Infineon Technologies - MB96F623RBPMC1-GSE1 Datasheet

Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

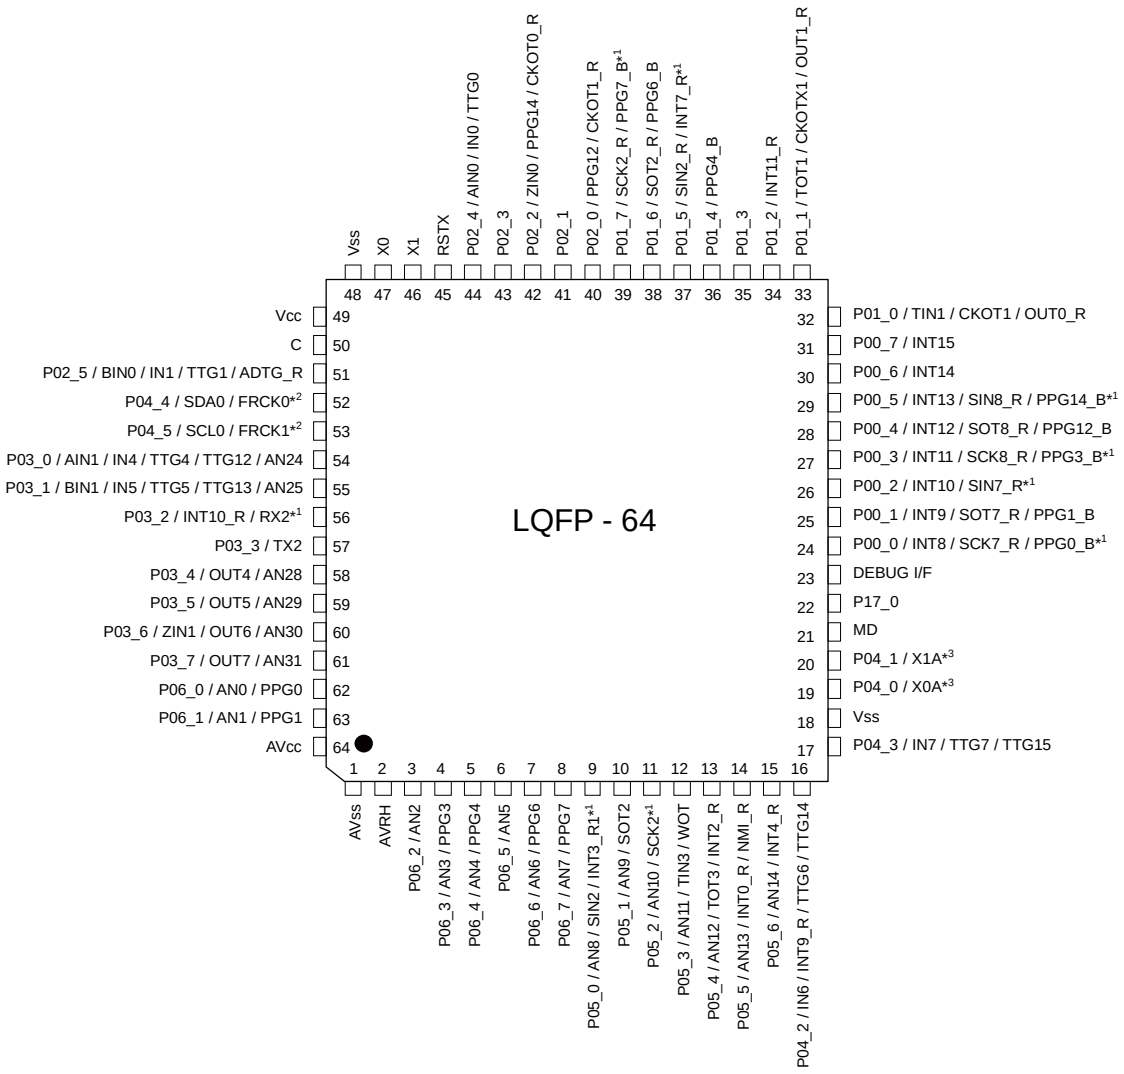
"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Obsolete
Core Processor	F²MC-16FX
Core Size	16-Bit
Speed	32MHz
Connectivity	CANbus, I²C, LINbus, SCI, UART/USART
Peripherals	DMA, LVD, POR, PWM, WDT
Number of I/O	52
Program Memory Size	96KB (96K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	10K x 8
Voltage - Supply (Vcc/Vdd)	2.7V ~ 5.5V
Data Converters	A/D 21x8/10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 125°C (TA)
Mounting Type	Surface Mount
Package / Case	64-LQFP
Supplier Device Package	64-LQFP (10x10)
Purchase URL	https://www.e-xfl.com/product-detail/infineon-technologies/mb96f623rbpmc1-gse1

