
Welcome to E-XFL.COM

Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details	
Product Status	Active
Number of LABs/CLBs	6036
Number of Logic Elements/Cells	-
Total RAM Bits	-
Number of I/O	203
Number of Gates	108000
Voltage - Supply	2.25V ~ 5.25V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 70°C (TA)
Package / Case	256-BFCQFP with Tie Bar
Supplier Device Package	256-CQFP (75x75)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/a54sx72a-1cq256

Other Architectural Features

Technology

The Actel SX-A family is implemented on a high-voltage, twin-well CMOS process using 0.22 µ / 0.25 µ design rules. The metal-to-metal antifuse is comprised of a combination of amorphous silicon and dielectric material with barrier metals and has a programmed ('on' state) resistance of 25 Ω with capacitance of 1.0 fF for low signal impedance.

Performance

The unique architectural features of the SX-A family enable the devices to operate with internal clock frequencies of 350 MHz, causing very fast execution of even complex logic functions. The SX-A family is an optimal platform upon which to integrate the functionality previously contained in multiple complex programmable logic devices (CPLDs). In addition, designs that previously would have required a gate array to meet performance goals can be integrated into an SX-A device with dramatic improvements in cost and time-to-market. Using timing-driven place-and-route tools, designers can achieve highly deterministic device performance.

User Security

Reverse engineering is virtually impossible in SX-A devices because it is extremely difficult to distinguish between programmed and unprogrammed antifuses. In addition, since SX-A is a nonvolatile, single-chip solution, there is no configuration bitstream to intercept at device power-up.

The Actel FuseLock advantage ensures that unauthorized users will not be able to read back the contents of an Actel antifuse FPGA. In addition to the inherent strengths of the architecture, special security fuses that prevent internal probing and overwriting are hidden throughout the fabric of the device. They are located where they cannot be accessed or bypassed without destroying access to the rest of the device, making both invasive and more-subtle noninvasive attacks ineffective against Actel antifuse FPGAs.

Look for this symbol to ensure your valuable IP is secure (Figure 1-11).

Figure 1-11 • **FuseLock**

For more information, refer to Actel's *Implementation of Security in Actel Antifuse FPGAs* application note.

I/O Modules

For a simplified I/O schematic, refer to Figure 1 in the application note, *Actel eX, SX-A, and RTSX-S I/Os*.

Each user I/O on an SX-A device can be configured as an input, an output, a tristate output, or a bidirectional pin. Mixed I/O standards can be set for individual pins, though this is only allowed with the same voltage as the input. These I/Os, combined with array registers, can achieve clock-to-output-pad timing as fast as 3.8 ns, even without the dedicated I/O registers. In most FPGAs, I/O cells that have embedded latches and flip-flops, requiring instantiation in HDL code; this is a design complication not encountered in SX-A FPGAs. Fast pin-to-pin timing ensures that the device is able to interface with any other device in the system, which in turn enables parallel design of system components and reduces overall design time. All unused I/Os are configured as tristate outputs by the Actel Designer software, for maximum flexibility when designing new boards or migrating existing designs.

SX-A I/Os should be driven by high-speed push-pull devices with a low-resistance pull-up device when being configured as tristate output buffers. If the I/O is driven by a voltage level greater than V_{CCI} and a fast push-pull device is NOT used, the high-resistance pull-up of the driver and the internal circuitry of the SX-A I/O may create a voltage divider. This voltage divider could pull the input voltage below specification for some devices connected to the driver. A logic '1' may not be correctly presented in this case. For example, if an open drain driver is used with a pull-up resistor to 5 V to provide the logic '1' input, and V_{CCI} is set to 3.3 V on the SX-A device, the input signal may be pulled down by the SX-A input.

Each I/O module has an available power-up resistor of approximately 50 kΩ that can configure the I/O in a known state during power-up. For nominal pull-up and pull-down resistor values, refer to Table 1-4 on page 1-8 of the application note *Actel eX, SX-A, and RTSX-S I/Os*. Just slightly before V_{CCA} reaches 2.5 V, the resistors are disabled, so the I/Os will be controlled by user logic. See Table 1-2 on page 1-8 and Table 1-3 on page 1-8 for more information concerning available I/O features.

To determine the heat sink's thermal performance, use the following equation:

$$\theta_{JA(TOTAL)} = \theta_{JC} + \theta_{CS} + \theta_{SA}$$

EQ 2-14

where:

θ_{CS} = 0.37°C/W
= thermal resistance of the interface material between the case and the heat sink, usually provided by the thermal interface manufacturer

θ_{SA} = thermal resistance of the heat sink in °C/W

$$\theta_{SA} = \theta_{JA(TOTAL)} - \theta_{JC} - \theta_{CS}$$

EQ 2-15

$$\theta_{SA} = 13.33°C/W - 3.20°C/W - 0.37°C/W$$

$$\theta_{SA} = 9.76°C/W$$

A heat sink with a thermal resistance of 9.76°C/W or better should be used. Thermal resistance of heat sinks is a function of airflow. The heat sink performance can be significantly improved with the presence of airflow.

Carefully estimating thermal resistance is important in the long-term reliability of an Actel FPGA. Design engineers should always correlate the power consumption of the device with the maximum allowable power dissipation of the package selected for that device, using the provided thermal resistance data.

