Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

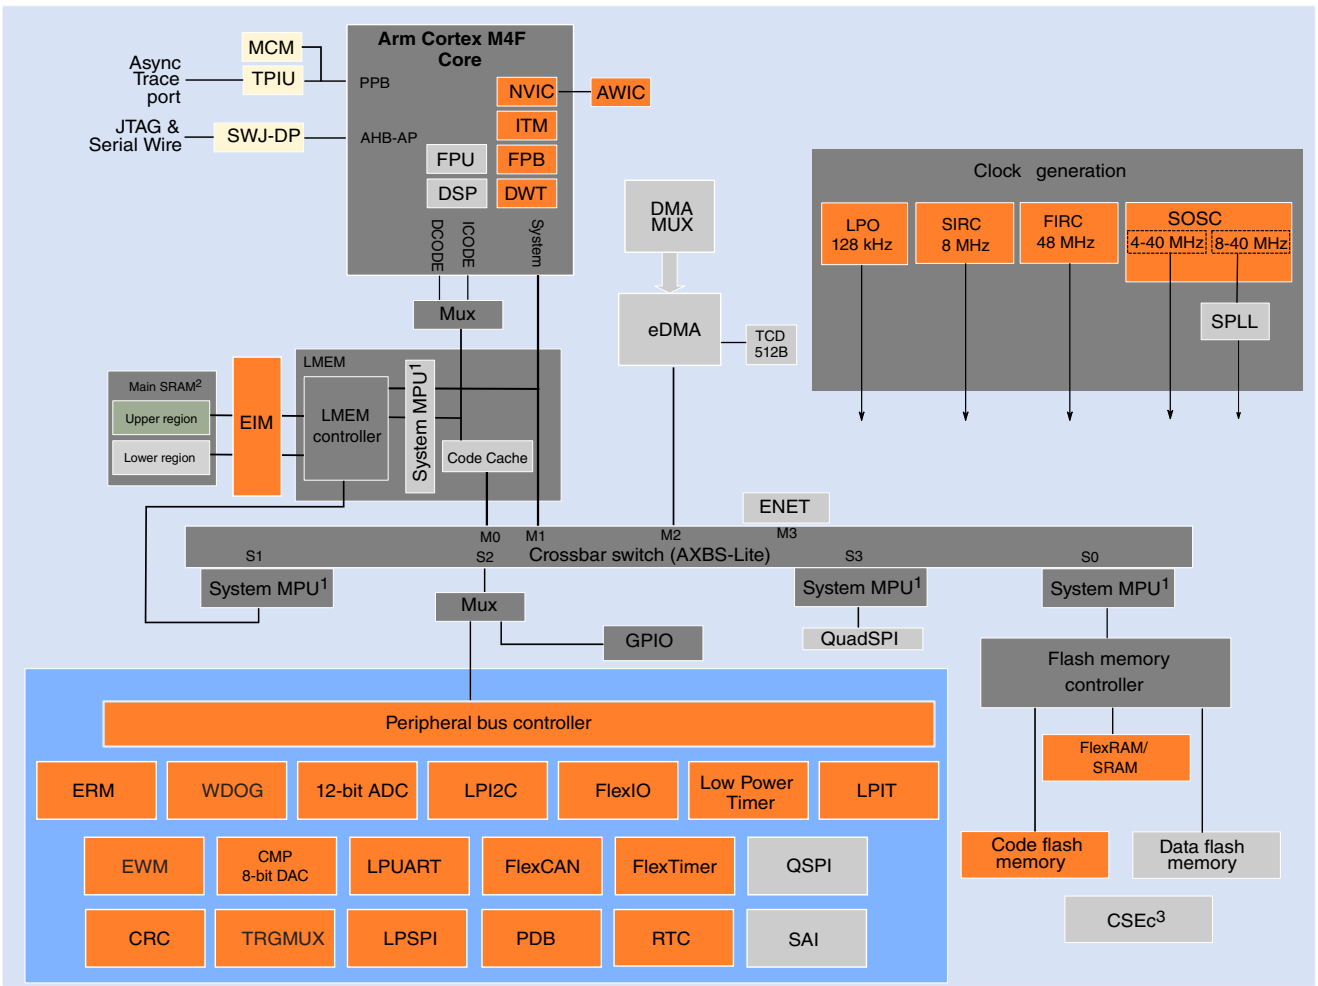
"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	ARM® Cortex®-M4F
Core Size	32-Bit Single-Core
Speed	64MHz
Connectivity	CANbus, FlexIO, I²C, LINbus, SPI, UART/USART
Peripherals	POR, PWM, WDT
Number of I/O	58
Program Memory Size	512KB (512K x 8)
Program Memory Type	FLASH
EEPROM Size	4K x 8
RAM Size	64K x 8
Voltage - Supply (Vcc/Vdd)	2.7V ~ 5.5V
Data Converters	A/D 16x12b SAR; D/A1x8b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 105°C (TA)
Mounting Type	Surface Mount
Package / Case	64-LQFP
Supplier Device Package	64-LQFP (10x10)
Purchase URL	https://www.e-xfl.com/product-detail/nxp-semiconductors/fs32k144mft0vlht

