
Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Not For New Designs
Core Processor	STM8A
Core Size	8-Bit
Speed	16MHz
Connectivity	I²C, LINbus, SPI, UART/USART
Peripherals	Brown-out Detect/Reset, POR, PWM, WDT
Number of I/O	25
Program Memory Size	32KB (32K x 8)
Program Memory Type	FLASH
EEPROM Size	1K x 8
RAM Size	2K x 8
Voltage - Supply (Vcc/Vdd)	3V ~ 5.5V
Data Converters	A/D 7x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 150°C (TA)
Mounting Type	Surface Mount
Package / Case	32-LQFP
Supplier Device Package	-
Purchase URL	https://www.e-xfl.com/product-detail/stmicroelectronics/stm8af6266tdx

1 Introduction

This datasheet refers to the STM8AF6246, STM8AF6248, STM8AF6266 and STM8AF6268 products with 16 to 32 Kbyte of Flash program memory.

In the order code, the letter ‘F’ refers to product versions with data EEPROM and ‘H’ refers to product versions without data EEPROM. The identifiers ‘F’ and ‘H’ do not coexist in a given order code.

The datasheet contains the description of family features, pinout, electrical characteristics, mechanical data and ordering information.

- For complete information on the STM8A microcontroller memory, registers and peripherals, please refer to STM8S series and STM8AF series 8-bit microcontrollers reference manual (RM0016).
- For information on programming, erasing and protection of the internal Flash memory please refer to the STM8 Flash programming manual (PM0051).
- For information on the debug and SWIM (single wire interface module) refer to the STM8 SWIM communication protocol and debug module user manual (UM0470).
- For information on the STM8 core, please refer to the STM8 CPU programming manual (PM0044).

1. Legend:
   ADC: Analog-to-digital converter
   beCAN: Controller area network
   BOR: Brownout reset
   I²C: Inter-integrated circuit multimaster interface
   IWDG: Independent window watchdog
   LINUART: Local interconnect network universal asynchronous receiver transmitter
   POR: Power on reset
   SPI: Serial peripheral interface
   SWIM: Single wire interface module
   USART: Universal synchronous asynchronous receiver transmitter
   Window WDG: Window watchdog

5.8 Analog-to-digital converter (ADC)

The STM8A products described in this datasheet contain a 10-bit successive approximation ADC with up to 16 multiplexed input channels, depending on the package.

The ADC name differs between the datasheet and STM8S series and STM8AF series 8-bit microcontrollers reference manual (see *Table 5*).

Table 5. ADC naming

Peripheral name in datasheet	Peripheral name in reference manual (RM0016)
ADC	ADC1

ADC features

- 10-bit resolution
- Single and continuous conversion modes
- Programmable prescaler: f_{MASTER} divided by 2 to 18
- Conversion trigger on timer events and external events
- Interrupt generation at end of conversion
- Selectable alignment of 10-bit data in 2 x 8 bit result register
- Shadow registers for data consistency
- ADC input range: $V_{SSA} \leq V_{IN} \leq V_{DDA}$
- Analog watchdog
- Schmitt-trigger on analog inputs can be disabled to reduce power consumption
- Scan mode (single and continuous)
- Dedicated result register for each conversion channel
- Buffer mode for continuous conversion

Note: An additional AIN12 analog input is not selectable in ADC scan mode or with analog watchdog. Values converted from AIN12 are stored only into the ADC_DRH/ADC_DRL registers.

5.9 Communication interfaces

The following sections give a brief overview of the communication peripheral. Some peripheral names differ between the datasheet and STM8S series and STM8AF series 8-bit microcontrollers reference manual (see *Table 6*).

