### Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### Details

Product Status	Active
Number of LABs/CLBs	250540
Number of Logic Elements/Cells	660000
Total RAM Bits	49610752
Number of I/O	696
Number of Gates	-
Voltage - Supply	0.87V ~ 0.93V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 100°C (TJ)
Package / Case	1517-BBGA, FCBGA
Supplier Device Package	1517-FCBGA (40x40)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/intel/10ax066k4f40e3lg">https://www.e-xfl.com/product-detail/intel/10ax066k4f40e3lg</a>

## Intel® Arria® 10 Device Overview

The Intel® Arria® 10 device family consists of high-performance and power-efficient 20 nm mid-range FPGAs and SoCs.

Intel Arria 10 device family delivers:

- Higher performance than the previous generation of mid-range and high-end FPGAs.
- Power efficiency attained through a comprehensive set of power-saving technologies.

The Intel Arria 10 devices are ideal for high performance, power-sensitive, midrange applications in diverse markets.

**Table 1. Sample Markets and Ideal Applications for Intel Arria 10 Devices**

Market	Applications
Wireless	<ul style="list-style-type: none"> <li>• Channel and switch cards in remote radio heads</li> <li>• Mobile backhaul</li> </ul>
Wireline	<ul style="list-style-type: none"> <li>• 40G/100G muxponders and transponders</li> <li>• 100G line cards</li> <li>• Bridging</li> <li>• Aggregation</li> </ul>
Broadcast	<ul style="list-style-type: none"> <li>• Studio switches</li> <li>• Servers and transport</li> <li>• Videoconferencing</li> <li>• Professional audio and video</li> </ul>
Computing and Storage	<ul style="list-style-type: none"> <li>• Flash cache</li> <li>• Cloud computing servers</li> <li>• Server acceleration</li> </ul>
Medical	<ul style="list-style-type: none"> <li>• Diagnostic scanners</li> <li>• Diagnostic imaging</li> </ul>
Military	<ul style="list-style-type: none"> <li>• Missile guidance and control</li> <li>• Radar</li> <li>• Electronic warfare</li> <li>• Secure communications</li> </ul>

17.4 Gbps Transceiver		48	48	96	96
GPIO <sup>(3)</sup>		696	696	768	768
LVDS Pair <sup>(4)</sup>		324	324	384	384
PCIe Hard IP Block		2	2	4	4
Hard Memory Controller		16	16	16	16

## Package Plan

**Table 7. Package Plan for Intel Arria 10 GX Devices (U19, F27, and F29)**

Refer to I/O and High Speed I/O in Intel Arria 10 Devices chapter for the number of 3 V I/O, LVDS I/O, and LVDS channels in each device package.

Product Line	U19 (19 mm × 19 mm, 484-pin UBGA)			F27 (27 mm × 27 mm, 672-pin FBGA)			F29 (29 mm × 29 mm, 780-pin FBGA)		
	3 V I/O	LVDS I/O	XCVR	3 V I/O	LVDS I/O	XCVR	3 V I/O	LVDS I/O	XCVR
GX 160	48	192	6	48	192	12	48	240	12
GX 220	48	192	6	48	192	12	48	240	12
GX 270	—	—	—	48	192	12	48	312	12
GX 320	—	—	—	48	192	12	48	312	12
GX 480	—	—	—	—	—	—	48	312	12

## Maximum Resources

**Table 10. Maximum Resource Counts for Intel Arria 10 GT Devices**

Resource		Product Line	
		GT 900	GT 1150
Logic Elements (LE) (K)		900	1,150
ALM		339,620	427,200
Register		1,358,480	1,708,800
Memory (Kb)	M20K	48,460	54,260
	MLAB	9,386	12,984
Variable-precision DSP Block		1,518	1,518
18 x 19 Multiplier		3,036	3,036
PLL	Fractional Synthesis	32	32
	I/O	16	16
Transceiver	17.4 Gbps	72 <sup>(5)</sup>	72 <sup>(5)</sup>
	25.8 Gbps	6	6
GPIO <sup>(6)</sup>		624	624
LVDS Pair <sup>(7)</sup>		312	312
PCIe Hard IP Block		4	4
Hard Memory Controller		16	16

### Related Information

#### Intel Arria 10 GT Channel Usage

Configuring GT/GX channels in Intel Arria 10 GT devices.