1 Block diagram

Following figures show superset high level architecture block diagrams of S32K14x series and S32K11x series respectively. Other devices within the family have a subset of the features. See Feature comparison for chip specific values.



1: On this device, NXP's system MPU implements the safety mechanisms to prevent masters from accessing restricted memory regions. This system MPU provides memory protection at the level of the Crossbar Switch. Each Crossbar master (Core, DMA, Ethernet) can be assigned different access rights to each protected memory region. The Arm M4 core version in this family does not integrate the Arm Core MPU, which would concurrently monitor only core-initiated memory accesses. In this document, the term MPU refers to NXP's system MPU.

2: For the device-specific sizes, see the "On-chip SRAM sizes" table in the "Memories and Memory Interfaces" chapter of the S32K1xx Series Reference Manual.

3: CSEc (Security) or EEPROM writes/erase will trigger error flags in HSRUN mode (112 MHz) because this use case is not allowed to execute simultaneously. The device need to switch to RUN mode (80 MHz) to execute CSEc (Security) or EEPROM writes/erase.

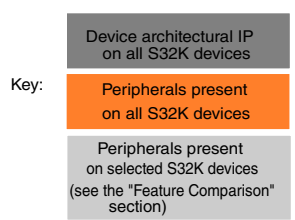


Figure 1. High-level architecture diagram for the S32K14x family

Description Input Multiplexing sheet(s) attached with Reference Manual.

		S32K11x		S32K14x			
	Parameter	K116	K118	K142	K144	K146	K148
	Core	Arm® Cortex™-M0+		Arm® Cortex™-M4F			
	Frequency	48 MHz		80 MHz (RUN mode) or 112 MHz (HSRUN mode)[1]			
System	IEEE-754 FPU	○		●

LEGEND:
- ○ Not implemented
- ● Available on the device

1 No write or erase access to Flash module, including Security (CSEc) and EEPROM commands, are allowed when device is running at HSRUN mode (112MHz) or VLPR mode.
2 Available when EEEPROM, CSEc and Data Flash are not used. Else only up to 1,984 KB is available for Program Flash.
3 4 KB (up to 512 KB D-Flash as a part of 2 MB Flash). Up to 64 KB of flash is used as EEPROM backup and the remaining 448 KB of the last 512 KB block can be used as Data flash or Program flash. See chapter FTFC for details.
4 Only for Boundary Scan Register
5 See Dimensions section for package drawings

Figure 3. S32K1xx product series comparison

3 Ordering information

3.1 Selecting orderable part number

Not all part number combinations are available. See the attachment *S32K1xx_Orderable_Part_Number_ List.xlsx* attached with the Datasheet for a list of standard orderable part numbers.

4. When input pad voltage levels are close to V_{DD} or V_{SS}, practically no current injection is possible.
5. While respecting the maximum current injection limit
6. This is the Electronic Control Unit (ECU) supply ramp rate and not directly the MCU ramp rate. Limit applies to both maximum absolute maximum ramp rate and typical operating conditions.
7. This is the MCU supply ramp rate and the ramp rate assumes that the S32K1xx HW design guidelines in AN5426 are followed. Limit applies to both maximum absolute maximum ramp rate and typical operating conditions.
8. T_J (Junction temperature)=135 °C. Assumes T_A=125 °C for RUN mode

   T_J (Junction temperature)=125 °C. Assumes TA=105 °C for HSRUN mode

   - Assumes maximum θJA for 2s2p board. See Thermal characteristics
9. 60 seconds lifetime; device in reset (no outputs enabled/toggling)

