Welcome to [E-XFL.COM](#)

Understanding [Embedded - FPGAs (Field Programmable Gate Array)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

Details

Product Status	Discontinued at Digi-Key
Number of LABs/CLBs	250540
Number of Logic Elements/Cells	660000
Total RAM Bits	49610752
Number of I/O	588
Number of Gates	-
Voltage - Supply	0.87V ~ 0.93V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	1517-BBGA, FCBGA
Supplier Device Package	1517-FCBGA (40x40)
Purchase URL	https://www.e-xfl.com/product-detail/intel/10ax066n3f40i2sges

Feature	Description
	• Dynamic reconfiguration of the transceivers and PLLs • Fine-grained partial reconfiguration of the core fabric • Active Serial x4 Interface
Power management	• SmartVID • Low static power device options • Programmable Power Technology • Intel Quartus Prime integrated power analysis
Software and tools	• Intel Quartus Prime design suite • Transceiver toolkit • Platform Designer system integration tool • DSP Builder for Intel FPGAs • OpenCL™ support • Intel SoC FPGA Embedded Design Suite (EDS)

Intel Arria 10 Device Variants and Packages

Table 4.   Device Variants for the Intel Arria 10 Device Family

Variant	Description
Intel Arria 10 GX	FPGA featuring 17.4 Gbps transceivers for short reach applications with 12.5 backplane driving capability.
Intel Arria 10 GT	FPGA featuring: • 17.4 Gbps transceivers for short reach applications with 12.5 backplane driving capability. • 25.8 Gbps transceivers for supporting CAUI-4 and CEI-25G applications with CFP2 and CFP4 modules.
Intel Arria 10 SX	SoC integrating ARM-based HPS and FPGA featuring 17.4 Gbps transceivers for short reach applications with 12.5 backplane driving capability.

I/O Vertical Migration for Intel Arria 10 Devices

Figure 4. **Migration Capability Across Intel Arria 10 Product Lines**

- The arrows indicate the migration paths. The devices included in each vertical migration path are shaded. Devices with fewer resources in the same path have lighter shades.

- To achieve the full I/O migration across product lines in the same migration path, restrict I/Os and transceivers usage to match the product line with the lowest I/O and transceiver counts.

- An LVDS I/O bank in the source device may be mapped to a 3 V I/O bank in the target device. To use memory interface clock frequency higher than 533 MHz, assign external memory interface pins only to banks that are LVDS I/O in both devices.

- There may be nominal 0.15 mm package height difference between some product lines in the same package type.

- Some migration paths are not shown in the Intel Quartus Prime software **Pin Migration View**.

Adaptive Logic Module

Intel Arria 10 devices use a 20 nm ALM as the basic building block of the logic fabric.

The ALM architecture is the same as the previous generation FPGAs, allowing for efficient implementation of logic functions and easy conversion of IP between the device generations.

The ALM, as shown in following figure, uses an 8-input fracturable look-up table (LUT) with four dedicated registers to help improve timing closure in register-rich designs and achieve an even higher design packing capability than the traditional two-register per LUT architecture.

Embedded Memory Blocks

The embedded memory blocks in the devices are flexible and designed to provide an optimal amount of small- and large-sized memory arrays to fit your design requirements.

Types of Embedded Memory

The Intel Arria 10 devices contain two types of memory blocks:

- 20 Kb M20K blocks—blocks of dedicated memory resources. The M20K blocks are ideal for larger memory arrays while still providing a large number of independent ports.

- 640 bit memory logic array blocks (MLABs)—enhanced memory blocks that are configured from dual-purpose logic array blocks (LABs). The MLABs are ideal for wide and shallow memory arrays. The MLABs are optimized for implementation of shift registers for digital signal processing (DSP) applications, wide and shallow FIFO buffers, and filter delay lines. Each MLAB is made up of ten adaptive logic modules (ALMs). In the Intel Arria 10 devices, you can configure these ALMs as ten 32 x 2 blocks, giving you one 32 x 20 simple dual-port SRAM block per MLAB.

