

Welcome to [E-XFL.COM](http://E-XFL.COM)

### What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "[Embedded - Microcontrollers](#)"

#### Details

Product Status	Active
Core Processor	PIC
Core Size	16-Bit
Speed	40 MIPS
Connectivity	I <sup>2</sup> C, IrDA, LINbus, SPI, UART/USART
Peripherals	Brown-out Detect/Reset, DMA, POR, PWM, WDT
Number of I/O	85
Program Memory Size	256KB (85.5K x 24)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	16K x 8
Voltage - Supply (Vcc/Vdd)	3V ~ 3.6V
Data Converters	A/D 32x10b, 32x12b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	100-TQFP
Supplier Device Package	100-TQFP (12x12)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/microchip-technology/pic24hj256gp210-i-pt">https://www.e-xfl.com/product-detail/microchip-technology/pic24hj256gp210-i-pt</a>

# MICROCHIP PIC24HJXXXGPX06/X08/X10

## High-Performance, 16-Bit Microcontrollers

### Operating Range:

- Up to 40 MIPS operation (at 3.0-3.6V):
  - Industrial temperature range (-40°C to +85°C)

### High-Performance CPU:

- Modified Harvard architecture
- C compiler optimized instruction set
- 16-bit wide data path
- 24-bit wide instructions
- Linear program memory addressing up to 4M instruction words
- Linear data memory addressing up to 64 Kbytes
- 71 base instructions: mostly 1 word/1 cycle
- Sixteen 16-bit General Purpose Registers
- Flexible and powerful Indirect Addressing modes
- Software stack
- 16 x 16 multiply operations
- 32/16 and 16/16 divide operations
- Up to  $\pm 16$ -bit data shifts

### Direct Memory Access (DMA):

- 8-channel hardware DMA
- 2 Kbytes dual ported DMA buffer area (DMA RAM) to store data transferred via DMA:
  - Allows data transfer between RAM and a peripheral while CPU is executing code (no cycle stealing)
- Most peripherals support DMA

### Interrupt Controller:

- 5-cycle latency
- Up to 61 available interrupt sources
- Up to five external interrupts
- Seven programmable priority levels
- Five processor exceptions

### Digital I/O:

- Up to 85 programmable digital I/O pins
- Wake-up/Interrupt-on-Change on up to 24 pins
- Output pins can drive from 3.0V to 3.6V
- All digital input pins are 5V tolerant
- 4 mA sink on all I/O pins

### On-Chip Flash and SRAM:

- Flash program memory, up to 256 Kbytes
- Data SRAM, up to 16 Kbytes (includes 2 Kbytes of DMA RAM)

### System Management:

- Flexible clock options:
  - External, crystal, resonator, internal RC
  - Fully integrated PLL
  - Extremely low jitter PLL
- Power-up Timer
- Oscillator Start-up Timer/Stabilizer
- Watchdog Timer with its own RC oscillator
- Fail-Safe Clock Monitor
- Reset by multiple sources

### Power Management:

- On-chip 2.5V voltage regulator
- Switch between clock sources in real time
- Idle, Sleep and Doze modes with fast wake-up

### Timers/Capture/Compare/PWM:

- Timer/Counters, up to nine 16-bit timers:
  - Can pair up to make four 32-bit timers
  - One timer runs as Real-Time Clock with external 32.768 kHz oscillator
  - Programmable prescaler
- Input Capture (up to eight channels):
  - Capture on up, down or both edges
  - 16-bit capture input functions
  - 4-deep FIFO on each capture
- Output Compare (up to eight channels):
  - Single or Dual 16-Bit Compare mode
  - 16-bit Glitchless PWM mode

# PIC24HJXXXGPX06/X08/X10

## PIC24H PRODUCT FAMILIES

The PIC24H Family of devices is ideal for a wide variety of 16-bit MCU embedded applications. The device names, pin counts, memory sizes and peripheral availability of each device are listed below, followed by their pinout diagrams.

### PIC24H Family Controllers

Device	Pins	Program Flash Memory (KB)	RAM <sup>(1)</sup> (KB)	DMA Channels	Timer 16-bit	Input Capture	Output Compare Std. PWM	Codec Interface	ADC	UART	SPI	I <sup>2</sup> C™	CAN	I/O Pins (Max) <sup>(2)</sup>	Packages

 This bit must not be set to '1' by the user application.