Table 6. Communication peripheral naming correspondence

Peripheral name in datasheet	Peripheral name in reference manual (RM0016)
LINUART	UART2

UART mode

- Full duplex, asynchronous communications - NRZ standard format (mark/space)
- High-precision baud rate generator
  - A common programmable transmit and receive baud rates up to $f_{MASTER}/16$
- Programmable data word length (8 or 9 bits) – 1 or 2 stop bits – parity control
- Separate enable bits for transmitter and receiver
- Error detection flags
- Reduced power consumption mode
- Multi-processor communication - enter mute mode if address match does not occur
- Wakeup from mute mode (by idle line detection or address mark detection)
- Two receiver wakeup modes:
  - Address bit (MSB)
  - Idle line

5.10 Input/output specifications

The product features four different I/O types:

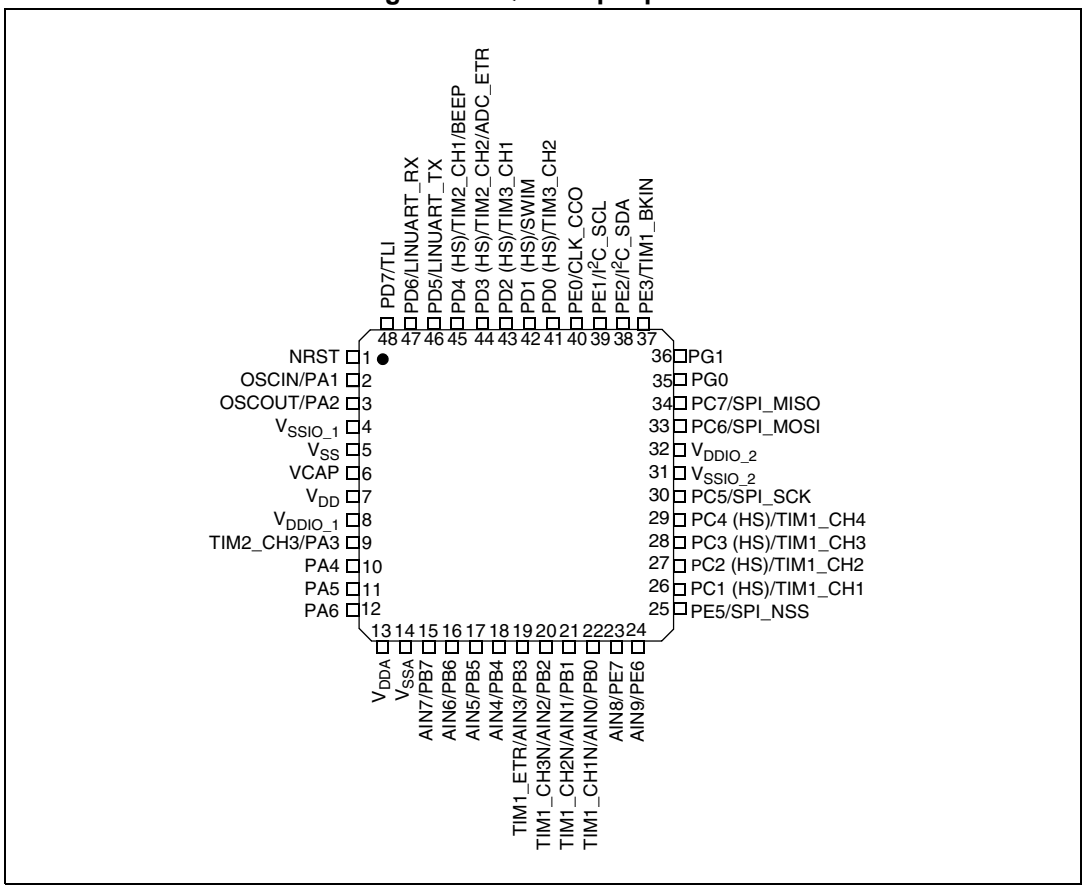
- Standard I/O 2 MHz
- Fast I/O up to 10 MHz
- High sink 8 mA, 2 MHz
- True open drain (I^2C interface)

To decrease EMI (electromagnetic interference), high sink I/Os have a limited maximum slew rate. The rise and fall times are similar to those of standard I/Os.

The analog inputs are equipped with a low leakage analog switch. Additionally, the schmitt-trigger input stage on the analog I/Os can be disabled in order to reduce the device standby consumption.

STM8A I/Os are designed to withstand current injection. For a negative injection current of 4 mA, the resulting leakage current in the adjacent input does not exceed 1 µA. Thanks to this feature, external protection diodes against current injection are no longer required.