3. Pin Assignment

(Top view)



(FPT-64P-M23/M24)

*1: CMOS input level only

*2: CMOS input level only for I^2C

*3: Please set ROM Configuration Block (RCB) to use the subclock.

Other than those above, general-purpose pins have only Automotive input level.

Type	Circuit	Remarks
F		Power supply input protection circuit
G		• A/D converter ref+ (AVRH) power supply input pin with protection circuit • Without protection circuit against V_{CC} for pins AVRH
H		• CMOS level output (I_{OL} = 4mA, I_{OH} = -4mA) • Automotive input with input shutdown function • Programmable pull-up resistor
I		• CMOS level output (I_{OL} = 4mA, I_{OH} = -4mA) • CMOS hysteresis input with input shutdown function • Programmable pull-up resistor • Analog input

Type	Circuit	Remarks
K		• CMOS level output (I_{OL} = 4mA, I_{OH} = -4mA) • Automotive input with input shutdown function • Programmable pull-up resistor • Analog input
M		• CMOS level output (I_{OL} = 4mA, I_{OH} = -4mA) • CMOS hysteresis input with input shutdown function • Programmable pull-up resistor
N		• CMOS level output (I_{OL} = 3mA, I_{OH} = -3mA) • CMOS hysteresis input with input shutdown function • Programmable pull-up resistor *: N-channel transistor has slew rate control according to I^2C spec, irrespective of usage.

8. RAMSTART Addresses

Devices	Bank 0 RAM size	RAMSTART0
MB96F622	4KB	$00:7200_H$
MB96F623 MB96F625	10KB	$00:5A00_H$

9. User ROM Memory Map For Flash Devices

CPU mode address	Flash memory mode address	MB96F622 Flash size 32.5KB + 32KB	MB96F623 Flash size 64.5KB + 32KB	MB96F625 Flash size 128.5KB + 32KB	
$FF:FFFF_H$ $FF:8000_H$	$3F:FFFF_H$ $3F:8000_H$	SA39 - 32KB	SA39 - 64KB	SA39 - 64KB	Bank A of Flash A
$FF:7FFF_H$ $FF:0000_H$	$3F:7FFF_H$ $3F:0000_H$	Reserved			
$FE:FFFF_H$ $FE:0000_H$	$3E:FFFF_H$ $3E:0000_H$		Reserved	SA38 - 64KB	
$FD:FFFF_H$ $DF:A000_H$				Reserved	
$DF:9FFF_H$ $DF:8000_H$	$1F:9FFF_H$ $1F:8000_H$	SA4 - 8KB	SA4 - 8KB	SA4 - 8KB	Bank B of Flash A
$DF:7FFF_H$ $DF:6000_H$	$1F:7FFF_H$ $1F:6000_H$	SA3 - 8KB	SA3 - 8KB	SA3 - 8KB	
$DF:5FFF_H$ $DF:4000_H$	$1F:5FFF_H$ $1F:4000_H$	SA2 - 8KB	SA2 - 8KB	SA2 - 8KB	
$DF:3FFF_H$ $DF:2000_H$	$1F:3FFF_H$ $1F:2000_H$	SA1 - 8KB	SA1 - 8KB	SA1 - 8KB	
$DF:1FFF_H$ $DF:0000_H$	$1F:1FFF_H$ $1F:0000_H$	SAS - 512B*	SAS - 512B*	SAS - 512B*	Bank A of Flash A
$DE:FFFF_H$ $DE:0000_H$		Reserved	Reserved	Reserved	

*: Physical address area of SAS-512B is from $DF:0000_H$ to $DF:01FF_H$.
Others (from $DF:0200_H$ to $DF:1FFF_H$) is mirror area of SAS-512B.
Sector SAS contains the ROM configuration block RCBA at CPU address $DF:0000_H$ -$DF:01FF_H$.
SAS can not be used for E^2PROM emulation.