Embedded Memory Capacity in Intel Arria 10 Devices

Table 20.   Memory Standards Supported by the Hard Memory Controller

This table lists the overall capability of the hard memory controller. For specific details, refer to the External Memory Interface Spec Estimator and Intel Arria 10 Device Datasheet.

Memory Standard	Rate Support	Ping Pong PHY Support	Maximum Frequency (MHz)
DDR4 SDRAM	Quarter rate	Yes	1,067
		—	1,200
DDR3 SDRAM	Half rate	Yes	533
		—	667
	Quarter rate	Yes	1,067
		—	1,067
DDR3L SDRAM	Half rate	Yes	533
		—	667
	Quarter rate	Yes	933
		—	933
LPDDR3 SDRAM	Half rate	—	533
	Quarter rate	—	800

Table 21.   Memory Standards Supported by the Soft Memory Controller

Memory Standard	Rate Support	Maximum Frequency (MHz)
RLDRAM 3 [11]	Quarter rate	1,200
QDR IV SRAM[11]	Quarter rate	1,067
QDR II SRAM	Full rate	333
	Half rate	633
QDR II+ SRAM	Full rate	333
	Half rate	633
QDR II+ Xtreme SRAM	Full rate	333
	Half rate	633

Table 22.   Memory Standards Supported by the HPS Hard Memory Controller

The hard processor system (HPS) is available in Intel Arria 10 SoC devices only.

Memory Standard	Rate Support	Maximum Frequency (MHz)
DDR4 SDRAM	Half rate	1,200
DDR3 SDRAM	Half rate	1,067
DDR3L SDRAM	Half rate	933

---

[11] Intel Arria 10 devices support this external memory interface using hard PHY with soft memory controller.

PMA Features

Intel Arria 10 transceivers provide exceptional signal integrity at data rates up to 25.8 Gbps. Clocking options include ultra-low jitter ATX PLLs (LC tank based), clock multiplier unit (CMU) PLLs, and fractional PLLs.

Each transceiver channel contains a channel PLL that can be used as the CMU PLL or clock data recovery (CDR) PLL. In CDR mode, the channel PLL recovers the receiver clock and data in the transceiver channel. Up to 80 independent data rates can be configured on a single Intel Arria 10 device.

Table 23.   PMA Features of the Transceivers in Intel Arria 10 Devices

Feature	Capability
Chip-to-Chip Data Rates	1 Gbps to 17.4 Gbps (Intel Arria 10 GX devices) 1 Gbps to 25.8 Gbps (Intel Arria 10 GT devices)
Backplane Support	Drive backplanes at data rates up to 12.5 Gbps
Optical Module Support	SFP+/SFP, XFP, CXP, QSFP/QSFP28, CFP/CFP2/CFP4
Cable Driving Support	SFP+ Direct Attach, PCI Express over cable, eSATA
Transmit Pre-Emphasis	4-tap transmit pre-emphasis and de-emphasis to compensate for system channel loss
Continuous Time Linear Equalizer (CTLE)	Dual mode, high-gain, and high-data rate, linear receive equalization to compensate for system channel loss
Decision Feedback Equalizer (DFE)	7-fixed and 4-floating tap DFE to equalize backplane channel loss in the presence of crosstalk and noisy environments
Variable Gain Amplifier	Optimizes the signal amplitude prior to the CDR sampling and operates in fixed and adaptive modes
Altera Digital Adaptive Parametric Tuning (ADAPT)	Fully digital adaptation engine to automatically adjust all link equalization parameters—including CTLE, DFE, and variable gain amplifier blocks—that provide optimal link margin without intervention from user logic
Precision Signal Integrity Calibration Engine (PreSICE)	Hardened calibration controller to quickly calibrate all transceiver control parameters on power-up, which provides the optimal signal integrity and jitter performance
Advanced Transmit (ATX) PLL	Low jitter ATX (LC tank based) PLLs with continuous tuning range to cover a wide range of standard and proprietary protocols
Fractional PLLs	On-chip fractional frequency synthesizers to replace on-board crystal oscillators and reduce system cost
Digitally Assisted Analog CDR	Superior jitter tolerance with fast lock time
Dynamic Partial Reconfiguration	Allows independent control of the Avalon memory-mapped interface of each transceiver channel for the highest transceiver flexibility
Multiple PCS-PMA and PCS-PLD interface widths	8-, 10-, 16-, 20-, 32-, 40-, or 64-bit interface widths for flexibility of deserialization width, encoding, and reduced latency