Figure 4. LQFP 48-pin pinout



2. (HS) high sink capability.

Table 7. Legend/abbreviation

Type	I= input, O = output, S = power supply	
Level	Input	CM = CMOS (standard for all I/Os)
	Output	HS = High sink (8 mA)
Output speed	O1 = Standard (up to 2 MHz) O2 = Fast (up to 10 MHz) O3 = Fast/slow programmability with slow as default state after reset O4 = Fast/slow programmability with fast as default state after reset	
Port and control configuration	Input	float = floating, wpu = weak pull-up
	Output	T = true open drain, OD = open drain, PP = push pull
Reset state	Bold X (pin state after reset release). Unless otherwise specified, the pin state is the same during the reset phase (i.e. “under reset”) and after internal reset release (i.e. at reset state).	

Table 8. STM8AF6246/48/66/68 (32 Kbyte) microcontroller pin description(1)(2) (continued)

Pin number		Pin name	Type	Input			Output				Main function (after reset)	Default alternate function	Alternate function after remap [option bit]
LQFP48	VFQFPN/LQFP32			floating	wpu	Ext. interrupt	High sink	Speed	OD	PP			
47	31	PD6/ LINUART_RX	I/O	**X**	X	X	-	O1	X	X	**Port D6**	LINUART data receive	-
48	32	PD7/TLI(8)	I/O	**X**	X	X	-	O1	X	X	**Port D7**	Top level interrupt	-

1. Refer to *Table 7* for the definition of the abbreviations.
2. Reset state is shown in bold.
3. In Halt/Active-halt mode this pad behaves in the following way:
   - the input/output path is disabled
   - if the HSE clock is used for wakeup, the internal weak pull up is disabled
   - if the HSE clock is off, internal weak pull up setting from corresponding OR bit is used
   By managing the OR bit correctly, it must be ensured that the pad is not left floating during Halt/Active-halt.
4. On this pin, a pull-up resistor as specified in *Table 35*. I/O static characteristics is enabled during the reset phase of the product.
5. AIN12 is not selectable in ADC scan mode or with analog watchdog.
6. In the open-drain output column, 'T' defines a true open-drain I/O (P-buffer, week pull-up, and protection diode to V_{DD} are not implemented)
7. The PD1 pin is in input pull-up during the reset phase and after reset release.
8. If this pin is configured as interrupt pin, it will trigger the TLI.

6.2 Alternate function remapping

As shown in the rightmost column of *Table 8*, some alternate functions can be remapped at different I/O ports by programming one of eight AFR (alternate function remap) option bits. Refer to *Section 9: Option bytes on page 44*. When the remapping option is active, the default alternate function is no longer available.

To use an alternate function, the corresponding peripheral must be enabled in the peripheral registers.

Alternate function remapping does not effect GPIO capabilities of the I/O ports (see the GPIO section of STM8S series and STM8AF series 8-bit microcontrollers reference manual, RM0016).

Table 9. Memory model for the devices covered in this datasheet

Flash program memory size	Flash program memory end address	RAM size	RAM end address	Stack roll-over address
32K	0x00 0FFFF	2K	0x00 07FF	0x00 0600
16K	0x00 0BFFF			

7.2 Register map

In this section the memory and register map of the devices covered by this datasheet is described. For a detailed description of the functionality of the registers, refer to STM8S series and STM8AF series 8-bit microcontrollers reference manual, RM0016.

Table 10. I/O port hardware register map

Address	Block	Register label	Register name	Reset status
0x00 5000	Port A	PA_ODR	Port A data output latch register	0x00
0x00 5001		PA_IDR	Port A input pin value register	0xXX(1)
0x00 5002		PA_DDR	Port A data direction register	0x00
0x00 5003		PA_CR1	Port A control register 1	0x00
0x00 5004		PA_CR2	Port A control register 2	0x00
0x00 5005	Port B	PB_ODR	Port B data output latch register	0x00
0x00 5006		PB_IDR	Port B input pin value register	0xXX(1)
0x00 5007		PB_DDR	Port B data direction register	0x00
0x00 5008		PB_CR1	Port B control register 1	0x00
0x00 5009		PB_CR2	Port B control register 2	0x00
0x00 500A	Port C	PC_ODR	Port C data output latch register	0x00
0x00 500B		PB_IDR	Port C input pin value register	0xXX(1)

