### Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### Details

Product Status	Discontinued at Digi-Key
Number of LABs/CLBs	250540
Number of Logic Elements/Cells	660000
Total RAM Bits	49610752
Number of I/O	396
Number of Gates	-
Voltage - Supply	0.87V ~ 0.98V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	1152-BBGA, FCBGA
Supplier Device Package	1152-FCBGA (35x35)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/intel/10ax066k2f35i2sges">https://www.e-xfl.com/product-detail/intel/10ax066k2f35i2sges</a>

## Key Advantages of Intel Arria 10 Devices

**Table 2. Key Advantages of the Intel Arria 10 Device Family**

Advantage	Supporting Feature
Enhanced core architecture	<ul style="list-style-type: none"><li>Built on TSMC's 20 nm process technology</li><li>60% higher performance than the previous generation of mid-range FPGAs</li><li>15% higher performance than the fastest previous-generation FPGA</li></ul>
High-bandwidth integrated transceivers	<ul style="list-style-type: none"><li>Short-reach rates up to 25.8 Gigabits per second (Gbps)</li><li>Backplane capability up to 12.5 Gbps</li><li>Integrated 10GBASE-KR and 40GBASE-KR4 Forward Error Correction (FEC)</li></ul>
Improved logic integration and hard IP blocks	<ul style="list-style-type: none"><li>8-input adaptive logic module (ALM)</li><li>Up to 65.6 megabits (Mb) of embedded memory</li><li>Variable-precision digital signal processing (DSP) blocks</li><li>Fractional synthesis phase-locked loops (PLLs)</li><li>Hard PCI Express Gen3 IP blocks</li><li>Hard memory controllers and PHY up to 2,400 Megabits per second (Mbps)</li></ul>
Second generation hard processor system (HPS) with integrated ARM* Cortex*-A9* MPCore* processor	<ul style="list-style-type: none"><li>Tight integration of a dual-core ARM Cortex-A9 MPCore processor, hard IP, and an FPGA in a single Intel Arria 10 system-on-a-chip (SoC)</li><li>Supports over 128 Gbps peak bandwidth with integrated data coherency between the processor and the FPGA fabric</li></ul>
Advanced power savings	<ul style="list-style-type: none"><li>Comprehensive set of advanced power saving features</li><li>Power-optimized MultiTrack routing and core architecture</li><li>Up to 40% lower power compared to previous generation of mid-range FPGAs</li><li>Up to 60% lower power compared to previous generation of high-end FPGAs</li></ul>

## Summary of Intel Arria 10 Features

**Table 3. Summary of Features for Intel Arria 10 Devices**

Feature	Description
Technology	<ul style="list-style-type: none"><li>TSMC's 20-nm SoC process technology</li><li>Allows operation at a lower <math>V_{CC}</math> level of 0.82 V instead of the 0.9 V standard <math>V_{CC}</math> core voltage</li></ul>
Packaging	<ul style="list-style-type: none"><li>1.0 mm ball-pitch FINELINE BGA packaging</li><li>0.8 mm ball-pitch Ultra FINELINE BGA packaging</li><li>Multiple devices with identical package footprints for seamless migration between different FPGA densities</li><li>Devices with compatible package footprints allow migration to next generation high-end Stratix® 10 devices</li><li>RoHS, leaded<sup>(1)</sup>, and lead-free (Pb-free) options</li></ul>
High-performance FPGA fabric	<ul style="list-style-type: none"><li>Enhanced 8-input ALM with four registers</li><li>Improved multi-track routing architecture to reduce congestion and improve compilation time</li><li>Hierarchical core clocking architecture</li><li>Fine-grained partial reconfiguration</li></ul>
Internal memory blocks	<ul style="list-style-type: none"><li>M20K—20-Kb memory blocks with hard error correction code (ECC)</li><li>Memory logic array block (MLAB)—640-bit memory</li></ul>
continued...	

(1) Contact Intel for availability.