PCS Features

This table summarizes the Intel Arria 10 transceiver PCS features. You can use the transceiver PCS to support a wide range of protocols ranging from 1 Gbps to 25.8 Gbps.

Protocol	Data Rate (Gbps)	Transceiver IP	PCS Support
CPRI 6.0 (64B/66B)	0.6144 to 10.1376	Native PHY	Enhanced PCS
CPRI 4.2 (8B/10B)	0.6144 to 9.8304	Native PHY	Standard PCS
OBSAI RP3 v4.2	0.6144 to 6.144	Native PHY	Standard PCS
SD-SDI/HD-SDI/3G-SDI	0.143[12] to 2.97	Native PHY	Standard PCS

Provides more information about the supported transceiver protocols and PHY IP, the PMA architecture, and the standard, enhanced, and PCIe Gen3 PCS architecture.

SoC with Hard Processor System

Each SoC device combines an FPGA fabric and a hard processor system (HPS) in a single device. This combination delivers the flexibility of programmable logic with the power and cost savings of hard IP in these ways:

- Reduces board space, system power, and bill of materials cost by eliminating a discrete embedded processor

- Allows you to differentiate the end product in both hardware and software, and to support virtually any interface standard

- Extends the product life and revenue through in-field hardware and software updates

---

[12] The 0.143 Gbps data rate is supported using oversampling of user logic that you must implement in the FPGA fabric.

Figure 9. **HPS Block Diagram**

This figure shows a block diagram of the HPS with the dual ARM Cortex-A9 MPCore processor.

Key Advantages of 20-nm HPS

The 20-nm HPS strikes a balance between enabling maximum software compatibility with 28-nm SoCs while still improving upon the 28-nm HPS architecture. These improvements address the requirements of the next generation target markets such as wireless and wireline communications, compute and storage equipment, broadcast and military in terms of performance, memory bandwidth, connectivity via backplane and security.

Features of the HPS

The HPS has the following features:

- 1.2-GHz, dual-core ARM Cortex-A9 MPCore processor with up to 1.5-GHz via overdrive
    - ARMv7-A architecture that runs 32-bit ARM instructions, 16-bit and 32-bit Thumb instructions, and 8-bit Java byte codes in Jazelle style
    - Superscalar, variable length, out-of-order pipeline with dynamic branch prediction
    - Instruction Efficiency 2.5 MIPS/MHz, which provides total performance of 7500 MIPS at 1.5 GHz
- Each processor core includes:
    - 32 KB of L1 instruction cache, 32 KB of L1 data cache
    - Single- and double-precision floating-point unit and NEON media engine
    - CoreSight debug and trace technology
    - Snoop Control Unit (SCU) and Acceleration Coherency Port (ACP)
- 512 KB of shared L2 cache
- 256 KB of scratch RAM
- Hard memory controller with support for DDR3, DDR4 and optional error correction code (ECC) support
- Multiport Front End (MPFE) Scheduler interface to the hard memory controller
- 8-channel direct memory access (DMA) controller
- QSPI flash controller with SIO, DIO, QIO SPI Flash support
- NAND flash controller (ONFI 1.0 or later) with DMA and ECC support, updated to support 8 and 16-bit Flash devices and new command DMA to offload CPU for fast power down recovery
- Updated SD/SDIO/MMC controller to eMMC 4.5 with DMA with CE-ATA digital command support
- 3 10/100/1000 Ethernet media access control (MAC) with DMA
- 2 USB On-the-Go (OTG) controllers with DMA
- 5 I^{2}C controllers (3 can be used by EMAC for MIO to external PHY)
- 2 UART 16550 Compatible controllers
- 4 serial peripheral interfaces (SPI) (2 Master, 2 Slaves)
- 62 programmable general-purpose I/Os, which includes 48 direct share I/Os that allows the HPS peripherals to connect directly to the FPGA I/Os
- 7 general-purpose timers
- 4 watchdog timers
- Anti-tamper, Secure Boot, Encryption (AES) and Authentication (SHA)