4.2 Voltage and current operating requirements

NOTE

Device functionality is guaranteed up to the LVR assert level, however electrical performance of 12-bit ADC, CMP with 8-bit DAC, IO electrical characteristics, and communication modules electrical characteristics would be degraded when voltage drops below 2.7 V

Table 2. Voltage and current operating requirements 1

Symbol	Description	Min.	Max.	Unit	Notes
V_{DD}[2]	Supply voltage	2.7[3]	5.5	V	4
V_{DD_OFF}	Voltage allowed to be developed on V_{DD} pin when it is not powered from any external power supply source.	0	0.1	V	
V_{DDA}	Analog supply voltage	2.7	5.5	V	4
$V_{DD} – V_{DDA}$	V_{DD}-to-V_{DDA} differential voltage	– 0.1	0.1	V	4
V_{REFH}	ADC reference voltage high	2.7	V_{DDA} + 0.1	V	5
V_{REFL}	ADC reference voltage low	-0.1	0.1	V	
V_{ODPU}	Open drain pullup voltage level	V_{DD}	V_{DD}	V	6
$I_{INJPAD\_DC\_OP}$[7]	Continuous DC input current (positive / negative) that can be injected into an I/O pin	-3	+3	mA	
$I_{INJSUM\_DC\_OP}$	Continuous total DC input current that can be injected across all I/O pins such that there's no degradation in accuracy of analog modules: ADC and ACMP (See section Analog Modules)	—	30	mA	

1. Typical conditions assumes V_{DD} = V_{DDA} = V_{REFH} = 5 V, temperature = 25 °C and typical silicon process unless otherwise stated.
2. As V_{DD} varies between the minimum value and the absolute maximum value the analog characteristics of the I/O and the ADC will both change. See section I/O parameters and ADC electrical specifications respectively for details.
3. S32K148 will operate from 2.7 V when executing from internal FIRC. When the PLL is engaged S32K148 is guaranteed to operate from 2.97 V. All other S32K family devices operate from 2.7 V in all modes.
4. V_{DD} and V_{DDA} must be shorted to a common source on PCB. The differential voltage between V_{DD} and V_{DDA} is for RF-AC only. Appropriate decoupling capacitors to be used to filter noise on the supplies. See application note AN5032 for reference supply design for SAR ADC.

Table 4. Supplies decoupling capacitors 1, 2

Symbol	Description	Min. 3	Typ.	Max.	Unit
C_{REF}, 4, 5	ADC reference high decoupling capacitance	70	100	—	nF
C_{DEC} 5, 6, 7	Recommended decoupling capacitance	70	100	—	nF

1. V_{DD} and V_{DDA} must be shorted to a common source on PCB. The differential voltage between V_{DD} and V_{DDA} is for RF-AC only. Appropriate decoupling capacitors to be used to filter noise on the supplies. See application note AN5032 for reference supply design for SAR ADC. All V_{SS} pins should be connected to common ground at the PCB level.
2. All decoupling capacitors must be low ESR ceramic capacitors (for example X7R type).
3. Minimum recommendation is after considering component aging and tolerance.
4. For improved performance, it is recommended to use 10 µF, 0.1 µF and 1 nF capacitors in parallel.
5. All decoupling capacitors should be placed as close as possible to the corresponding supply and ground pins.
6. Contact your local Field Applications Engineer for details on best analog routing practices.
7. The filtering used for decoupling the device supplies must comply with the following best practices rules:
   - The protection/decoupling capacitors must be on the path of the trace connected to that component.
   - No trace exceeding 1 mm from the protection to the trace or to the ground.
   - The protection/decoupling capacitors must be as close as possible to the input pin of the device (maximum 2 mm).
   - The ground of the protection is connected as short as possible to the ground plane under the integrated circuit.

1. Typical current numbers are indicative for typical silicon process and may vary based on the silicon distribution and user configuration. Typical conditions assumes $V_{DD} = V_{DDA} = V_{REFH} = 5$ V, temperature = 25 °C and typical silicon process unless otherwise stated. All output pins are floating and On-chip pulldown is enabled for all unused input pins.
2. Current numbers are for reduced configuration and may vary based on user configuration and silicon process variation.
3. HSRUN mode must not be used at 125°C. Max ambient temperature for HSRUN mode is 105°C.
4. Values mentioned for S32K14x devices are measured at RUN@80 MHz with peripherals disabled and values mentioned for S32K11x devices are measured at RUN@48 MHz with peripherals disabled.
5. With PMC_REGSC[CLKBIASDIS] set to 1. See Reference Manual for details.
6. Data collected using RAM
7. Numbers on limited samples size and data collected with Flash
8. The S32K148 data points assume that ENET/QuadSPI/SAI etc. are inactive.