10.3.3 External clock sources and timing characteristics

HSE user external clock

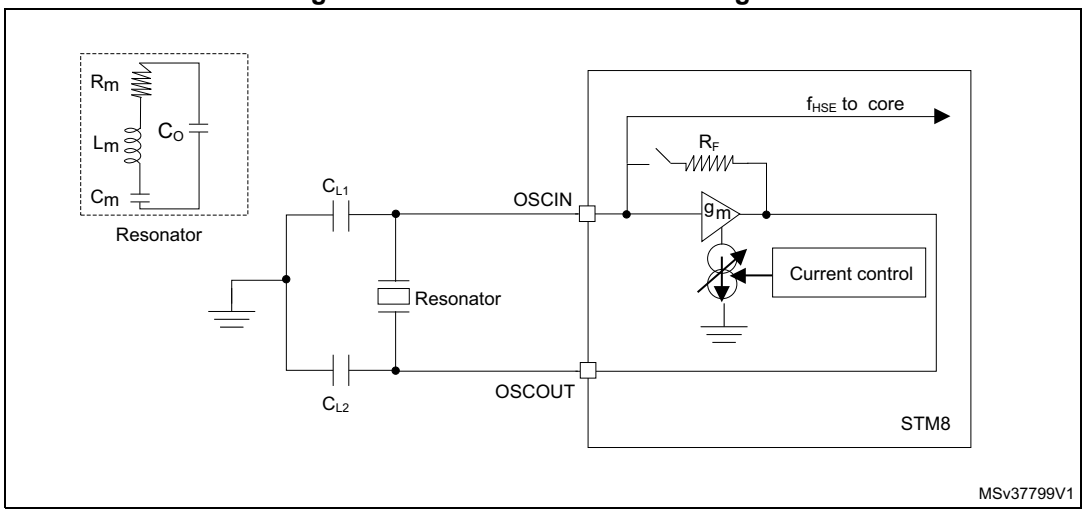
Subject to general operating conditions for V_{DD} and T_A.

Table 28. HSE user external clock characteristics

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
f_{HSE_ext}	User external clock source frequency	T_A is -40 to 150 °C	0(1)	-	16	MHz
V_{HSEdHL}	Comparator hysteresis	-	0.1 x V_{DD}	-	-	V
V_{HSEH}	OSCIN input pin high level voltage	-	0.7 x V_{DD}	-	V_{DD}	
V_{HSEL}	OSCIN input pin low level voltage	-	V_{SS}	-	0.3 x V_{DD}	
I_{LEAK_HSE}	OSCIN input leakage current	$V_{SS} < V_{IN} < V_{DD}$	-1	-	+1	µA

1. In CSS is used, the external clock must have a frequency above 500 kHz.

Figure 17. HSE oscillator circuit diagram



HSE oscillator critical g_m formula

The crystal characteristics have to be checked with the following formula:

$$g_m \gg g_{mcrit}$$

where g_{mcrit} can be calculated with the crystal parameters as follows:

$$g_{mcrit} = (2 \times \Pi \times {}^{f}HSE)^2 \times R_m(2Co + C)^2$$

R_m: Notional resistance (see crystal specification)
L_m: Notional inductance (see crystal specification)
C_m: Notional capacitance (see crystal specification)
Co: Shunt capacitance (see crystal specification)
$C_{L1} = C_{L2} = C$: Grounded external capacitance

10.3.4 Internal clock sources and timing characteristics

Subject to general operating conditions for V_{DD} and T_A.