Feature	Description	
Embedded Hard IP blocks	Variable-precision DSP	<ul style="list-style-type: none"><li>Native support for signal processing precision levels from 18 x 19 to 54 x 54</li><li>Native support for 27 x 27 multiplier mode</li><li>64-bit accumulator and cascade for systolic finite impulse responses (FIRs)</li><li>Internal coefficient memory banks</li><li>Padder/subtractor for improved efficiency</li><li>Additional pipeline register to increase performance and reduce power</li><li>Supports floating point arithmetic:<ul style="list-style-type: none"><li>Perform multiplication, addition, subtraction, multiply-add, multiply-subtract, and complex multiplication.</li><li>Supports multiplication with accumulation capability, cascade summation, and cascade subtraction capability.</li><li>Dynamic accumulator reset control.</li><li>Support direct vector dot and complex multiplication chaining multiply floating point DSP blocks.</li></ul></li></ul>
	Memory controller	DDR4, DDR3, and DDR3L
	PCI Express*	PCI Express (PCIe*) Gen3 (x1, x2, x4, or x8), Gen2 (x1, x2, x4, or x8) and Gen1 (x1, x2, x4, or x8) hard IP with complete protocol stack, endpoint, and root port
	Transceiver I/O	<ul style="list-style-type: none"><li>10GBASE-KR/40GBASE-KR4 Forward Error Correction (FEC)</li><li>PCS hard IPs that support:<ul style="list-style-type: none"><li>10-Gbps Ethernet (10GbE)</li><li>PCIe PIPE interface</li><li>Interlaken</li><li>Gbps Ethernet (GbE)</li><li>Common Public Radio Interface (CPRI) with deterministic latency support</li><li>Gigabit-capable passive optical network (GPON) with fast lock-time support</li></ul></li><li>13.5G JESD204b</li><li>8B/10B, 64B/66B, 64B/67B encoders and decoders</li><li>Custom mode support for proprietary protocols</li></ul>
Core clock networks	<ul style="list-style-type: none"><li>Up to 800 MHz fabric clocking, depending on the application:<ul style="list-style-type: none"><li>667 MHz external memory interface clocking with 2,400 Mbps DDR4 interface</li><li>800 MHz LVDS interface clocking with 1,600 Mbps LVDS interface</li></ul></li><li>Global, regional, and peripheral clock networks</li><li>Clock networks that are not used can be gated to reduce dynamic power</li></ul>	
Phase-locked loops (PLLs)	<ul style="list-style-type: none"><li>High-resolution fractional synthesis PLLs:<ul style="list-style-type: none"><li>Precision clock synthesis, clock delay compensation, and zero delay buffering (ZDB)</li><li>Support integer mode and fractional mode</li><li>Fractional mode support with third-order delta-sigma modulation</li></ul></li><li>Integer PLLs:<ul style="list-style-type: none"><li>Adjacent to general purpose I/Os</li><li>Support external memory and LVDS interfaces</li></ul></li></ul>	
FPGA General-purpose I/Os (GPIOs)	<ul style="list-style-type: none"><li>1.6 Gbps LVDS—every pair can be configured as receiver or transmitter</li><li>On-chip termination (OCT)</li><li>1.2 V to 3.0 V single-ended LVTTTL/LVCMOS interfacing</li></ul>	
External Memory Interface	<ul style="list-style-type: none"><li>Hard memory controller—DDR4, DDR3, and DDR3L support<ul style="list-style-type: none"><li>DDR4—speeds up to 1,200 MHz/2,400 Mbps</li><li>DDR3—speeds up to 1,067 MHz/2,133 Mbps</li></ul></li><li>Soft memory controller—provides support for RLDRAM 3<sup>(2)</sup>, QDR IV<sup>(2)</sup>, and QDR II+</li></ul>

## Maximum Resources

**Table 5. Maximum Resource Counts for Intel Arria 10 GX Devices (GX 160, GX 220, GX 270, GX 320, and GX 480)**

Resource		Product Line				
		GX 160	GX 220	GX 270	GX 320	GX 480
Logic Elements (LE) (K)		160	220	270	320	480
ALM		61,510	80,330	101,620	119,900	183,590
Register		246,040	321,320	406,480	479,600	734,360
Memory (Kb)	M20K	8,800	11,740	15,000	17,820	28,620
	MLAB	1,050	1,690	2,452	2,727	4,164
Variable-precision DSP Block		156	192	830	985	1,368
18 x 19 Multiplier		312	384	1,660	1,970	2,736
PLL	Fractional Synthesis	6	6	8	8	12
	I/O	6	6	8	8	12
17.4 Gbps Transceiver		12	12	24	24	36
GPIO <sup>(3)</sup>		288	288	384	384	492
LVDS Pair <sup>(4)</sup>		120	120	168	168	222
PCIe Hard IP Block		1	1	2	2	2
Hard Memory Controller		6	6	8	8	12

<sup>(3)</sup> The number of GPIOs does not include transceiver I/Os. In the Intel Quartus Prime software, the number of user I/Os includes transceiver I/Os.