## Package Plan

**Table 11. Package Plan for Intel Arria 10 GT Devices**

Refer to I/O and High Speed I/O in Intel Arria 10 Devices chapter for the number of 3 V I/O, LVDS I/O, and LVDS channels in each device package.

Product Line	SF45 (45 mm x 45 mm, 1932-pin FBGA)		
	3 V I/O	LVDS I/O	XCVR
GT 900	—	624	72
GT 1150	—	624	72

<sup>(5)</sup> If all 6 GT channels are in use, 12 of the GX channels are not usable.

<sup>(6)</sup> The number of GPIOs does not include transceiver I/Os. In the Intel Quartus Prime software, the number of user I/Os includes transceiver I/Os.

<sup>(7)</sup> Each LVDS I/O pair can be used as differential input or output.

## I/O Vertical Migration for Intel Arria 10 Devices

**Figure 4. Migration Capability Across Intel Arria 10 Product Lines**

- The arrows indicate the migration paths. The devices included in each vertical migration path are shaded. Devices with fewer resources in the same path have lighter shades.
- To achieve the full I/O migration across product lines in the same migration path, restrict I/Os and transceivers usage to match the product line with the lowest I/O and transceiver counts.
- An LVDS I/O bank in the source device may be mapped to a 3 V I/O bank in the target device. To use memory interface clock frequency higher than 533 MHz, assign external memory interface pins only to banks that are LVDS I/O in both devices.
- There may be nominal 0.15 mm package height difference between some product lines in the same package type.
- Some migration paths are not shown in the Intel Quartus Prime software **Pin Migration View**.

Variant	Product Line	Package										
		U19	F27	F29	F34	F35	KF40	NF40	RF40	NF45	SF45	UF45

	SX 480			↓	↑	↑						
	SX 570				↑	↑	↑	↑				
	SX 660				↑	↑	↑	↑				

**Note:** To verify the pin migration compatibility, use the **Pin Migration View** window in the Intel Quartus Prime software Pin Planner.

## Adaptive Logic Module

Intel Arria 10 devices use a 20 nm ALM as the basic building block of the logic fabric.

The ALM architecture is the same as the previous generation FPGAs, allowing for efficient implementation of logic functions and easy conversion of IP between the device generations.

The ALM, as shown in following figure, uses an 8-input fracturable look-up table (LUT) with four dedicated registers to help improve timing closure in register-rich designs and achieve an even higher design packing capability than the traditional two-register per LUT architecture.

Variant	Product Line	Variable-precision DSP Block	Independent Input and Output Multiplications Operator		18 x 19 Multiplier Adder Sum Mode	18 x 18 Multiplier Adder Summed with 36 bit Input
			18 x 19 Multiplier	27 x 27 Multiplier		
	SX 320	984	1,968	984	984	984
	SX 480	1,368	2,736	1,368	1,368	1,368
	SX 570	1,523	3,046	1,523	1,523	1,523
	SX 660	1,687	3,374	1,687	1,687	1,687

**Table 17. Resources for Floating-Point Arithmetic in Intel Arria 10 Devices**

The table lists the variable-precision DSP resources by bit precision for each Intel Arria 10 device.

Variant	Product Line	Variable-precision DSP Block	Single Precision Floating-Point Multiplication Mode	Single-Precision Floating-Point Adder Mode	Single-Precision Floating-Point Multiply Accumulate Mode	Peak Giga Floating-Point Operations per Second (GFLOPs)
Intel Arria 10 GX	GX 160	156	156	156	156	140

	SX 660	1,687	1,687	1,687	1,687	1,518

## Embedded Memory Blocks

The embedded memory blocks in the devices are flexible and designed to provide an optimal amount of small- and large-sized memory arrays to fit your design requirements.