High speed internal RC oscillator (HSI)

Table 30. HSI oscillator characteristics

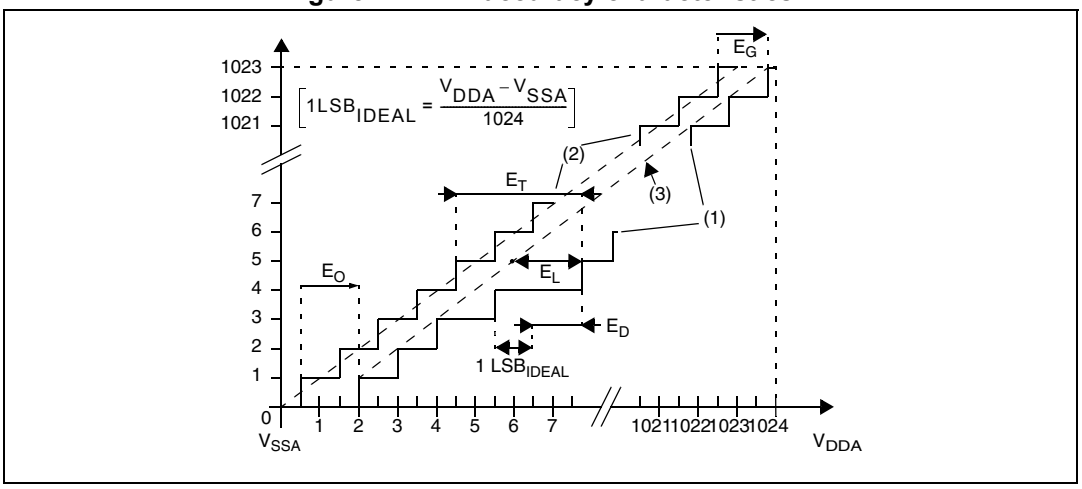
Symbol	Parameter	Conditions	Min	Typ	Max	Unit
f_{HSI}	Frequency	-	-	16	-	MHz

Table 41. ADC accuracy for V_{DDA} = 5 V

Symbol	Parameter	Conditions	Typ	Max(1)	Unit
$\|E_T\|$	Total unadjusted error(2)	f_{ADC} = 2 MHz	1.4	3(3)	LSB
$\|E_O\|$	Offset error(2)		0.8	3	
$\|E_G\|$	Gain error(2)		0.1	2	
$\|E_D\|$	Differential linearity error(2)		0.9	1	
$\|E_L\|$	Integral linearity error(2)		0.7	1.5	
$\|E_T\|$	Total unadjusted error(2)	f_{ADC} = 4 MHz	1.9(4)	4(4)	
$\|E_O\|$	Offset error(2)		1.3(4)	4(4)	
$\|E_G\|$	Gain error(2)		0.6(4)	3(4)	
$\|E_D\|$	Differential linearity error(2)		1.5(4)	2(4)	
$\|E_L\|$	Integral linearity error(2)		1.2(4)	1.5(4)	

1. Max value is based on characterization, not tested in production.
2. ADC accuracy vs. injection current: Any positive or negative injection current within the limits specified for $I_{INJ(PIN)}$ and $\Sigma I_{INJ(PIN)}$ in *Section 10.3.6* does not affect the ADC accuracy.
3. TUE 2LSB can be reached on specific sales types on the whole temperature range.
4. Target values.

Figure 41. ADC accuracy characteristics



1. Example of an actual transfer curve
2. The ideal transfer curve
3. End point correlation line
   E_T = Total unadjusted error: Maximum deviation between the actual and the ideal transfer curves.
   E_O = Offset error: Deviation between the first actual transition and the first ideal one.
   E_G = Gain error: Deviation between the last ideal transition and the last actual one.
   E_D = Differential linearity error: Maximum deviation between actual steps and the ideal one.
   E_L = Integral linearity error: Maximum deviation between any actual transition and the end point correlation line.

Electromagnetic interference (EMI)

Emission tests conform to the IEC 61967-2 standard for test software, board layout and pin loading.