<sup>(4)</sup> Each LVDS I/O pair can be used as differential input or output.

**Table 8. Package Plan for Intel Arria 10 GX Devices (F34, F35, NF40, and KF40)**

Refer to I/O and High Speed I/O in Intel Arria 10 Devices chapter for the number of 3 V I/O, LVDS I/O, and LVDS channels in each device package.

Product Line	F34 (35 mm × 35 mm, 1152-pin FBGA)			F35 (35 mm × 35 mm, 1152-pin FBGA)			KF40 (40 mm × 40 mm, 1517-pin FBGA)			NF40 (40 mm × 40 mm, 1517-pin FBGA)		
	3 V I/O	LVDS I/O	XCVR	3 V I/O	LVDS I/O	XCVR	3 V I/O	LVDS I/O	XCVR	3 V I/O	LVDS I/O	XCVR

SX 320	—	—	—	48	192	12	48	312	12	48	336	24
continued...												

<sup>(8)</sup> The number of GPIOs does not include transceiver I/Os. In the Intel Quartus Prime software, the number of user I/Os includes transceiver I/Os.

<sup>(9)</sup> Each LVDS I/O pair can be used as differential input or output.

## I/O Vertical Migration for Intel Arria 10 Devices

**Figure 4. Migration Capability Across Intel Arria 10 Product Lines**

- The arrows indicate the migration paths. The devices included in each vertical migration path are shaded. Devices with fewer resources in the same path have lighter shades.
- To achieve the full I/O migration across product lines in the same migration path, restrict I/Os and transceivers usage to match the product line with the lowest I/O and transceiver counts.
- An LVDS I/O bank in the source device may be mapped to a 3 V I/O bank in the target device. To use memory interface clock frequency higher than 533 MHz, assign external memory interface pins only to banks that are LVDS I/O in both devices.
- There may be nominal 0.15 mm package height difference between some product lines in the same package type.
- Some migration paths are not shown in the Intel Quartus Prime software **Pin Migration View**.

Variant	Product Line	Package										
		U19	F27	F29	F34	F35	KF40	NF40	RF40	NF45	SF45	UF45

	GX 480			↓	↑	↑						
	GX 570				↑	↑	↑	↑				
	GX 660				↑	↑	↑	↑	↑	↑	↑	↑
	GX 900				↑			↑	↑	↑	↑	↑
	GX 1150				↑			↑	↑	↑	↑	↑
	GT 900										↑	↑
	GT 1150										↑	↑
Intel Arria 10 SX	SX 160	↑	↑	↑								
	SX 220	↓	↓	↓								
	SX 270		↓	↓	↑	↑						
	SX 320		↓	↓	↑	↑						
	SX 480			↓	↑	↑						
	SX 570				↑	↑	↑	↑				
	SX 660				↑	↑	↑	↑				

**Note:** To verify the pin migration compatibility, use the **Pin Migration View** window in the Intel Quartus Prime software Pin Planner.

## Adaptive Logic Module

Intel Arria 10 devices use a 20 nm ALM as the basic building block of the logic fabric.

The ALM architecture is the same as the previous generation FPGAs, allowing for efficient implementation of logic functions and easy conversion of IP between the device generations.

The ALM, as shown in following figure, uses an 8-input fracturable look-up table (LUT) with four dedicated registers to help improve timing closure in register-rich designs and achieve an even higher design packing capability than the traditional two-register per LUT architecture.

**Figure 5. ALM for Intel Arria 10 Devices**

The Intel Quartus Prime software optimizes your design according to the ALM logic structure and automatically maps legacy designs into the Intel Arria 10 ALM architecture.

## Variable-Precision DSP Block

The Intel Arria 10 variable precision DSP blocks support fixed-point arithmetic and floating-point arithmetic.