11. Interrupt Vector Table

Vector number	Offset in vector table	Vector name	Cleared by DMA	Index in ICR to program	Description
0	$3FC_H$	CALLV0	No	-	CALLV instruction
1	$3F8_H$	CALLV1	No	-	CALLV instruction
2	$3F4_H$	CALLV2	No	-	CALLV instruction
3	$3F0_H$	CALLV3	No	-	CALLV instruction
4	$3EC_H$	CALLV4	No	-	CALLV instruction
5	$3E8_H$	CALLV5	No	-	CALLV instruction
6	$3E4_H$	CALLV6	No	-	CALLV instruction
7	$3E0_H$	CALLV7	No	-	CALLV instruction
8	$3DC_H$	RESET	No	-	Reset vector
9	$3D8_H$	INT9	No	-	INT9 instruction
10	$3D4_H$	EXCEPTION	No	-	Undefined instruction execution
11	$3D0_H$	NMI	No	-	Non-Maskable Interrupt
12	$3CC_H$	DLY	No	12	Delayed Interrupt
13	$3C8_H$	RC_TIMER	No	13	RC Clock Timer
14	$3C4_H$	MC_TIMER	No	14	Main Clock Timer
15	$3C0_H$	SC_TIMER	No	15	Sub Clock Timer
16	$3BC_H$	LVDI	No	16	Low Voltage Detector
17	$3B8_H$	EXTINT0	Yes	17	External Interrupt 0

80	2BCH	-	-	80	Reserved

12. Handling Precautions

Any semiconductor devices have inherently a certain rate of failure. The possibility of failure is greatly affected by the conditions in which they are used (circuit conditions, environmental conditions, etc.). This page describes precautions that must be observed to minimize the chance of failure and to obtain higher reliability from your Cypress semiconductor devices.

12.1 Precautions for Product Design

This section describes precautions when designing electronic equipment using semiconductor devices.

■Absolute Maximum Ratings

Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of certain established limits, called absolute maximum ratings. Do not exceed these ratings.

■Recommended Operating Conditions

Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their sales representative beforehand.

■Processing and Protection of Pins

These precautions must be followed when handling the pins which connect semiconductor devices to power supply and input/output functions.

1. Preventing Over-Voltage and Over-Current Conditions

   Exposure to voltage or current levels in excess of maximum ratings at any pin is likely to cause deterioration within the device, and in extreme cases leads to permanent damage of the device. Try to prevent such overvoltage or over-current conditions at the design stage.
2. Protection of Output Pins

   Shorting of output pins to supply pins or other output pins, or connection to large capacitance can cause large current flows. Such conditions if present for extended periods of time can damage the device.
   Therefore, avoid this type of connection.
3. Handling of Unused Input Pins

   Unconnected input pins with very high impedance levels can adversely affect stability of operation. Such pins should be connected through an appropriate resistance to a power supply pin or ground pin.

■Latch-up

Semiconductor devices are constructed by the formation of P-type and N-type areas on a substrate. When subjected to abnormally high voltages, internal parasitic PNPN junctions (called thyristor structures) may be formed, causing large current levels in excess of several hundred mA to flow continuously at the power supply pin. This condition is called latch-up.

CAUTION: The occurrence of latch-up not only causes loss of reliability in the semiconductor device, but can cause injury or damage from high heat, smoke or flame. To prevent this from happening, do the following:

1. Be sure that voltages applied to pins do not exceed the absolute maximum ratings. This should include attention to abnormal noise, surge levels, etc.
2. Be sure that abnormal current flows do not occur during the power-on sequence.

■Observance of Safety Regulations and Standards

Most countries in the world have established standards and regulations regarding safety, protection from electromagnetic interference, etc. Customers are requested to observe applicable regulations and standards in the design of products.

■Fail-Safe Design

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

■Precautions Related to Usage of Devices
Cypress semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

CAUTION: Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

12.2 Precautions for Package Mounting
Package mounting may be either lead insertion type or surface mount type. In either case, for heat resistance during soldering, you should only mount under Cypress's recommended conditions. For detailed information about mount conditions, contact your sales representative.

■Lead Insertion Type
Mounting of lead insertion type packages onto printed circuit boards may be done by two methods: direct soldering on the board, or mounting by using a socket.