## 18.0 UNIVERSAL ASYNCHRONOUS RECEIVER TRANSMITTER (UART)

**Note:** This data sheet summarizes the features of the PIC24HJXXXGPX06/X08/X10 family of devices. However, it is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to the “PIC24H Family Reference Manual”, Section 17. “UART” (DS70232), which is available from the Microchip website (www.microchip.com).

The Universal Asynchronous Receiver Transmitter (UART) module is one of the serial I/O modules available in the PIC24HJXXXGPX06/X08/X10 device family. The UART is a full-duplex asynchronous system that can communicate with peripheral devices, such as personal computers, LIN, RS-232 and RS-485 interfaces. The module also supports a hardware flow control option with the  $\overline{UxCTS}$  and  $\overline{UxRTS}$  pins and also includes an IrDA® encoder and decoder.

The primary features of the UART module are:

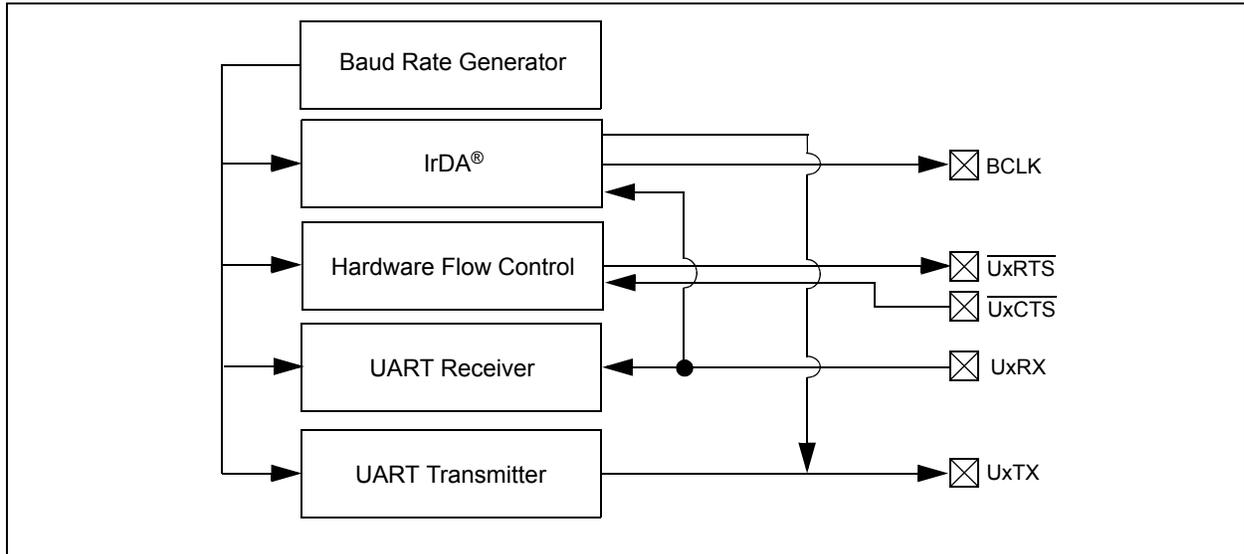

- Full-Duplex, 8 or 9-bit Data Transmission through the  $UxTX$  and  $UxRX$  pins
- Even, Odd or No Parity Options (for 8-bit data)
- One or Two Stop bits

- Hardware Flow Control Option with  $\overline{UxCTS}$  and  $\overline{UxRTS}$  pins
- Fully Integrated Baud Rate Generator with 16-bit Prescaler
- Baud rates ranging from 1 Mbps to 15 bps at 16x mode at 40 MIPS
- Baud rates ranging from 4 Mbps to 61 bps at 4x mode at 40 MIPS
- 4-deep First-In-First-Out (FIFO) Transmit Data Buffer
- 4-Deep FIFO Receive Data Buffer
- Parity, Framing and Buffer Overrun Error Detection
- Support for 9-bit mode with Address Detect (9th bit = 1)
- Transmit and Receive Interrupts
- A Separate Interrupt for all UART Error Conditions
- Loopback mode for Diagnostic Support
- Support for Sync and Break Characters
- Supports Automatic Baud Rate Detection
- IrDA® Encoder and Decoder Logic
- 16x Baud Clock Output for IrDA® Support