Features for fixed-point arithmetic:

- High-performance, power-optimized, and fully registered multiplication operations
- 18-bit and 27-bit word lengths
- Two 18 x 19 multipliers or one 27 x 27 multiplier per DSP block
- Built-in addition, subtraction, and 64-bit double accumulation register to combine multiplication results
- Cascading 19-bit or 27-bit when pre-adder is disabled and cascading 18-bit when pre-adder is used to form the tap-delay line for filtering applications
- Cascading 64-bit output bus to propagate output results from one block to the next block without external logic support
- Hard pre-adder supported in 19-bit and 27-bit modes for symmetric filters
- Internal coefficient register bank in both 18-bit and 27-bit modes for filter implementation
- 18-bit and 27-bit systolic finite impulse response (FIR) filters with distributed output adder
- Biased rounding support

Variant	Product Line	Variable-precision DSP Block	Independent Input and Output Multiplications Operator		18 x 19 Multiplier Adder Sum Mode	18 x 18 Multiplier Adder Summed with 36 bit Input
			18 x 19 Multiplier	27 x 27 Multiplier

## Embedded Memory Blocks

The embedded memory blocks in the devices are flexible and designed to provide an optimal amount of small- and large-sized memory arrays to fit your design requirements.

## Types of Embedded Memory

The Intel Arria 10 devices contain two types of memory blocks:

- 20 Kb M20K blocks—blocks of dedicated memory resources. The M20K blocks are ideal for larger memory arrays while still providing a large number of independent ports.
- 640 bit memory logic array blocks (MLABs)—enhanced memory blocks that are configured from dual-purpose logic array blocks (LABs). The MLABs are ideal for wide and shallow memory arrays. The MLABs are optimized for implementation of shift registers for digital signal processing (DSP) applications, wide and shallow FIFO buffers, and filter delay lines. Each MLAB is made up of ten adaptive logic modules (ALMs). In the Intel Arria 10 devices, you can configure these ALMs as ten 32 x 2 blocks, giving you one 32 x 20 simple dual-port SRAM block per MLAB.

## Embedded Memory Capacity in Intel Arria 10 Devices

**Table 18. Embedded Memory Capacity and Distribution in Intel Arria 10 Devices**

Variant	Product Line	M20K		MLAB		Total RAM Bit (Kb)
		Block	RAM Bit (Kb)	Block	RAM Bit (Kb)	
Intel Arria 10 GX	GX 160	440	8,800	1,680	1,050	9,850
	GX 220	587	11,740	2,703	1,690	13,430
	GX 270	750	15,000	3,922	2,452	17,452
	GX 320	891	17,820	4,363	2,727	20,547
	GX 480	1,431	28,620	6,662	4,164	32,784
	GX 570	1,800	36,000	8,153	5,096	41,096
	GX 660	2,131	42,620	9,260	5,788	48,408
	GX 900	2,423	48,460	15,017	9,386	57,846
	GX 1150	2,713	54,260	20,774	12,984	67,244
Intel Arria 10 GT	GT 900	2,423	48,460	15,017	9,386	57,846
	GT 1150	2,713	54,260	20,774	12,984	67,244
Intel Arria 10 SX	SX 160	440	8,800	1,680	1,050	9,850
	SX 220	587	11,740	2,703	1,690	13,430
	SX 270	750	15,000	3,922	2,452	17,452
	SX 320	891	17,820	4,363	2,727	20,547
	SX 480	1,431	28,620	6,662	4,164	32,784
	SX 570	1,800	36,000	8,153	5,096	41,096
	SX 660	2,131	42,620	9,260	5,788	48,408

## Embedded Memory Configurations for Single-port Mode

**Table 19. Single-port Embedded Memory Configurations for Intel Arria 10 Devices**

This table lists the maximum configurations supported for single-port RAM and ROM modes.

Memory Block	Depth (bits)	Programmable Width
MLAB	32	x16, x18, or x20
	64 <sup>(10)</sup>	x8, x9, x10
M20K	512	x40, x32
	1K	x20, x16
	2K	x10, x8
	4K	x5, x4
	8K	x2
	16K	x1

## Clock Networks and PLL Clock Sources

The clock network architecture is based on Intel's global, regional, and peripheral clock structure. This clock structure is supported by dedicated clock input pins, fractional clock synthesis PLLs, and integer I/O PLLs.