Table 14. AC electrical specifications at 5 V Range (continued)

Symbol	DSE	Rise time (nS)[1]		Fall time (nS) [1]		Capacitance (pF) [2]
		Min.	Max .	Min.	Max.	
		17.3	54.8	17.6	59.7	200
	1	1.1	4.6	1.1	5.0	25
		2.0	5.7	2.0	5.8	50
		5.4	16.0	5.0	16.0	200
$tRF_{GPIO-FAST}$	0	0.42	2.2	0.37	2.2	25
		2.0	5.0	1.9	5.2	50
		9.3	18.8	8.5	19.3	200
	1	0.37	0.9	0.35	0.9	25
		1.2	2.7	1.2	2.9	50
		6.0	11.8	6.0	12.3	200

1. For reference only. Run simulations with the IBIS model and your custom board for accurate results.
2. Maximum capacitances supported on Standard IOs. However interface or protocol specific specifications might be different, for example for ENET, QSPI etc. . For protocol specific AC specifications, see respective sections.

5.7 Standard input pin capacitance

Table 15. Standard input pin capacitance

Symbol	Description	Min.	Max.	Unit
C_{IN_D}	Input capacitance: digital pins	—	7	pF

NOTE

Please refer to External System Oscillator electrical specifications for EXTAL/XTAL pins.

5.8 Device clock specifications

Table 16. Device clock specifications [1]

Symbol	Description	Min.	Max.	Unit
High Speed run mode[2]				
f_{SYS}	System and core clock	—	112	MHz
f_{BUS}	Bus clock	—	56	MHz
f_{FLASH}	Flash clock	—	28	MHz
Normal run mode (S32K11x series)				
f_{SYS}	System and core clock	—	48	MHz
f_{BUS}	Bus clock	—	48	MHz

Table continues on the next page...