- Series ( $R_S$ ) and parallel ( $R_T$ ) on-chip termination (OCT) for all I/O banks with OCT calibration to limit the termination impedance variation
- On-chip dynamic termination that has the ability to swap between series and parallel termination, depending on whether there is read or write on a common bus for signal integrity
- Easy timing closure support using the hard read FIFO in the input register path, and delay-locked loop (DLL) delay chain with fine and coarse architecture

## External Memory Interface

Intel Arria 10 devices offer massive external memory bandwidth, with up to seven 32-bit DDR4 memory interfaces running at up to 2,400 Mbps. This bandwidth provides additional ease of design, lower power, and resource efficiencies of hardened high-performance memory controllers.

The memory interface within Intel Arria 10 FPGAs and SoCs delivers the highest performance and ease of use. You can configure up to a maximum width of 144 bits when using the hard or soft memory controllers. If required, you can bypass the hard memory controller and use a soft controller implemented in the user logic.

Each I/O contains a hardened DDR read/write path (PHY) capable of performing key memory interface functionality such as read/write leveling, FIFO buffering to lower latency and improve margin, timing calibration, and on-chip termination.

The timing calibration is aided by the inclusion of hard microcontrollers based on Intel's Nios® II technology, specifically tailored to control the calibration of multiple memory interfaces. This calibration allows the Intel Arria 10 device to compensate for any changes in process, voltage, or temperature either within the Intel Arria 10 device itself, or within the external memory device. The advanced calibration algorithms ensure maximum bandwidth and robust timing margin across all operating conditions.

In addition to parallel memory interfaces, Intel Arria 10 devices support serial memory technologies such as the Hybrid Memory Cube (HMC). The HMC is supported by the Intel Arria 10 high-speed serial transceivers which connect up to four HMC links, with each link running at data rates up to 15 Gbps.

### Related Information

#### [External Memory Interface Spec Estimator](#)

Provides a parametric tool that allows you to find and compare the performance of the supported external memory interfaces in IntelFPGAs.

## Memory Standards Supported by Intel Arria 10 Devices

The I/Os are designed to provide high performance support for existing and emerging external memory standards.

**Table 20. Memory Standards Supported by the Hard Memory Controller**

This table lists the overall capability of the hard memory controller. For specific details, refer to the External Memory Interface Spec Estimator and Intel Arria 10 Device Datasheet.

Memory Standard	Rate Support	Ping Pong PHY Support	Maximum Frequency (MHz)
DDR4 SDRAM	Quarter rate	Yes	1,067
		—	1,200
DDR3 SDRAM	Half rate	Yes	533
		—	667
	Quarter rate	Yes	1,067
		—	1,067
DDR3L SDRAM	Half rate	Yes	533
		—	667
	Quarter rate	Yes	933
		—	933
LPDDR3 SDRAM	Half rate	—	533
	Quarter rate	—	800

**Table 21. Memory Standards Supported by the Soft Memory Controller**

Memory Standard	Rate Support	Maximum Frequency (MHz)
RLDRAM 3 <sup>(11)</sup>	Quarter rate	1,200
QDR IV SRAM <sup>(11)</sup>	Quarter rate	1,067
QDR II SRAM	Full rate	333
	Half rate	633
QDR II+ SRAM	Full rate	333
	Half rate	633
QDR II+ Xtreme SRAM	Full rate	333
	Half rate	633

**Table 22. Memory Standards Supported by the HPS Hard Memory Controller**

The hard processor system (HPS) is available in Intel Arria 10 SoC devices only.