### Clock Networks

The Intel Arria 10 core clock networks are capable of up to 800 MHz fabric operation across the full industrial temperature range. For the external memory interface, the clock network supports the hard memory controller with speeds up to 2,400 Mbps in a quarter-rate transfer.

To reduce power consumption, the Intel Quartus Prime software identifies all unused sections of the clock network and powers them down.

### Fractional Synthesis and I/O PLLs

Intel Arria 10 devices contain up to 32 fractional synthesis PLLs and up to 16 I/O PLLs that are available for both specific and general purpose uses in the core:

- Fractional synthesis PLLs—located in the column adjacent to the transceiver blocks
- I/O PLLs—located in each bank of the 48 I/Os

### Fractional Synthesis PLLs

You can use the fractional synthesis PLLs to:

- Reduce the number of oscillators that are required on your board
- Reduce the number of clock pins that are used in the device by synthesizing multiple clock frequencies from a single reference clock source

<sup>(10)</sup> Supported through software emulation and consumes additional MLAB blocks.

The fractional synthesis PLLs support the following features:

- Reference clock frequency synthesis for transceiver CMU and Advanced Transmit (ATX) PLLs
- Clock network delay compensation
- Zero-delay buffering
- Direct transmit clocking for transceivers
- Independently configurable into two modes:
  - Conventional integer mode equivalent to the general purpose PLL
  - Enhanced fractional mode with third order delta-sigma modulation
- PLL cascading

## I/O PLLs

The integer mode I/O PLLs are located in each bank of 48 I/Os. You can use the I/O PLLs to simplify the design of external memory and high-speed LVDS interfaces.

In each I/O bank, the I/O PLLs are adjacent to the hard memory controllers and LVDS SERDES. Because these PLLs are tightly coupled with the I/Os that need to use them, it makes it easier to close timing.

You can use the I/O PLLs for general purpose applications in the core such as clock network delay compensation and zero-delay buffering.

Intel Arria 10 devices support PLL-to-PLL cascading.

## FPGA General Purpose I/O

Intel Arria 10 devices offer highly configurable GPIOs. Each I/O bank contains 48 general purpose I/Os and a high-efficiency hard memory controller.

The following list describes the features of the GPIOs:

- Consist of 3 V I/Os for high-voltage application and LVDS I/Os for differential signaling
  - Up to two 3 V I/O banks, available in some devices, that support up to 3 V I/O standards
  - LVDS I/O banks that support up to 1.8 V I/O standards
- Support a wide range of single-ended and differential I/O interfaces
- LVDS speeds up to 1.6 Gbps
- Each LVDS pair of pins has differential input and output buffers, allowing you to configure the LVDS direction for each pair.
- Programmable bus hold and weak pull-up
- Programmable differential output voltage ( $V_{OD}$ ) and programmable pre-emphasis

**Table 20. Memory Standards Supported by the Hard Memory Controller**

This table lists the overall capability of the hard memory controller. For specific details, refer to the External Memory Interface Spec Estimator and Intel Arria 10 Device Datasheet.

Memory Standard	Rate Support	Ping Pong PHY Support	Maximum Frequency (MHz)
DDR4 SDRAM	Quarter rate	Yes	1,067
		—	1,200
DDR3 SDRAM	Half rate	Yes	533
		—	667
	Quarter rate	Yes	1,067
		—	1,067
DDR3L SDRAM	Half rate	Yes	533
		—	667
	Quarter rate	Yes	933
		—	933
LPDDR3 SDRAM	Half rate	—	533
	Quarter rate	—	800

**Table 21. Memory Standards Supported by the Soft Memory Controller**

Memory Standard	Rate Support	Maximum Frequency (MHz)
RLDRAM 3 <sup>(11)</sup>	Quarter rate	1,200
QDR IV SRAM <sup>(11)</sup>	Quarter rate	1,067
QDR II SRAM	Full rate	333
	Half rate	633
QDR II+ SRAM	Full rate	333
	Half rate	633
QDR II+ Xtreme SRAM	Full rate	333
	Half rate	633

**Table 22. Memory Standards Supported by the HPS Hard Memory Controller**

The hard processor system (HPS) is available in Intel Arria 10 SoC devices only.