A simplified block diagram of the UART is shown in Figure 18-1. The UART module consists of the key important hardware elements:

- Baud Rate Generator
- Asynchronous Transmitter
- Asynchronous Receiver

**FIGURE 18-1: UART SIMPLIFIED BLOCK DIAGRAM**

**Note 1:** Both UART1 and UART2 can trigger a DMA data transfer. If U1TX, U1RX, U2TX or U2RX is selected as a DMA IRQ source, a DMA transfer occurs when the U1TXIF, U1RXIF, U2TXIF or U2RXIF bit gets set as a result of a UART1 or UART2 transmission or reception.

**2:** If DMA transfers are required, the UART TX/RX FIFO buffer must be set to a size of 1 byte/word (i.e.,  $UTXISEL<1:0> = 00$  and  $URXISEL<1:0> = 00$ ).

## REGISTER 20-1: ADxCON1: ADCx CONTROL REGISTER 1 (where x = 1 or 2) (CONTINUED)

- bit 3      **SIMSAM:** Simultaneous Sample Select bit (only applicable when CHPS<1:0> = 01 or 1x)  
**When AD12B = 1, SIMSAM is: U-0, Unimplemented, Read as '0'**  
1 = Samples CH0, CH1, CH2, CH3 simultaneously (when CHPS<1:0> = 1x); or  
    Samples CH0 and CH1 simultaneously (when CHPS<1:0> = 01)  
0 = Samples multiple channels individually in sequence
- bit 2      **ASAM:** ADC Sample Auto-Start bit  
1 = Sampling begins immediately after last conversion. SAMP bit is auto-set  
0 = Sampling begins when SAMP bit is set
- bit 1      **SAMP:** ADC Sample Enable bit  
1 = ADC sample/hold amplifiers are sampling  
0 = ADC sample/hold amplifiers are holding  
If ASAM = 0, software may write '1' to begin sampling. Automatically set by hardware if ASAM = 1.  
If SSRC = 000, software may write '0' to end sampling and start conversion. If SSRC ≠ 000,  
automatically cleared by hardware to end sampling and start conversion.
- bit 0      **DONE:** ADC Conversion Status bit  
1 = ADC conversion cycle is completed.  
0 = ADC conversion not started or in progress  
Automatically set by hardware when analog-to-digital conversion is complete. Software may write '0'  
to clear DONE status (software not allowed to write '1'). Clearing this bit will NOT affect any operation  
in progress. Automatically cleared by hardware at start of a new conversion.

## 23.2 MPASM Assembler

The MPASM Assembler is a full-featured, universal macro assembler for all PIC MCUs.

The MPASM Assembler generates relocatable object files for the MPLINK Object Linker, Intel® standard HEX files, MAP files to detail memory usage and symbol reference, absolute LST files that contain source lines and generated machine code and COFF files for debugging.

The MPASM Assembler features include:

- Integration into MPLAB IDE projects
- User-defined macros to streamline assembly code
- Conditional assembly for multi-purpose source files
- Directives that allow complete control over the assembly process

## 23.3 MPLAB C18 and MPLAB C30 C Compilers

The MPLAB C18 and MPLAB C30 Code Development Systems are complete ANSI C compilers for Microchip's PIC18 and PIC24 families of microcontrollers and the dsPIC30 and dsPIC33 family of digital signal controllers. These compilers provide powerful integration capabilities, superior code optimization and ease of use not found with other compilers.

For easy source level debugging, the compilers provide symbol information that is optimized to the MPLAB IDE debugger.

## 23.4 MPLINK Object Linker/ MPLIB Object Librarian

The MPLINK Object Linker combines relocatable objects created by the MPASM Assembler and the MPLAB C18 C Compiler. It can link relocatable objects from precompiled libraries, using directives from a linker script.

The MPLIB Object Librarian manages the creation and modification of library files of precompiled code. When a routine from a library is called from a source file, only the modules that contain that routine will be linked in with the application. This allows large libraries to be used efficiently in many different applications.