Memory Standard	Rate Support	Maximum Frequency (MHz)
DDR4 SDRAM	Half rate	1,200
DDR3 SDRAM	Half rate	1,067
DDR3L SDRAM	Half rate	933

<sup>(11)</sup> Intel Arria 10 devices support this external memory interface using hard PHY with soft memory controller.

### **Related Information**

#### [Intel Arria 10 Device Datasheet](#)

Lists the memory interface performance according to memory interface standards, rank or chip select configurations, and Intel Arria 10 device speed grades.

## **PCIe Gen1, Gen2, and Gen3 Hard IP**

Intel Arria 10 devices contain PCIe hard IP that is designed for performance and ease-of-use:

- Includes all layers of the PCIe stack—transaction, data link and physical layers.
- Supports PCIe Gen3, Gen2, and Gen1 Endpoint and Root Port in x1, x2, x4, or x8 lane configuration.
- Operates independently from the core logic—optional configuration via protocol (CvP) allows the PCIe link to power up and complete link training in less than 100 ms while the Intel Arria 10 device completes loading the programming file for the rest of the FPGA.
- Provides added functionality that makes it easier to support emerging features such as Single Root I/O Virtualization (SR-IOV) and optional protocol extensions.
- Provides improved end-to-end datapath protection using ECC.
- Supports FPGA configuration via protocol (CvP) using PCIe at Gen3, Gen2, or Gen1 speed.

### **Related Information**

[PCS Features](#) on page 30

## **Enhanced PCS Hard IP for Interlaken and 10 Gbps Ethernet**

### **Interlaken Support**

The Intel Arria 10 enhanced PCS hard IP provides integrated Interlaken PCS supporting rates up to 25.8 Gbps per lane.

The Interlaken PCS is based on the proven functionality of the PCS developed for Intel's previous generation FPGAs, which demonstrated interoperability with Interlaken ASSP vendors and third-party IP suppliers. The Interlaken PCS is present in every transceiver channel in Intel Arria 10 devices.

### **Related Information**

[PCS Features](#) on page 30

### **10 Gbps Ethernet Support**

The Intel Arria 10 enhanced PCS hard IP supports 10GBASE-R PCS compliant with IEEE 802.3 10 Gbps Ethernet (10GbE). The integrated hard IP support for 10GbE and the 10 Gbps transceivers save external PHY cost, board space, and system power.

Each transceiver channel contains a channel PLL that can be used as the CMU PLL or clock data recovery (CDR) PLL. In CDR mode, the channel PLL recovers the receiver clock and data in the transceiver channel. Up to 80 independent data rates can be configured on a single Intel Arria 10 device.

**Table 23. PMA Features of the Transceivers in Intel Arria 10 Devices**

Feature	Capability
Chip-to-Chip Data Rates	1 Gbps to 17.4 Gbps (Intel Arria 10 GX devices) 1 Gbps to 25.8 Gbps (Intel Arria 10 GT devices)
Backplane Support	Drive backplanes at data rates up to 12.5 Gbps
Optical Module Support	SFP+/SFP, XFP, CXP, QSFP/QSFP28, CFP/CFP2/CFP4
Cable Driving Support	SFP+ Direct Attach, PCI Express over cable, eSATA
Transmit Pre-Emphasis	4-tap transmit pre-emphasis and de-emphasis to compensate for system channel loss
Continuous Time Linear Equalizer (CTLE)	Dual mode, high-gain, and high-data rate, linear receive equalization to compensate for system channel loss
Decision Feedback Equalizer (DFE)	7-fixed and 4-floating tap DFE to equalize backplane channel loss in the presence of crosstalk and noisy environments
Variable Gain Amplifier	Optimizes the signal amplitude prior to the CDR sampling and operates in fixed and adaptive modes
Altera Digital Adaptive Parametric Tuning (ADAPT)	Fully digital adaptation engine to automatically adjust all link equalization parameters—including CTLE, DFE, and variable gain amplifier blocks—that provide optimal link margin without intervention from user logic
Precision Signal Integrity Calibration Engine (PreSICE)	Hardened calibration controller to quickly calibrate all transceiver control parameters on power-up, which provides the optimal signal integrity and jitter performance
Advanced Transmit (ATX) PLL	Low jitter ATX (LC tank based) PLLs with continuous tuning range to cover a wide range of standard and proprietary protocols
Fractional PLLs	On-chip fractional frequency synthesizers to replace on-board crystal oscillators and reduce system cost
Digitally Assisted Analog CDR	Superior jitter tolerance with fast lock time
Dynamic Partial Reconfiguration	Allows independent control of the Avalon memory-mapped interface of each transceiver channel for the highest transceiver flexibility
Multiple PCS-PMA and PCS-PLD interface widths	8-, 10-, 16-, 20-, 32-, 40-, or 64-bit interface widths for flexibility of deserialization width, encoding, and reduced latency