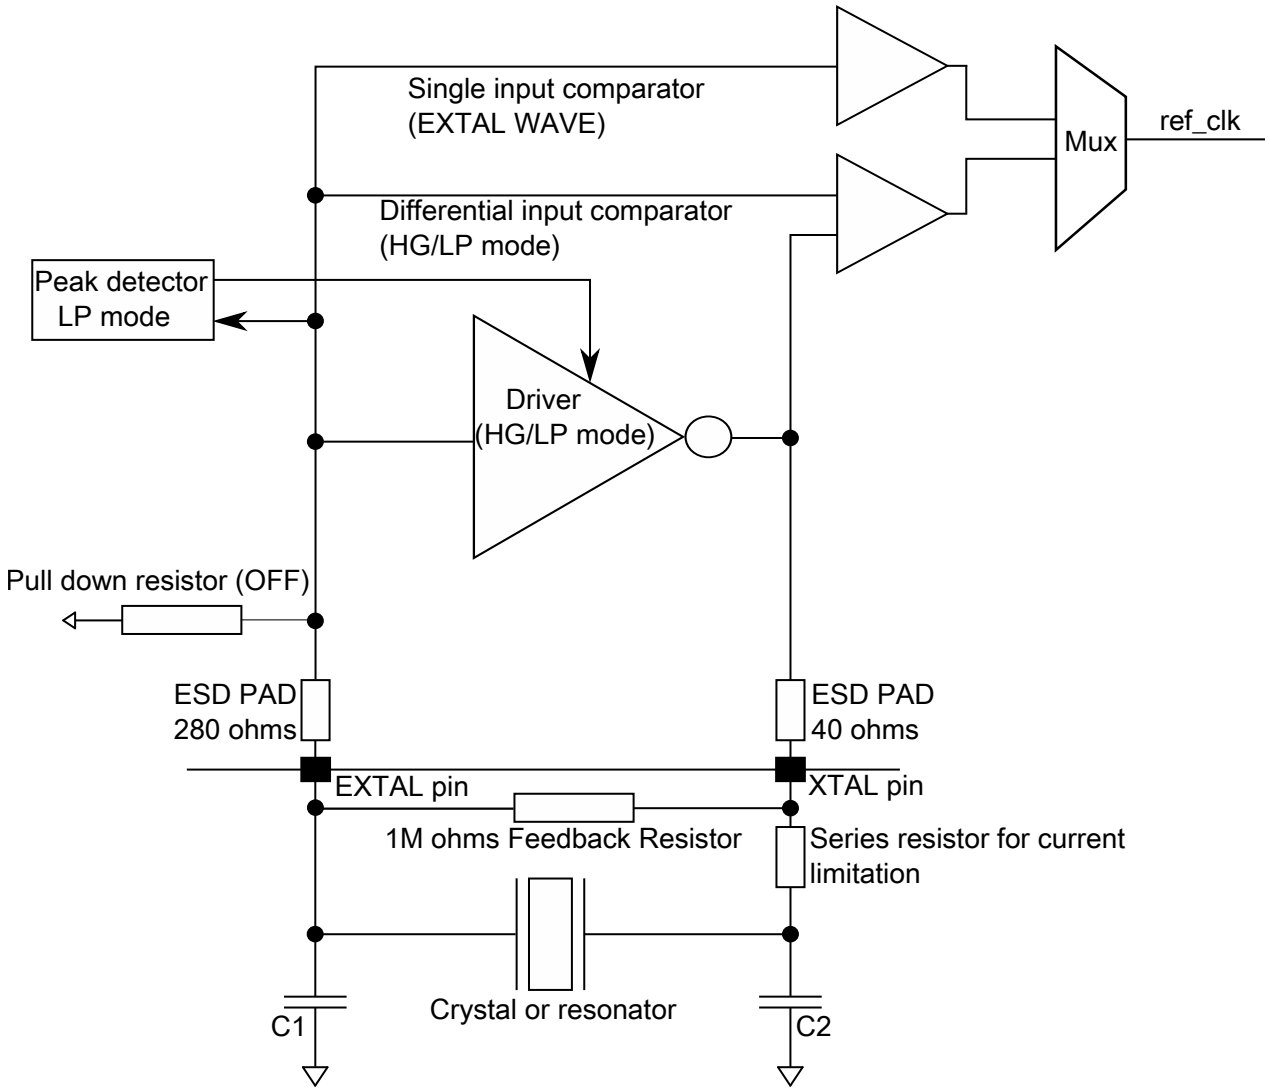

Figure 8. Oscillator connections scheme

Table 17. External System Oscillator electrical specifications

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
g_{mXOSC}	Crystal oscillator transconductance					
	SCG_SOSCCFG[RANGE]=2'b10 for 4-8 MHz	2.2	—	13.7	mA/V	
	SCG_SOSCCFG[RANGE]=2'b11 for 8-40 MHz	16	—	47	mA/V	
V_{IL}	Input low voltage — EXTAL pin in external clock mode	V_{SS}	—	1.15	V	
V_{IH}	Input high voltage — EXTAL pin in external clock mode	0.7 * V_{DD}	—	V_{DD}	V	
C_1	EXTAL load capacitance	—	—	—		1
C_2	XTAL load capacitance	—	—	—		1
R_F	Feedback resistor					2
	Low-gain mode (HGO=0)	—	—	—	MΩ	

Table continues on the next page...

Table 18. External System Oscillator frequency specifications

Symbol	Description	Min.		Typ.		Max.		Unit	Notes
		S32K14x	S32K11x	S32K14x	S32K11x	S32K14x	S32K11x		
f_{osc_hi}	Oscillator crystal or resonator frequency	4		—		40		MHz	
f_{ec_extal}	Input clock frequency (external clock mode)	—		—		50	48	MHz	1
t_{dc_extal}	Input clock duty cycle (external clock mode)	48		50		52		%	1
t_{cst}	Crystal Start-up Time								
	8 MHz low-gain mode (HGO=0)	—		1.5		—		ms	2
	8 MHz high-gain mode (HGO=1)	—		2.5		—			
	40 MHz low-gain mode (HGO=0)	—		2		—			
	40 MHz high-gain mode (HGO=1)	—		2		—			

1. Frequencies below 40 MHz can be used for degraded duty cycle upto 40-60%
2. Proper PC board layout procedures must be followed to achieve specifications.