Table 43. EMI data

Symbol	Parameter	Conditions				Unit
		General conditions	Monitored frequency band	Max f_{CPU}(1)		
				8 MHz	16 MHz	
S_{EMI}	Peak level	V_{DD} = 5 V, T_A = 25 °C, LQFP80 package conforming to IEC 61967-2	0.1 MHz to 30 MHz	15	17	dBµV
			30 MHz to 130 MHz	18	22	
			130 MHz to 1 GHz	-1	3	
	EMI level		-	2	2.5	

1. Data based on characterization results, not tested in production.

Absolute maximum ratings (electrical sensitivity)

Based on two different tests (ESD and LU) using specific measurement methods, the product is stressed to determine its performance in terms of electrical sensitivity. For more details, refer to the application note AN1181.

Electrostatic discharge (ESD)

Electrostatic discharges (3 positive then 3 negative pulses separated by 1 second) are applied to the pins of each sample according to each pin combination. The sample size depends on the number of supply pins in the device (3 parts*(n+1) supply pin). This test conforms to the JESD22-A114A/A115A standard. For more details, refer to the application note AN1181.

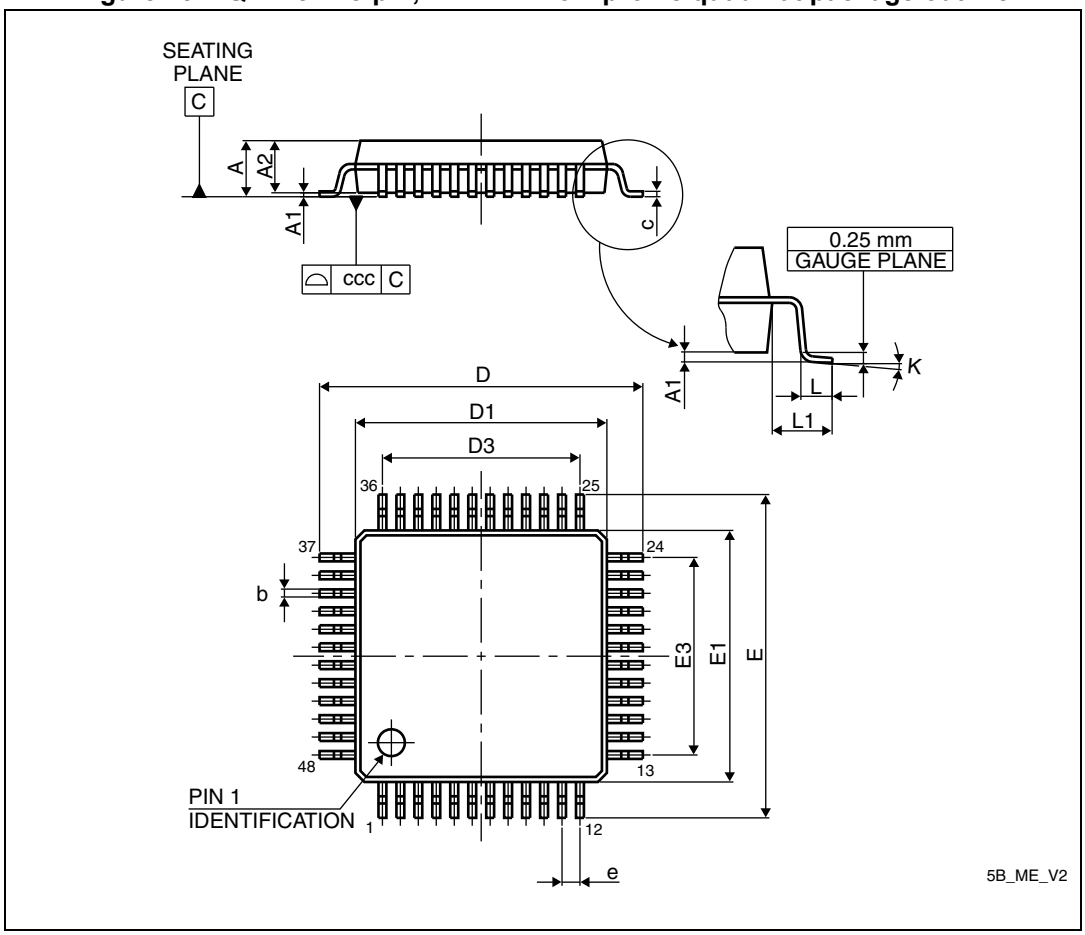
Table 44. ESD absolute maximum ratings

Symbol	Ratings	Conditions	Class	Maximum value(1)	Unit
$V_{ESD(HBM)}$	Electrostatic discharge voltage (Human body model)	T_A = 25°C, conforming to JESD22-A114	3A	4000	V
$V_{ESD(CDM)}$	Electrostatic discharge voltage (Charge device model)	T_A= 25°C, conforming to JESD22-C101	3	500	
$V_{ESD(MM)}$	Electrostatic discharge voltage (Machine model)	T_A= 25°C, conforming to JESD22-A115	B	200	

1. Data based on characterization results, not tested in production

11.2 LQFP48 package information

Figure 45. LQFP48 - 48-pin, 7 x 7 mm low-profile quad flat package outline



1. Drawing is not to scale.

13 STM8 development tools

Development tools for the STM8A microcontrollers include the

- STice emulation system offering tracing and code profiling
- STVD high-level language debugger including assembler and visual development environment - seamless integration of third party C compilers.
- STVP Flash programming software

In addition, the STM8A comes with starter kits, evaluation boards and low-cost in-circuit debugging/programming tools.

13.1 Emulation and in-circuit debugging tools

The STM8 tool line includes the STice emulation system offering a complete range of emulation and in-circuit debugging features on a platform that is designed for versatility and cost-effectiveness. In addition, STM8A application development is supported by a low-cost in-circuit debugger/programmer.

The STice is the fourth generation of full-featured emulators from STMicroelectronics. It offers new advanced debugging capabilities including tracing, profiling and code coverage analysis to help detect execution bottlenecks and dead code.

In addition, STice offers in-circuit debugging and programming of STM8A microcontrollers via the STM8 single wire interface module (SWIM), which allows non-intrusive debugging of an application while it runs on the target microcontroller.