The object linker/library features include:

- Efficient linking of single libraries instead of many smaller files
- Enhanced code maintainability by grouping related modules together
- Flexible creation of libraries with easy module listing, replacement, deletion and extraction

## 23.5 MPLAB ASM30 Assembler, Linker and Librarian

MPLAB ASM30 Assembler produces relocatable machine code from symbolic assembly language for dsPIC30F devices. MPLAB C30 C Compiler uses the assembler to produce its object file. The assembler generates relocatable object files that can then be archived or linked with other relocatable object files and archives to create an executable file. Notable features of the assembler include:

- Support for the entire dsPIC30F instruction set
- Support for fixed-point and floating-point data
- Command line interface
- Rich directive set
- Flexible macro language
- MPLAB IDE compatibility

## 23.6 MPLAB SIM Software Simulator

The MPLAB SIM Software Simulator allows code development in a PC-hosted environment by simulating the PIC MCUs and dsPIC® DSCs on an instruction level. On any given instruction, the data areas can be examined or modified and stimuli can be applied from a comprehensive stimulus controller. Registers can be logged to files for further run-time analysis. The trace buffer and logic analyzer display extend the power of the simulator to record and track program execution, actions on I/O, most peripherals and internal registers.

The MPLAB SIM Software Simulator fully supports symbolic debugging using the MPLAB C18 and MPLAB C30 C Compilers, and the MPASM and MPLAB ASM30 Assemblers. The software simulator offers the flexibility to develop and debug code outside of the hardware laboratory environment, making it an excellent, economical software development tool.

IM50	CB	Bus Capacitive Loading		—	400	pF	—

**Note 1:** BRG is the value of the I<sup>2</sup>C Baud Rate Generator. Refer to **Section 19. “Inter-Integrated Circuit™ (I<sup>2</sup>C™)”** (DS70235) in the “PIC24H Family Reference Manual”. Please see the Microchip website ([www.microchip.com](http://www.microchip.com)) for the latest PIC24H Family Reference Manual chapters.

**2:** Maximum pin capacitance = 10 pF for all I2Cx pins (for 1 MHz mode only).

# PIC24HJXXXGPX06/X08/X10

**TABLE 24-39: ADC CONVERSION (10-BIT MODE) TIMING REQUIREMENTS**

AC CHARACTERISTICS			Standard Operating Conditions: 3.0V to 3.6V (unless otherwise stated) Operating temperature $-40^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$ for Industrial				
Param No.	Symbol	Characteristic	Min.	Typ <sup>(1)</sup>	Max.	Units	Conditions
<b>Clock Parameters</b>							
AD50	TAD	ADC Clock Period	76	—	—	ns	—
AD51	trc	ADC Internal RC Oscillator Period	—	250	—	ns	—
<b>Conversion Rate</b>							
AD55	tCONV	Conversion Time	—	12 TAD	—	—	—
AD56	FCNV	Throughput Rate	—	—	1.1	Msp/s	—
AD57	TSAMP	Sample Time	2 TAD	—	—	—	—
<b>Timing Parameters</b>							
AD60	tPCS	Conversion Start from Sample Trigger <sup>(2)</sup>	2.0 TAD	—	3.0 TAD	—	Auto-Convert Trigger not selected
AD61	tpSS	Sample Start from Setting Sample (SAMP) bit <sup>(2)</sup>	2.0 TAD	—	3.0 TAD	—	—
AD62	tcSS	Conversion Completion to Sample Start (ASAM = 1) <sup>(2)</sup>	—	0.5 TAD	—	—	—
AD63	tDPU	Time to Stabilize Analog Stage from ADC Off to ADC On <sup>(2,3)</sup>	—	—	20	$\mu\text{s}$	—

- Note 1:** These parameters are characterized but not tested in manufacturing.
- 2:** Because the sample caps eventually loses charge, clock rates below 10 kHz may affect linearity performance, especially at elevated temperatures.
- 3:** tDPU is the time required for the ADC module to stabilize when it is turned on (AD1CON1<ADON> = 1). During this time, the ADC result is indeterminate.