6.3.1.1 Flash timing specifications — commands

Table 23. Flash command timing specifications for S32K14x

Table 25. NVM reliability specifications (continued)

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
When using FlexMemory feature : FlexRAM as Emulated EEPROM						
$t_{nvmretee}$	Data retention	5	—	—	years	4
$n_{nvmwree16}$	Write endurance • EEPROM backup to FlexRAM ratio = 16	100 K	—	—	writes	5, 6, 7
$n_{nvmwree256}$	• EEPROM backup to FlexRAM ratio = 256	1.6 M	—	—	writes	

1. Data retention period per block begins upon initial user factory programming or after each subsequent erase.
2. Program and Erase for PFlash and DFlash are supported across product temperature specification in Normal Mode (not supported in HSRUN mode).
3. Cycling endurance is per DFlash or PFlash Sector.
4. Data retention period per block begins upon initial user factory programming or after each subsequent erase. Background maintenance operations during normal FlexRAM usage extend effective data retention life beyond 5 years.
5. FlexMemory write endurance specified for 16-bit and/or 32-bit writes to FlexRAM and is supported across product temperature specification in Normal Mode (not supported in HSRUN mode). Greater write endurance may be achieved with larger ratios of EEPROM backup to FlexRAM.
6. For usage of any EEE driver other than the FlexMemory feature, the endurance spec will fall back to the specified endurance value of the D-Flash specification (1K).
7. FlexMemory calculator tool is available at NXP web site for help in estimation of the maximum write endurance achievable at specific EEPROM/FlexRAM ratios. The “In Spec” portions of the online calculator refer to the NVM reliability specifications section of data sheet. This calculator is only applies to the FlexMemory feature.

6.3.2 QuadSPI AC specifications

The following table describes the QuadSPI electrical characteristics.

- Measurements are with maximum output load of 25 pF, input transition of 1 ns and pad configured with fastest slew settings (DSE = 1'b1).
- I/O operating voltage ranges from 2.97 V to 3.6 V
- While doing the mode transition (RUN -> HSRUN or HSRUN -> RUN), the interface should be OFF.
- Add 50 ohm series termination on board in QuadSPI SCK for Flash A to avoid loop back reflection when using in Internal DQS (PAD Loopback) mode.
- QuadSPI trace length should be 3 inches.
- For non-Quad mode of operation if external device doesn’t have pull-up feature, external pull-up needs to be added at board level for non-used pads.
- With external pull-up, performance of the interface may degrade based on load associated with external pull-up.

6.6.2 Trace electrical specifications

The following table describes the Trace electrical characteristics.

- Measurements are with maximum output load of 50 pF, input transition of 1 ns and pad configured with fastest slew settings (DSE = 1'b1).
- While doing the mode transition (RUN -> HSRUN or HSRUN -> RUN), the interface should be OFF.

Table 39. Trace specifications

	Symbol	Description	RUN Mode			HSRUN Mode		VLPR Mode	Unit
—	Fsys	System frequency	80	48	40	112	80	4	MHz

Table 41. Thermal characteristics for 32-pin QFN and 48/64/100/144/176-pin LQFP package (continued)

Rating	Conditions	Symbol	Package	Values						Unit
				S32K116	S32K118	S32K142	S32K144	S32K146	S32K148	
Thermal resistance, Junction to Package Top[7]	Natural Convection	Ψ_{JT}	32	1	NA	NA	NA	NA	NA	
			48	4	2	NA	NA	NA	NA	
			64	NA	2	2	2	2	NA	
			100	NA	NA	2	2	2	NA	
			144	NA	NA	NA	NA	2	1	
			176	NA	NA	NA	NA	NA	1	

1. Junction temperature is a function of die size, on-chip power dissipation, package thermal resistance, mounting site (board) temperature, ambient temperature, air flow, power dissipation of other components on the board, and board thermal resistance.
2. Per JEDEC JESD51-2 with natural convection for horizontally oriented board. Board meets JESD51-9 specification for 1s or 2s2p board, respectively.
3. Per JEDEC JESD51-6 with forced convection for horizontally oriented board. Board meets JESD51-9 specification for 1s or 2s2p board, respectively.
4. Thermal resistance between the die and the printed circuit board per JEDEC JESD51-8. Board temperature is measured on the top surface of the board near the package.
5. Thermal resistance between the die and the case top surface as measured by the cold plate method (MIL SPEC-883 Method 1012.1).
6. Thermal resistance between the die and the solder pad on the bottom of the package. Interface resistance is ignored.
7. Thermal characterization parameter indicating the temperature difference between package top and the junction temperature per JEDEC JESD51-2. When Greek letters are not available, the thermal characterization parameter is written as Psi-JT.