Memory Standard	Rate Support	Maximum Frequency (MHz)
DDR4 SDRAM	Half rate	1,200
DDR3 SDRAM	Half rate	1,067
DDR3L SDRAM	Half rate	933

<sup>(11)</sup> Intel Arria 10 devices support this external memory interface using hard PHY with soft memory controller.

Figure 7. Device Chip Overview for Intel Arria 10 GX and GT Devices

Figure 8. Device Chip Overview for Intel Arria 10 SX Devices

## PMA Features

Intel Arria 10 transceivers provide exceptional signal integrity at data rates up to 25.8 Gbps. Clocking options include ultra-low jitter ATX PLLs (LC tank based), clock multiplier unit (CMU) PLLs, and fractional PLLs.

**Table 24. Improvements in 20 nm HPS**

This table lists the key improvements of the 20 nm HPS compared to the 28 nm HPS.

Advantages/ Improvements	Description
Increased performance and overdrive capability	While the nominal processor frequency is 1.2 GHz, the 20 nm HPS offers an “overdrive” feature which enables a higher processor operating frequency. This requires a higher supply voltage value that is unique to the HPS and may require a separate regulator.
Increased processor memory bandwidth and DDR4 support	Up to 64-bit DDR4 memory at 2,400 Mbps support is available for the processor. The hard memory controller for the HPS comprises a multi-port front end that manages connections to a single port memory controller. The multi-port front end allows logic core and the HPS to share ports and thereby the available bandwidth of the memory controller.
Flexible I/O sharing	An advanced I/O pin muxing scheme allows improved sharing of I/O between the HPS and the core logic. The following types of I/O are available for SoC: <ul style="list-style-type: none"><li>• 17 dedicated I/Os—physically located inside the HPS block and are not accessible to logic within the core. The 17 dedicated I/Os are used for HPS clock, resets, and interfacing with boot devices, QSPI, and SD/MMC.</li><li>• 48 direct shared I/O—located closest to the HPS block and are ideal for high speed HPS peripherals such as EMAC, USB, and others. There is one bank of 48 I/Os that supports direct sharing where the 48 I/Os can be shared 12 I/Os at a time.</li><li>• Standard (shared) I/O—all standard I/Os can be shared by the HPS peripherals and any logic within the core. For designs where more than 48 I/Os are required to fully use all the peripherals in the HPS, these I/Os can be connected through the core logic.</li></ul>
EMAC core	Three EMAC cores are available in the HPS. The EMAC cores enable an application to support two redundant Ethernet connections; for example, backplane, or two EMAC cores for managing IEEE 1588 time stamp information while allowing a third EMAC core for debug and configuration. All three EMACs can potentially share the same time stamps, simplifying the 1588 time stamping implementation. A new serial time stamp interface allows core logic to access and read the time stamp values. The integrated EMAC controllers can be connected to external Ethernet PHY through the provided MDIO or I <sup>2</sup> C interface.
On-chip memory	The on-chip memory is updated to 256 KB support and can support larger data sets and real time algorithms.
ECC enhancements	Improvements in L2 Cache ECC management allow identification of errors down to the address level. ECC enhancements also enable improved error injection and status reporting via the introduction of new memory mapped access to syndrome and data signals.
HPS to FPGA Interconnect Backbone	Although the HPS and the Logic Core can operate independently, they are tightly coupled via a high-bandwidth system interconnect built from high-performance ARM AMBA AXI bus bridges. IP bus masters in the FPGA fabric have access to HPS bus slaves via the FPGA-to-HPS interconnect. Similarly, HPS bus masters have access to bus slaves in the core fabric via the HPS-to-FPGA bridge. Both bridges are AMBA AXI-3 compliant and support simultaneous read and write transactions. Up to three masters within the core fabric can share the HPS SDRAM controller with the processor. Additionally, the processor can be used to configure the core fabric under program control via a dedicated 32-bit configuration port.
FPGA configuration and HPS booting	The FPGA fabric and HPS in the SoCs are powered independently. You can reduce the clock frequencies or gate the clocks to reduce dynamic power. You can configure the FPGA fabric and boot the HPS independently, in any order, providing you with more design flexibility.
Security	New security features have been introduced for anti-tamper management, secure boot, encryption (AES), and authentication (SHA).

