only when it is configured as internal host.