System Peripherals and Debug Access Port

Each Ethernet MAC, USB OTG, NAND flash controller, and SD/MMC controller module has an integrated DMA controller. For modules without an integrated DMA controller, an additional DMA controller module provides up to eight channels of high-bandwidth data transfers. Peripherals that communicate off-chip are multiplexed with other peripherals at the HPS pin level. This allows you to choose which peripherals interface with other devices on your PCB.

The debug access port provides interfaces to industry standard JTAG debug probes and supports ARM CoreSight debug and core traces to facilitate software development.

HPS–FPGA AXI Bridges

The HPS–FPGA bridges, which support the Advanced Microcontroller Bus Architecture (AMBA) Advanced eXtensible Interface (AXI™) specifications, consist of the following bridges:

- FPGA-to-HPS AMBA AXI bridge—a high-performance bus supporting 32, 64, and 128 bit data widths that allows the FPGA fabric to issue transactions to slaves in the HPS.

- HPS-to-FPGA Avalon/AMBA AXI bridge—a high-performance bus supporting 32, 64, and 128 bit data widths that allows the HPS to issue transactions to slaves in the FPGA fabric.

- Lightweight HPS-to-FPGA AXI bridge—a lower latency 32 bit width bus that allows the HPS to issue transactions to soft peripherals in the FPGA fabric. This bridge is primarily used for control and status register (CSR) accesses to peripherals in the FPGA fabric.

The HPS–FPGA AXI bridges allow masters in the FPGA fabric to communicate with slaves in the HPS logic, and vice versa. For example, the HPS-to-FPGA AXI bridge allows you to share memories instantiated in the FPGA fabric with one or both microprocessors in the HPS, while the FPGA-to-HPS AXI bridge allows logic in the FPGA fabric to access the memory and peripherals in the HPS.

Each HPS–FPGA bridge also provides asynchronous clock crossing for data transferred between the FPGA fabric and the HPS.

HPS SDRAM Controller Subsystem

The HPS SDRAM controller subsystem contains a multiport SDRAM controller and DDR PHY that are shared between the FPGA fabric (through the FPGA-to-HPS SDRAM interface), the level 2 (L2) cache, and the level 3 (L3) system interconnect. The FPGA-to-HPS SDRAM interface supports AMBA AXI and Avalon® Memory-Mapped (Avalon-MM) interface standards, and provides up to six individual ports for access by masters implemented in the FPGA fabric.

The HPS SDRAM controller supports up to 3 masters (command ports), 3x 64-bit read data ports and 3x 64-bit write data ports.

To maximize memory performance, the SDRAM controller subsystem supports command and data reordering, deficit round-robin arbitration with aging, and high-priority bypass features.

The optional power reduction techniques in Intel Arria 10 devices include:

- **SmartVID**—a code is programmed into each device during manufacturing that allows a smart regulator to operate the device at lower core V_{CC} while maintaining performance

- **Programmable Power Technology**—non-critical timing paths are identified by the Intel Quartus Prime software and the logic in these paths is biased for low power instead of high performance

- **Low Static Power Options**—devices are available with either standard static power or low static power while maintaining performance

Furthermore, Intel Arria 10 devices feature Intel's industry-leading low power transceivers and include a number of hard IP blocks that not only reduce logic resources but also deliver substantial power savings compared to soft implementations. In general, hard IP blocks consume up to 90% less power than the equivalent soft logic implementations.

Incremental Compilation

The Intel Quartus Prime software incremental compilation feature reduces compilation time and helps preserve performance to ease timing closure. The incremental compilation feature enables the partial reconfiguration flow for Intel Arria 10 devices.