## PCS Features

This table summarizes the Intel Arria 10 transceiver PCS features. You can use the transceiver PCS to support a wide range of protocols ranging from 1 Gbps to 25.8 Gbps.

**Table 24. Improvements in 20 nm HPS**

This table lists the key improvements of the 20 nm HPS compared to the 28 nm HPS.

Advantages/ Improvements	Description
Increased performance and overdrive capability	While the nominal processor frequency is 1.2 GHz, the 20 nm HPS offers an “overdrive” feature which enables a higher processor operating frequency. This requires a higher supply voltage value that is unique to the HPS and may require a separate regulator.
Increased processor memory bandwidth and DDR4 support	Up to 64-bit DDR4 memory at 2,400 Mbps support is available for the processor. The hard memory controller for the HPS comprises a multi-port front end that manages connections to a single port memory controller. The multi-port front end allows logic core and the HPS to share ports and thereby the available bandwidth of the memory controller.
Flexible I/O sharing	An advanced I/O pin muxing scheme allows improved sharing of I/O between the HPS and the core logic. The following types of I/O are available for SoC: <ul style="list-style-type: none"><li>• 17 dedicated I/Os—physically located inside the HPS block and are not accessible to logic within the core. The 17 dedicated I/Os are used for HPS clock, resets, and interfacing with boot devices, QSPI, and SD/MMC.</li><li>• 48 direct shared I/O—located closest to the HPS block and are ideal for high speed HPS peripherals such as EMAC, USB, and others. There is one bank of 48 I/Os that supports direct sharing where the 48 I/Os can be shared 12 I/Os at a time.</li><li>• Standard (shared) I/O—all standard I/Os can be shared by the HPS peripherals and any logic within the core. For designs where more than 48 I/Os are required to fully use all the peripherals in the HPS, these I/Os can be connected through the core logic.</li></ul>
EMAC core	Three EMAC cores are available in the HPS. The EMAC cores enable an application to support two redundant Ethernet connections; for example, backplane, or two EMAC cores for managing IEEE 1588 time stamp information while allowing a third EMAC core for debug and configuration. All three EMACs can potentially share the same time stamps, simplifying the 1588 time stamping implementation. A new serial time stamp interface allows core logic to access and read the time stamp values. The integrated EMAC controllers can be connected to external Ethernet PHY through the provided MDIO or I <sup>2</sup> C interface.
On-chip memory	The on-chip memory is updated to 256 KB support and can support larger data sets and real time algorithms.
ECC enhancements	Improvements in L2 Cache ECC management allow identification of errors down to the address level. ECC enhancements also enable improved error injection and status reporting via the introduction of new memory mapped access to syndrome and data signals.
HPS to FPGA Interconnect Backbone	Although the HPS and the Logic Core can operate independently, they are tightly coupled via a high-bandwidth system interconnect built from high-performance ARM AMBA AXI bus bridges. IP bus masters in the FPGA fabric have access to HPS bus slaves via the FPGA-to-HPS interconnect. Similarly, HPS bus masters have access to bus slaves in the core fabric via the HPS-to-FPGA bridge. Both bridges are AMBA AXI-3 compliant and support simultaneous read and write transactions. Up to three masters within the core fabric can share the HPS SDRAM controller with the processor. Additionally, the processor can be used to configure the core fabric under program control via a dedicated 32-bit configuration port.
FPGA configuration and HPS booting	The FPGA fabric and HPS in the SoCs are powered independently. You can reduce the clock frequencies or gate the clocks to reduce dynamic power. You can configure the FPGA fabric and boot the HPS independently, in any order, providing you with more design flexibility.
Security	New security features have been introduced for anti-tamper management, secure boot, encryption (AES), and authentication (SHA).