Direct mounting onto boards normally involves processes for inserting leads into through-holes on the board and using the flow soldering (wave soldering) method of applying liquid solder. In this case, the soldering process usually causes leads to be subjected to thermal stress in excess of the absolute ratings for storage temperature. Mounting processes should conform to Cypress recommended mounting conditions.

If socket mounting is used, differences in surface treatment of the socket contacts and IC lead surfaces can lead to contact deterioration after long periods. For this reason it is recommended that the surface treatment of socket contacts and IC leads be verified before mounting.

■Surface Mount Type
Surface mount packaging has longer and thinner leads than lead-insertion packaging, and therefore leads are more easily deformed or bent. The use of packages with higher pin counts and narrower pin pitch results in increased susceptibility to open connections caused by deformed pins, or shorting due to solder bridges.

You must use appropriate mounting techniques. Cypress recommends the solder reflow method, and has established a ranking of mounting conditions for each product. Users are advised to mount packages in accordance with Cypress ranking of recommended conditions.

■Lead-Free Packaging
CAUTION: When ball grid array (BGA) packages with Sn-Ag-Cu balls are mounted using Sn-Pb eutectic soldering, junction strength may be reduced under some conditions of use.

■Storage of Semiconductor Devices
Because plastic chip packages are formed from plastic resins, exposure to natural environmental conditions will cause absorption of moisture. During mounting, the application of heat to a package that has absorbed moisture can cause surfaces to peel, reducing moisture resistance and causing packages to crack. To prevent, do the following:

1. Avoid exposure to rapid temperature changes, which cause moisture to condense inside the product. Store products in locations where temperature changes are slight.
2. Use dry boxes for product storage. Products should be stored below 70% relative humidity, and at temperatures between 5°C and 30°C.
   When you open Dry Package that recommends humidity 40% to 70% relative humidity.
3. When necessary, Cypress packages semiconductor devices in highly moisture-resistant aluminum laminate bags, with a silica gel desiccant. Devices should be sealed in their aluminum laminate bags for storage.
4. Avoid storing packages where they are exposed to corrosive gases or high levels of dust.

■Baking
Packages that have absorbed moisture may be de-moisturized by baking (heat drying). Follow the Cypress recommended conditions for baking.

Condition: 125°C/24 h

14.2 Recommended Operating Conditions

(V_{SS} = AV_{SS} = 0V)

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Power supply voltage	V_{CC}, AV_{CC}	2.7	-	5.5	V	
		2.0	-	5.5	V	Maintains RAM data in stop mode
Smoothing capacitor at C pin	C_S	0.5	1.0 to 3.9	4.7	µF	1.0µF (Allowance within ± 50%) 3.9µF (Allowance within ± 20%) Please use the ceramic capacitor or the capacitor of the frequency response of this level. The smoothing capacitor at V_{CC} must use the one of a capacity value that is larger than C_S.

WARNING

The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure. No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their representatives beforehand.

14.3 DC Characteristics

14.3.1 Current Rating

(V_{CC} = AV_{CC} = 2.7V to 5.5V, V_{SS} = AV_{SS} = 0V, T_A = - 40°C to + 125°C)

*1: The power supply current is measured with a 4MHz external clock connected to the Main oscillator and a 32kHz external clock connected to the Sub oscillator. See chapter “Standby mode and voltage regulator control circuit” of the Hardware Manual for further details about voltage regulator control. Current for "On Chip Debugger" part is not included. Power supply current in Run mode does not include Flash Write / Erase current.

*2: The power supply current in Timer mode is the value when Flash is in Power-down / reset mode. When Flash is not in Power-down / reset mode, $I_{CCFLASHPD}$ must be added to the Power supply current.

The power supply current is measured with a 4MHz external clock connected to the Main oscillator and a 32kHz external clock connected to the Sub oscillator. The current for "On Chip Debugger" part is not included.

*3: The power supply current in Stop mode is the value when Flash is in Power-down / reset mode.

When Flash is not in Power-down / reset mode, $I_{CCFLASHPD}$ must be added to the Power supply current.

*4: When low voltage detector is enabled, I_{CCLVD} must be added to Power supply current.