Note: The values may vary depending on the application.

Table 2-18 • **A54SX08A Timing Characteristics (Worst-Case Commercial Conditions V_{CCA} = 2.25 V, V_{CCI} = 2.3 V, T_J = 70°C)**

Parameter	Description	–2 Speed		–1 Speed		Std. Speed		–F Speed		Units
		Min.	Max.	Min.	Max.	Min.	Max.	Min.	Max.	
2.5 V LVCMOS Output Module Timing[1,2]

2. *Delays based on 50 pF loading.*
3. *To obtain the slew rate, substitute the appropriate Delta value, load capacitance, and the V_{CCI} value into the following equation:*
   Slew Rate [V/ns] = $(0.1*V_{CCI} – 0.9*V_{CCI})/ (C_{load} * d_{T[LH|HL|HLS]})$
   where C_{load} is the load capacitance driven by the I/O in pF
   $d_{T[LH|HL|HLS]}$ is the worst case delta value from the datasheet in ns/pF.
4. *Delays based on 35 pF loading.*

Datasheet Information

List of Changes

The following table lists critical changes that were made in the current version of the document.

Previous Version	Changes in Current Version (v5.3)	Page
v5.2 (June 2006)	–3 speed grades have been discontinued.	N/A
	The "SX-A Timing Model" was updated with –2 data.	2-14
v5.1 February 2005	RoHS information was added to the "Ordering Information".	ii
	The "Programming" section was updated.	1-13
v5.0	Revised Table 1 and the timing data to reflect the phase out of the –3 speed grade for the A54SX08A device.	i
	The "Thermal Characteristics" section was updated.	2-11
	The "176-Pin TQFP" was updated to add pins 81 to 90.	3-11
	The "484-Pin FBGA" was updated to add pins R4 to Y26	3-26
v4.0	The "Temperature Grade Offering" is new.	1-iii
	The "Speed Grade and Temperature Grade Matrix" is new.	1-iii
	"SX-A Family Architecture" was updated.	1-1
	"Clock Resources" was updated.	1-5
	"User Security" was updated.	1-7
	"Power-Up/Down and Hot Swapping" was updated.	1-7
	"Dedicated Mode" is new	1-9
	Table 1-5 is new.	1-9
	"JTAG Instructions" is new	1-10
	"Design Considerations" was updated.	1-12
	The "Programming" section is new.	1-13
	"Design Environment" was updated.	1-13
	"Pin Description" was updated.	1-15
	Table 2-1 was updated.	2-1
	Table 2-2 was updated.	2-1
	Table 2-3 is new.	2-1
	Table 2-4 is new.	2-1
	Table 2-5 was updated.	2-2
	Table 2-6 was updated.	2-2
	"Power Dissipation" is new.	2-8
	Table 2-11 was updated.	2-9

Previous Version	Changes in Current Version (v5.3)	Page
v4.0 (continued)	Table 2-12 was updated.	2-11
	The was updated.	2-14
	The "Sample Path Calculations" were updated.	2-14
	Table 2-13 was updated.	2-17
	Table 2-13 was updated.	2-17
	All timing tables were updated.	2-18 to 2-52
v3.0	The "Actel Secure Programming Technology with FuseLock™ Prevents Reverse Engineering and Design Theft" section was updated.	1-i
	The "Ordering Information" section was updated.	1-ii
	The "Temperature Grade Offering" section was updated.	1-iii
	The Figure 1-1 • SX-A Family Interconnect Elements was updated.	1-1
	The ""Clock Resources" section"was updated	1-5
	The Table 1-1 • SX-A Clock Resources is new.	1-5
	The "User Security" section is new.	1-7
	The "I/O Modules" section was updated.	1-7
	The Table 1-2 • I/O Features was updated.	1-8
	The Table 1-3 • I/O Characteristics for All I/O Configurations is new.	1-8
	The Table 1-4 • Power-Up Time at which I/Os Become Active is new	1-8
	The Figure 1-12 • Device Selection Wizard is new.	1-9
	The "Boundary-Scan Pin Configurations and Functions" section is new.	1-9
	The Table 1-9 • Device Configuration Options for Probe Capability (TRST Pin Reserved) is new.	1-11
	The "SX-A Probe Circuit Control Pins" section was updated.	1-12
	The "Design Considerations" section was updated.	1-12
	The Figure 1-13 • Probe Setup was updated.	1-12
	The Design Environment was updated.	1-13
	The Figure 1-13 • Design Flow is new.	1-11
	The "Absolute Maximum Ratings*" section was updated.	1-12
	The "Recommended Operating Conditions" section was updated.	1-12
	The "Electrical Specifications" section was updated.	1-12
	The "2.5V LVCMOS2 Electrical Specifications" section was updated.	1-13
	The "SX-A Timing Model" and "Sample Path Calculations" equations were updated.	1-23
	The "Pin Description" section was updated.	1-15
v2.0.1	The "Design Environment" section has been updated.	1-13
	The "I/O Modules" section, and Table 1-2 • I/O Features have been updated.	1-8
	The "SX-A Timing Model" section and the "Timing Characteristics" section have new timing numbers.	1-23