## System Peripherals and Debug Access Port

Each Ethernet MAC, USB OTG, NAND flash controller, and SD/MMC controller module has an integrated DMA controller. For modules without an integrated DMA controller, an additional DMA controller module provides up to eight channels of high-bandwidth data transfers. Peripherals that communicate off-chip are multiplexed with other peripherals at the HPS pin level. This allows you to choose which peripherals interface with other devices on your PCB.

The debug access port provides interfaces to industry standard JTAG debug probes and supports ARM CoreSight debug and core traces to facilitate software development.

## HPS-FPGA AXI Bridges

The HPS-FPGA bridges, which support the Advanced Microcontroller Bus Architecture (AMBA) Advanced eXtensible Interface (AXI™) specifications, consist of the following bridges:

- FPGA-to-HPS AMBA AXI bridge—a high-performance bus supporting 32, 64, and 128 bit data widths that allows the FPGA fabric to issue transactions to slaves in the HPS.
- HPS-to-FPGA Avalon/AMBA AXI bridge—a high-performance bus supporting 32, 64, and 128 bit data widths that allows the HPS to issue transactions to slaves in the FPGA fabric.
- Lightweight HPS-to-FPGA AXI bridge—a lower latency 32 bit width bus that allows the HPS to issue transactions to soft peripherals in the FPGA fabric. This bridge is primarily used for control and status register (CSR) accesses to peripherals in the FPGA fabric.

The HPS-FPGA AXI bridges allow masters in the FPGA fabric to communicate with slaves in the HPS logic, and vice versa. For example, the HPS-to-FPGA AXI bridge allows you to share memories instantiated in the FPGA fabric with one or both microprocessors in the HPS, while the FPGA-to-HPS AXI bridge allows logic in the FPGA fabric to access the memory and peripherals in the HPS.

Each HPS-FPGA bridge also provides asynchronous clock crossing for data transferred between the FPGA fabric and the HPS.

## HPS SDRAM Controller Subsystem

The HPS SDRAM controller subsystem contains a multiport SDRAM controller and DDR PHY that are shared between the FPGA fabric (through the FPGA-to-HPS SDRAM interface), the level 2 (L2) cache, and the level 3 (L3) system interconnect. The FPGA-to-HPS SDRAM interface supports AMBA AXI and Avalon® Memory-Mapped (Avalon-MM) interface standards, and provides up to six individual ports for access by masters implemented in the FPGA fabric.

The HPS SDRAM controller supports up to 3 masters (command ports), 3x 64-bit read data ports and 3x 64-bit write data ports.

To maximize memory performance, the SDRAM controller subsystem supports command and data reordering, deficit round-robin arbitration with aging, and high-priority bypass features.

Scheme	Data Width	Max Clock Rate (MHz)	Max Data Rate (Mbps) <sup>(13)</sup>	Decompression	Design Security <sup>(14)</sup>	Partial Reconfiguration <sup>(15)</sup>	Remote System Update
Fast passive parallel (FPP) through CPLD or external microcontroller	8 bits	100	3200	Yes	Yes	Yes <sup>(17)</sup>	PFL IP core
	16 bits			Yes	Yes		
	32 bits			Yes	Yes		
Configuration via HPS	16 bits	100	3200	Yes	Yes	Yes <sup>(17)</sup>	—
	32 bits			Yes	Yes		
Configuration via Protocol [CvP (PCIe*)]	x1, x2, x4, x8 lanes	—	8000	Yes	Yes	Yes <sup>(16)</sup>	—

You can configure Intel Arria 10 devices through PCIe using Configuration via Protocol (CvP). The Intel Arria 10 CvP implementation conforms to the PCIe 100 ms power-up-to-active time requirement.