7.3 General notes for specifications at maximum junction temperature

An estimation of the chip junction temperature, T_J, can be obtained from this equation:

$$T_J = T_A + (R_{\theta JA} \times P_D)$$

where:

- T_A = ambient temperature for the package (°C)
- $R_{\theta JA}$ = junction to ambient thermal resistance (°C/W)
- P_D = power dissipation in the package (W)

The junction to ambient thermal resistance is an industry standard value that provides a quick and easy estimation of thermal performance. Unfortunately, there are two values in common usage: the value determined on a single layer board and the value obtained on a board with two planes. For packages such as the PBGA, these values can be different by a factor of two. Which value is closer to the application depends on the power dissipated by other components on the board. The value obtained on a single layer board is appropriate for the tightly packed printed circuit board. The value obtained on the board with the internal planes is usually appropriate if the board has low power dissipation and the components are well separated.

When a heat sink is used, the thermal resistance is expressed in the following equation as the sum of a junction-to-case thermal resistance and a case-to-ambient thermal resistance:

$$R_{\theta JA} = R_{\theta JC} + R_{\theta CA}$$

where:

- $R_{\theta JA}$ = junction to ambient thermal resistance (°C/W)
- $R_{\theta JC}$ = junction to case thermal resistance (°C/W)
- $R_{\theta CA}$ = case to ambient thermal resistance (°C/W)

$R_{\theta JC}$ is device related and cannot be influenced by the user. The user controls the thermal environment to change the case to ambient thermal resistance, $R_{\theta CA}$. For instance, the user can change the size of the heat sink, the air flow around the device, the interface material, the mounting arrangement on printed circuit board, or change the thermal dissipation on the printed circuit board surrounding the device.

To determine the junction temperature of the device in the application when heat sinks are not used, the Thermal Characterization Parameter (Ψ_{JT}) can be used to determine the junction temperature with a measurement of the temperature at the top center of the package case using this equation:

$$T_J = T_T + (\Psi_{JT} \times P_D)$$

where:

- T_T = thermocouple temperature on top of the package (°C)
- Ψ_{JT} = thermal characterization parameter (°C/W)
- P_D = power dissipation in the package (W)

The thermal characterization parameter is measured per JESD51-2 specification using a 40 gauge type T thermocouple epoxied to the top center of the package case. The thermocouple should be positioned so that the thermocouple junction rests on the package. A small amount of epoxy is placed over the thermocouple junction and over about 1 mm of wire extending from the junction. The thermocouple wire is placed flat against the package case to avoid measurement errors caused by cooling effects of the thermocouple wire.

8 Dimensions

8.1 Obtaining package dimensions

Package dimensions are provided in the package drawings.

To find a package drawing, go to http://www.nxp.com and perform a keyword search for the drawing's document number:

Package option	Document Number
32-pin QFN	SOT617-3 [1]
48-pin LQFP	98ASH00962A
64-pin LQFP	98ASS23234W
100-pin LQFP	98ASS23308W
100-pin MAPBGA	98ASA00802D
144-pin LQFP	98ASS23177W
176-pin LQFP	98ASS23479W

1. 5x5 mm package

Table 43. Revision History (continued)