Scheme	Data Width	Max Clock Rate (MHz)	Max Data Rate (Mbps) <sup>(13)</sup>	Decompression	Design Security <sup>(14)</sup>	Partial Reconfiguration <sup>(15)</sup>	Remote System Update
Fast passive parallel (FPP) through CPLD or external microcontroller	8 bits	100	3200	Yes	Yes	Yes <sup>(17)</sup>	PFL IP core
	16 bits			Yes	Yes		
	32 bits			Yes	Yes		
Configuration via HPS	16 bits	100	3200	Yes	Yes	Yes <sup>(17)</sup>	—
	32 bits			Yes	Yes		
Configuration via Protocol [CvP (PCIe*)]	x1, x2, x4, x8 lanes	—	8000	Yes	Yes	Yes <sup>(16)</sup>	—

You can configure Intel Arria 10 devices through PCIe using Configuration via Protocol (CvP). The Intel Arria 10 CvP implementation conforms to the PCIe 100 ms power-up-to-active time requirement.

## SEU Error Detection and Correction

Intel Arria 10 devices offer robust and easy-to-use single-event upset (SEU) error detection and correction circuitry.

The detection and correction circuitry includes protection for Configuration RAM (CRAM) programming bits and user memories. The CRAM is protected by a continuously running CRC error detection circuit with integrated ECC that automatically corrects one or two errors and detects higher order multi-bit errors. When more than two errors occur, correction is available through reloading of the core programming file, providing a complete design refresh while the FPGA continues to operate.

The physical layout of the Intel Arria 10 CRAM array is optimized to make the majority of multi-bit upsets appear as independent single-bit or double-bit errors which are automatically corrected by the integrated CRAM ECC circuitry. In addition to the CRAM protection, the M20K memory blocks also include integrated ECC circuitry and are layout-optimized for error detection and correction. The MLAB does not have ECC.

## Power Management

Intel Arria 10 devices leverage the advanced 20 nm process technology, a low 0.9 V core power supply, an enhanced core architecture, and several optional power reduction techniques to reduce total power consumption by as much as 40% compared to Arria V devices and as much as 60% compared to Stratix V devices.

<sup>(13)</sup> Enabling either compression or design security features affects the maximum data rate. Refer to the Intel Arria 10 Device Datasheet for more information.

<sup>(14)</sup> Encryption and compression cannot be used simultaneously.

<sup>(15)</sup> Partial reconfiguration is an advanced feature of the device family. If you are interested in using partial reconfiguration, contact Intel for support.

<sup>(17)</sup> Supported at a maximum clock rate of 100 MHz.

The optional power reduction techniques in Intel Arria 10 devices include:

- **SmartVID**—a code is programmed into each device during manufacturing that allows a smart regulator to operate the device at lower core  $V_{CC}$  while maintaining performance
- **Programmable Power Technology**—non-critical timing paths are identified by the Intel Quartus Prime software and the logic in these paths is biased for low power instead of high performance
- **Low Static Power Options**—devices are available with either standard static power or low static power while maintaining performance

Furthermore, Intel Arria 10 devices feature Intel's industry-leading low power transceivers and include a number of hard IP blocks that not only reduce logic resources but also deliver substantial power savings compared to soft implementations. In general, hard IP blocks consume up to 90% less power than the equivalent soft logic implementations.

## Incremental Compilation

The Intel Quartus Prime software incremental compilation feature reduces compilation time and helps preserve performance to ease timing closure. The incremental compilation feature enables the partial reconfiguration flow for Intel Arria 10 devices.

Incremental compilation supports top-down, bottom-up, and team-based design flows. This feature facilitates modular, hierarchical, and team-based design flows where different designers compile their respective design sections in parallel. Furthermore, different designers or IP providers can develop and optimize different blocks of the design independently. These blocks can then be imported into the top level project.

## Document Revision History for Intel Arria 10 Device Overview

Document Version	Changes
2018.04.09	Updated the lowest $V_{CC}$ from 0.83 V to 0.82 V in the topic listing a summary of the device features.