## SEU Error Detection and Correction

Intel Arria 10 devices offer robust and easy-to-use single-event upset (SEU) error detection and correction circuitry.

The detection and correction circuitry includes protection for Configuration RAM (CRAM) programming bits and user memories. The CRAM is protected by a continuously running CRC error detection circuit with integrated ECC that automatically corrects one or two errors and detects higher order multi-bit errors. When more than two errors occur, correction is available through reloading of the core programming file, providing a complete design refresh while the FPGA continues to operate.

The physical layout of the Intel Arria 10 CRAM array is optimized to make the majority of multi-bit upsets appear as independent single-bit or double-bit errors which are automatically corrected by the integrated CRAM ECC circuitry. In addition to the CRAM protection, the M20K memory blocks also include integrated ECC circuitry and are layout-optimized for error detection and correction. The MLAB does not have ECC.

## Power Management

Intel Arria 10 devices leverage the advanced 20 nm process technology, a low 0.9 V core power supply, an enhanced core architecture, and several optional power reduction techniques to reduce total power consumption by as much as 40% compared to Arria V devices and as much as 60% compared to Stratix V devices.

<sup>(13)</sup> Enabling either compression or design security features affects the maximum data rate. Refer to the Intel Arria 10 Device Datasheet for more information.

<sup>(14)</sup> Encryption and compression cannot be used simultaneously.

<sup>(15)</sup> Partial reconfiguration is an advanced feature of the device family. If you are interested in using partial reconfiguration, contact Intel for support.

<sup>(17)</sup> Supported at a maximum clock rate of 100 MHz.

The optional power reduction techniques in Intel Arria 10 devices include:

- **SmartVID**—a code is programmed into each device during manufacturing that allows a smart regulator to operate the device at lower core  $V_{CC}$  while maintaining performance
- **Programmable Power Technology**—non-critical timing paths are identified by the Intel Quartus Prime software and the logic in these paths is biased for low power instead of high performance
- **Low Static Power Options**—devices are available with either standard static power or low static power while maintaining performance

Furthermore, Intel Arria 10 devices feature Intel's industry-leading low power transceivers and include a number of hard IP blocks that not only reduce logic resources but also deliver substantial power savings compared to soft implementations. In general, hard IP blocks consume up to 90% less power than the equivalent soft logic implementations.

## Incremental Compilation

The Intel Quartus Prime software incremental compilation feature reduces compilation time and helps preserve performance to ease timing closure. The incremental compilation feature enables the partial reconfiguration flow for Intel Arria 10 devices.

Incremental compilation supports top-down, bottom-up, and team-based design flows. This feature facilitates modular, hierarchical, and team-based design flows where different designers compile their respective design sections in parallel. Furthermore, different designers or IP providers can develop and optimize different blocks of the design independently. These blocks can then be imported into the top level project.

## Document Revision History for Intel Arria 10 Device Overview

Document Version	Changes
2018.04.09	Updated the lowest $V_{CC}$ from 0.83 V to 0.82 V in the topic listing a summary of the device features.

Date	Version	Changes
January 2018	2018.01.17	<ul style="list-style-type: none"><li>• Updated the maximum data rate for HPS (Intel Arria 10 SX devices external memory interface DDR3 controller from 2,166 Mbps to 2,133 Mbps.</li><li>• Updated maximum frequency supported for half rate QDR II and QDR II + SRAM to 633 MHz in <i>Memory Standards Supported by the Soft Memory Controller</i> table.</li><li>• Updated transceiver backplane capability to 12.5 Gbps.</li><li>• Removed transceiver speed grade 5 in <i>Sample Ordering Core and Available Options for Intel Arria 10 GX Devices</i> figure.</li></ul>
continued...		