Rev. No.	Date	Substantial Changes
		• Updated values for V_{REFH} and V_{REFL} to add refernce to the section "voltage and current operating requirments" for Min and Max valaues • Updated footnote to Typ. • Removed footnote from RAS Analog source resistance • Updated figure: ADC input impedance equivalency diagram • In table: 12-bit ADC characteristics (2.7 V to 3 V) (V_{REFH} = V_{DDA}, V_{REFL} = V_{SS}) • Removed rows for V_{TEMP_S} and V_{TEMP25} • Updated footnote to Typ. • In table: 12-bit ADC characteristics (3 V to 5.5 V)(V_{REFH} = V_{DDA}, V_{REFL} = V_{SS}) • Removed rows for V_{TEMP_S} and V_{TEMP25} • Removed number for TUE • Updated footnote to Typ. • In table: Comparator with 8-bit DAC electrical specifications • Updated Typ. of I_{DDLS} Supply current, Low-speed mode • Updated Typ. of t_{DLSB} Propagation delay, Low-speed mode • Updated Typ. of t_{DHSS} Propagation delay, High-speed mode • Updated t_{DLSS} Propagation delay • Added row for t_{DDAC} Initialization and switching settling time • Updated footnote • Updated section LPSPI electrical specifications • Added section: SAI electrical specifications • Updated section: Ethernet AC specifications • Added section: Clockout frequency • Added section: Trace electrical specifications • Updated table: Table 41 : Updated numbers for S32K142 and S32K148 • Updated table: Table 42 : Updated numbers for S32K148 • Updated Document number for 32-pin QFN in topic Obtaining package dimensions
3	14 March 2017	• In Table 2 • Updated min. value of V_{DD_OFF} • Added parameter I_{INJSUM_AF} • Updated Power mode transition operating behaviors • Updated Power consumption • Updated footnote to T_{SPLL_LOCK} in SPLL electrical specifications • In 12-bit ADC electrical characteristics • Updated table: 12-bit ADC characteristics (2.7 V to 3 V) (VREFH = VDDA, VREFL = VSS) • Added typ. value to I_{DDA_ADC}, TUE, DNL, and INL • Added min. value to SMPLTS • Removed footnote 'All the parameters in this table ... ' • Updated table: 12-bit ADC characteristics (3 V to 5.5 V) (VREFH = VDDA, VREFL = VSS) • Added typ. value to I_{DDA_ADC} • Removed footnote 'All the parameters in this table ... ' • In Flash timing specifications — commands updated Max. value of t_{vfykey} to 33 µs
4	02 June 2017	• In section: Block diagram, added block diagram for S32K11x series. • Updated figure: S32K1xx product series comparison. • In section: Selecting orderable part number , added reference to attachement *S32K_Part_Numbers.xlsx*. • In section: Ordering information • Updated figure: Ordering information. • In Table 1,

Table continues on the next page...

Table 43. Revision History (continued)

Rev. No.	Date	Substantial Changes
		• Updated 3.3 V numbers and added footnote against f_{op}, t_{SU}, ans t_V in HSRUN Mode • Added footnote to 't_{WSPSCK}' • Updated Thermal characteristics for S32K11x
6	31 Jan 2018	• Changed the representation of ARM trademark throughout. • Removed S32K142 from 'Caution' • In 'Key features', added the following note under 'Power management', 'Memory and memory interfaces', and 'Reliability, safety and security': • No write or erase access to ... • In High-level architecture diagram for the S32K14x family, added the following footnote: • No write or erase access to ... • In High-level architecture diagram for the S32K11x family : • Minor editorial update: Fixed the placement of SRAM, under 'Flash memory controller' block • Updated figure: S32K1xx product series comparison : • Updated footnote 1, and added against 'HSRUN' in addition to 'HW security module (CSEc)' and 'EEPROM emulated by FlexRAM'. • Updated 'System RAM (including FlexRAM and MTB)' row for S32K144, S32K146, and S32K148. • Updated channel count for S32K116 in row '12-bit SAR ADC (1 MSPS each)'. • Updated Ordering information • Updated Flash timing specifications — commands for S32K148, S32K142, S32K146, S32K116, and S32K118.
7	19 April 2018	• Changed Caution to Notes • Updated the wordings of Notes and removed S32K146 • Added 'Following two are the available ...' • In 'Key features' : • Editorial updates • Updated the note under Power management, Memory and memory interfaces, and Safety and security. • Updated FlexIO under Communications interfaces • Added ENET and SAI under Communications interfaces • Updated Cryptographic Services Engine (CSEc) under 'Safety and security' • In High-level architecture diagram for the S32K14x family : • Minor editorial updates • Updated note 3 • In High-level architecture diagram for the S32K11x family : • Minor editorial updates • In figure: S32K1xx product series comparison : • Editorial updates • Updated Frequency for S32K14x • Updated footnote 4 • Added footnote 5 • In Ordering information : • Renamed section, updated the starting paragraph • Updated the figure • In Voltage and current operating requirements, updated the note • In Power consumption : • Updated specs for S32K146 • Removed section 'Modes configuration', amd moved its content under the fisrt paragraph. • In 12-bit ADC operating conditions :