For improved cost effectiveness, STice is based on a modular design that allows users to order exactly what they need to meet their development requirements and to adapt their emulation system to support existing and future ST microcontrollers.

13.1.1 STice key features

- Program and data trace recording up to 128 K records
- Advanced breakpoints with up to 4 levels of conditions
- Data breakpoints
- Real-time read/write of all device resources during emulation
- Occurrence and time profiling and code coverage analysis (new features)
- In-circuit debugging/programming via SWIM protocol
- 8-bit probe analyzer
- 1 input and 2 output triggers
- USB 2.0 high speed interface to host PC
- Power supply follower managing application voltages between 1.62 to 5.5 V
- Modularity that allows users to specify the components they need to meet their development requirements and adapt to future requirements.
- Supported by free software tools that include integrated development environment (IDE), programming software interface and assembler for STM8.

13.2 Software tools

STM8 development tools are supported by a complete, free software package from STMicroelectronics that includes ST visual develop (STVD) IDE and the ST visual programmer (STVP) software interface. STVD provides seamless integration of the Cosmic and Raisonance C compilers for STM8.

13.2.1 STM8 toolset

The STM8 toolset with STVD integrated development environment and STVP programming software is available for free download at www.st.com. This package includes:

ST visual develop

Full-featured integrated development environment from STMicroelectronics, featuring:

- Seamless integration of C and ASM toolsets
- Full-featured debugger
- Project management
- Syntax highlighting editor
- Integrated programming interface
- Support of advanced emulation features for STice such as code profiling and coverage

ST visual programmer (STVP)

Easy-to-use, unlimited graphical interface allowing read, write and verification of the STM8A microcontroller Flash memory. STVP also offers project mode for saving programming configurations and automating programming sequences.

13.2.2 C and assembly toolchains

Control of C and assembly toolchains is seamlessly integrated into the STVD integrated development environment, making it possible to configure and control the building of the application directly from an easy-to-use graphical interface.

Available toolchains include:

C compiler for STM8

All compilers are available in free version with a limited code size depending on the compiler. For more information, refer to www.cosmic-software.com, www.raisonance.com, and www.iar.com.

STM8 assembler linker

Free assembly toolchain included in the STM8 toolset, which allows users to assemble and link the application source code.