Incremental compilation supports top-down, bottom-up, and team-based design flows. This feature facilitates modular, hierarchical, and team-based design flows where different designers compile their respective design sections in parallel. Furthermore, different designers or IP providers can develop and optimize different blocks of the design independently. These blocks can then be imported into the top level project.

Document Revision History for Intel Arria 10 Device Overview

Document Version	Changes
2018.04.09	Updated the lowest V_{CC} from 0.83 V to 0.82 V in the topic listing a summary of the device features.

Date	Version	Changes
January 2018	2018.01.17	• Updated the maximum data rate for HPS (Intel Arria 10 SX devices external memory interface DDR3 controller from 2,166 Mbps to 2,133 Mbps. • Updated maximum frequency supported for half rate QDRII and QDRII + SRAM to 633 MHz in *Memory Standards Supported by the Soft Memory Controller* table. • Updated transceiver backplane capability to 12.5 Gbps. • Removed transceiver speed grade 5 in *Sample Ordering Core and Available Options for Intel Arria 10 GX Devices* figure.
		continued...

Date	Version	Changes
December 2015	2015.12.14	• Updated the number of M20K memory blocks for Arria 10 GX 660 from 2133 to 2131 and corrected the total RAM bit from 48,448 Kb to 48,408 Kb. • Corrected the number of DSP blocks for Arria 10 GX 660 from 1688 to 1687 in the table listing floating-point arithmetic resources.
November 2015	2015.11.02	• Updated the maximum resources for Arria 10 GX 220, GX 320, GX 480, GX 660, SX 220, SX 320, SX 480, and SX 660. • Updated resource count for Arria 10 GX 320, GX 480, GX 660, SX 320, SX 480, a SX 660 devices in **Number of Multipliers in Intel Arria 10 Devices** table. • Updated the available options for Arria 10 GX, GT, and SX. • Changed instances of *Quartus II* to *Quartus Prime*.
June 2015	2015.06.15	Corrected label for Intel Arria 10 GT product lines in the vertical migration figure.
May 2015	2015.05.15	Corrected the DDR3 half rate and quarter rate maximum frequencies in the table that lists the memory standards supported by the Intel Arria 10 hard memory controller.
May 2015	2015.05.04	• Added support for 13.5G JESD204b in the Summary of Features table. • Added a link to Arria 10 GT Channel Usage in the Arria 10 GT Package Plan topic. • Added a note to the table, Maximum Resource Counts for Arria 10 GT devices. • Updated the power requirements of the transceivers in the Low Power Serial Transceivers topic.
January 2015	2015.01.23	• Added floating point arithmetic features in the Summary of Features table. • Updated the total embedded memory from 38.38 megabits (Mb) to 65.6 Mb. • Updated the table that lists the memory standards supported by Intel Arria 10 devices. • Removed support for DDR3U, LPDDR3 SDRAM, RLDRAM 2, and DDR2. • Moved RLDRAM 3 support from hard memory controller to soft memory controller. RLDRAM 3 support uses hard PHY with soft memory controller. • Added soft memory controller support for QDR IV. • Updated the maximum resource count table to include the number of hard memory controllers available in each device variant. • Updated the transceiver PCS data rate from 12.5 Gbps to 12 Gbps. • Updated the max clock rate of PS, FPP x8, FPP x16, and Configuration via HPS from 125 MHz to 100 MHz. • Added a feature for fractional synthesis PLLs: PLL cascading. • Updated the HPS programmable general-purpose I/Os from 54 to 62.
September 2014	2014.09.30	• Corrected the 3 V I/O and LVDS I/O counts for F35 and F36 packages of Arria 10 GX. • Corrected the 3 V I/O, LVDS I/O, and transceiver counts for the NF40 package of the Arria GX 570 and 660. • Removed 3 V I/O, LVDS I/O, and transceiver counts for the NF40 package of the Arria GX 900 and 1150. The NF40 package is not available for Arria 10 GX 900 and 1150.