Date	Version	Changes
January 2018	2018.01.17	<ul style="list-style-type: none"><li>• Updated the maximum data rate for HPS (Intel Arria 10 SX devices external memory interface DDR3 controller from 2,166 Mbps to 2,133 Mbps.</li><li>• Updated maximum frequency supported for half rate QDR II and QDR II + SRAM to 633 MHz in <i>Memory Standards Supported by the Soft Memory Controller</i> table.</li><li>• Updated transceiver backplane capability to 12.5 Gbps.</li><li>• Removed transceiver speed grade 5 in <i>Sample Ordering Core and Available Options for Intel Arria 10 GX Devices</i> figure.</li></ul>
continued...		

Date	Version	Changes
		<ul style="list-style-type: none"> <li>Removed package code 40, low static power, SmartVID, industrial, and military operating temperature support from <i>Sample Ordering Core and Available Options for Intel Arria 10 GT Devices</i> figure.</li> <li>Updated short reach transceiver rate for Intel Arria 10 GT devices to 25.8 Gbps.</li> <li>Removed On-Die Instrumentation — EyeQ and Jitter Margin Tool support from <i>PMA Features of the Transceivers in Intel Arria 10 Devices</i> table.</li> </ul>
September 2017	2017.09.20	Updated the maximum speed of the DDR4 external memory interface from 1,333 MHz/2,666 Mbps to 1,200 MHz/2,400 Mbps.
July 2017	2017.07.13	Corrected the automotive temperature range in the figure showing the available options for the Intel Arria 10 GX devices from "-40°C to 100°C" to "-40°C to 125°C".
July 2017	2017.07.06	Added automotive temperature option to Intel Arria 10 GX device family.
May 2017	2017.05.08	<ul style="list-style-type: none"> <li>Corrected protocol names with "1588" to "IEEE 1588v2".</li> <li>Updated the vertical migration table to remove vertical migration between Intel Arria 10 GX and Intel Arria 10 SX device variants.</li> <li>Removed all "Preliminary" marks.</li> </ul>
March 2017	2017.03.15	<ul style="list-style-type: none"> <li>Removed the topic about migration from Intel Arria 10 to Intel Stratix 10 devices.</li> <li>Rebranded as Intel.</li> </ul>
October 2016	2016.10.31	<ul style="list-style-type: none"> <li>Removed package F36 from Intel Arria 10 GX devices.</li> <li>Updated Intel Arria 10 GT sample ordering code and maximum GX transceiver count. Intel Arria 10 GT devices are available only in the SF45 package option with a maximum of 72 transceivers.</li> </ul>
May 2016	2016.05.02	<ul style="list-style-type: none"> <li>Updated the FPGA Configuration and HPS Booting topic.</li> <li>Remove V<sub>CC</sub> PowerManager from the Summary of Features, Power Management and Arria 10 Device Variants and packages topics. This feature is no longer supported in Arria 10 devices.</li> <li>Removed LPDDR3 from the Memory Standards Supported by the HPS Hard Memory Controller table in the Memory Standards Supported by Intel Arria 10 Devices topic. This standard is only supported by the FPGA.</li> <li>Removed transceiver speed grade 5 from the Device Variants and Packages topic for Arria 10 GX and SX devices.</li> </ul>
February 2016	2016.02.11	<ul style="list-style-type: none"> <li>Changed the maximum Arria 10 GT datarate to 25.8 Gbps and the minimum datarate to 1 Gbps globally.</li> <li>Revised the state for Core clock networks in the Summary of Features topic.</li> <li>Changed the transceiver parameters in the "Summary of Features for Arria 10 Devices" table.</li> <li>Changed the transceiver parameters in the "Maximum Resource Counts for Arria 10 GT Devices" table.</li> <li>Changed the package availability for GT devices in the "Package Plan for Arria 10 GT Devices" table.</li> <li>Changed the package configurations for GT devices in the "Migration Capability Across Arria 10 Product Lines" figure.</li> <li>Changed transceiver parameters in the "Low Power Serial Transceivers" section.</li> <li>Changed the transceiver descriptions in the "Device Variants for the Arria 10 Device Family" table.</li> <li>Changed the "Sample Ordering Code and Available Options for Arria 10 GT Devices" figure.</li> <li>Changed the datarates for GT devices in the "PMA Features" section.</li> <li>Changed the datarates for GT devices in the "PCS Features" section.</li> </ul>