Date	Version	Changes
		<ul style="list-style-type: none"> <li>Removed package code 40, low static power, SmartVID, industrial, and military operating temperature support from <i>Sample Ordering Core and Available Options for Intel Arria 10 GT Devices</i> figure.</li> <li>Updated short reach transceiver rate for Intel Arria 10 GT devices to 25.8 Gbps.</li> <li>Removed On-Die Instrumentation — EyeQ and Jitter Margin Tool support from <i>PMA Features of the Transceivers in Intel Arria 10 Devices</i> table.</li> </ul>
September 2017	2017.09.20	Updated the maximum speed of the DDR4 external memory interface from 1,333 MHz/2,666 Mbps to 1,200 MHz/2,400 Mbps.
July 2017	2017.07.13	Corrected the automotive temperature range in the figure showing the available options for the Intel Arria 10 GX devices from "-40°C to 100°C" to "-40°C to 125°C".
July 2017	2017.07.06	Added automotive temperature option to Intel Arria 10 GX device family.
May 2017	2017.05.08	<ul style="list-style-type: none"> <li>Corrected protocol names with "1588" to "IEEE 1588v2".</li> <li>Updated the vertical migration table to remove vertical migration between Intel Arria 10 GX and Intel Arria 10 SX device variants.</li> <li>Removed all "Preliminary" marks.</li> </ul>
March 2017	2017.03.15	<ul style="list-style-type: none"> <li>Removed the topic about migration from Intel Arria 10 to Intel Stratix 10 devices.</li> <li>Rebranded as Intel.</li> </ul>
October 2016	2016.10.31	<ul style="list-style-type: none"> <li>Removed package F36 from Intel Arria 10 GX devices.</li> <li>Updated Intel Arria 10 GT sample ordering code and maximum GX transceiver count. Intel Arria 10 GT devices are available only in the SF45 package option with a maximum of 72 transceivers.</li> </ul>
May 2016	2016.05.02	<ul style="list-style-type: none"> <li>Updated the FPGA Configuration and HPS Booting topic.</li> <li>Remove V<sub>CC</sub> PowerManager from the Summary of Features, Power Management and Arria 10 Device Variants and packages topics. This feature is no longer supported in Arria 10 devices.</li> <li>Removed LPDDR3 from the Memory Standards Supported by the HPS Hard Memory Controller table in the Memory Standards Supported by Intel Arria 10 Devices topic. This standard is only supported by the FPGA.</li> <li>Removed transceiver speed grade 5 from the Device Variants and Packages topic for Arria 10 GX and SX devices.</li> </ul>
February 2016	2016.02.11	<ul style="list-style-type: none"> <li>Changed the maximum Arria 10 GT datarate to 25.8 Gbps and the minimum datarate to 1 Gbps globally.</li> <li>Revised the state for Core clock networks in the Summary of Features topic.</li> <li>Changed the transceiver parameters in the "Summary of Features for Arria 10 Devices" table.</li> <li>Changed the transceiver parameters in the "Maximum Resource Counts for Arria 10 GT Devices" table.</li> <li>Changed the package availability for GT devices in the "Package Plan for Arria 10 GT Devices" table.</li> <li>Changed the package configurations for GT devices in the "Migration Capability Across Arria 10 Product Lines" figure.</li> <li>Changed transceiver parameters in the "Low Power Serial Transceivers" section.</li> <li>Changed the transceiver descriptions in the "Device Variants for the Arria 10 Device Family" table.</li> <li>Changed the "Sample Ordering Code and Available Options for Arria 10 GT Devices" figure.</li> <li>Changed the datarates for GT devices in the "PMA Features" section.</li> <li>Changed the datarates for GT devices in the "PCS Features" section.</li> </ul>