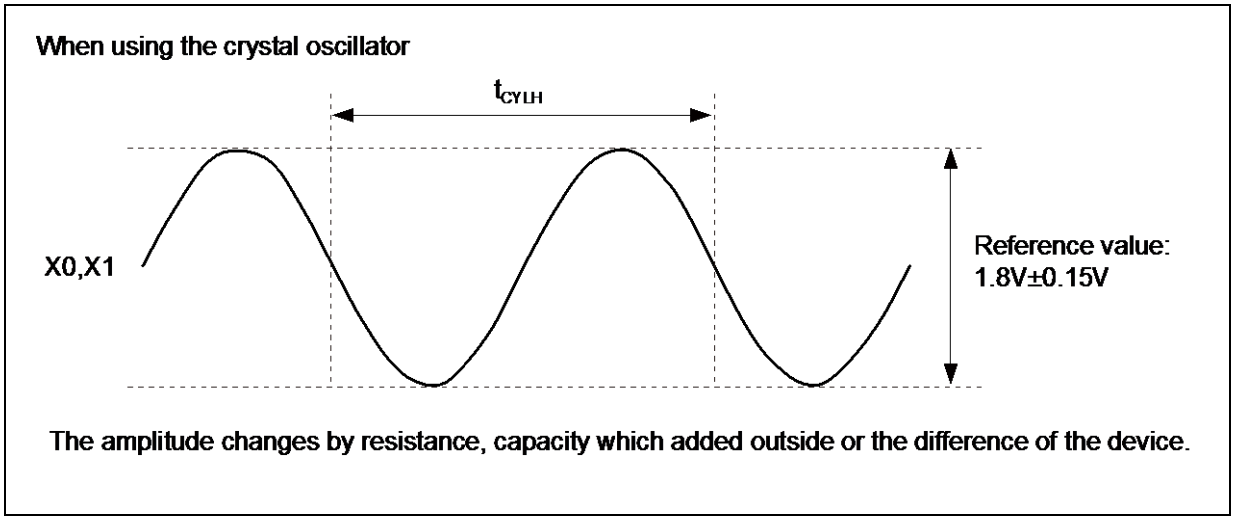
*5: When Flash Write / Erase program is executed, $I_{CCFLASH}$ must be added to Power supply current.

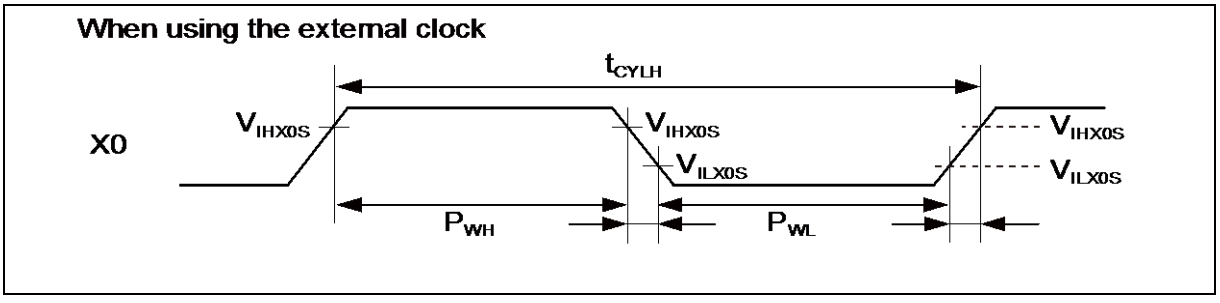
14.4 AC Characteristics

14.4.1 Main Clock Input Characteristics

(V_{CC} = AV_{CC} = 2.7V to 5.5V, VD=1.8V±0.15V, V_{SS} = AV_{SS} = 0V, T_A = - 40°C to + 125°C)

Parameter	Symbol	Pin name	Value			Unit	Remarks
			Min	Typ	Max		
Input frequency	f_C	X0, X1	4	-	8	MHz	When using a crystal oscillator, PLL off
			-	-	8	MHz	When using an opposite phase external clock, PLL off
			4	-	8	MHz	When using a crystal oscillator or opposite phase external clock, PLL on
Input frequency	f_{FCI}	X0	-	-	8	MHz	When using a single phase external clock in “Fast Clock Input mode”, PLL off
			4	-	8	MHz	When using a single phase external clock in “Fast Clock Input mode”, PLL on
Input clock cycle	t_{CYLH}	-	125	-	-	ns	
Input clock pulse width	P_{WH}, P_{WL}	-	55	-	-	ns	

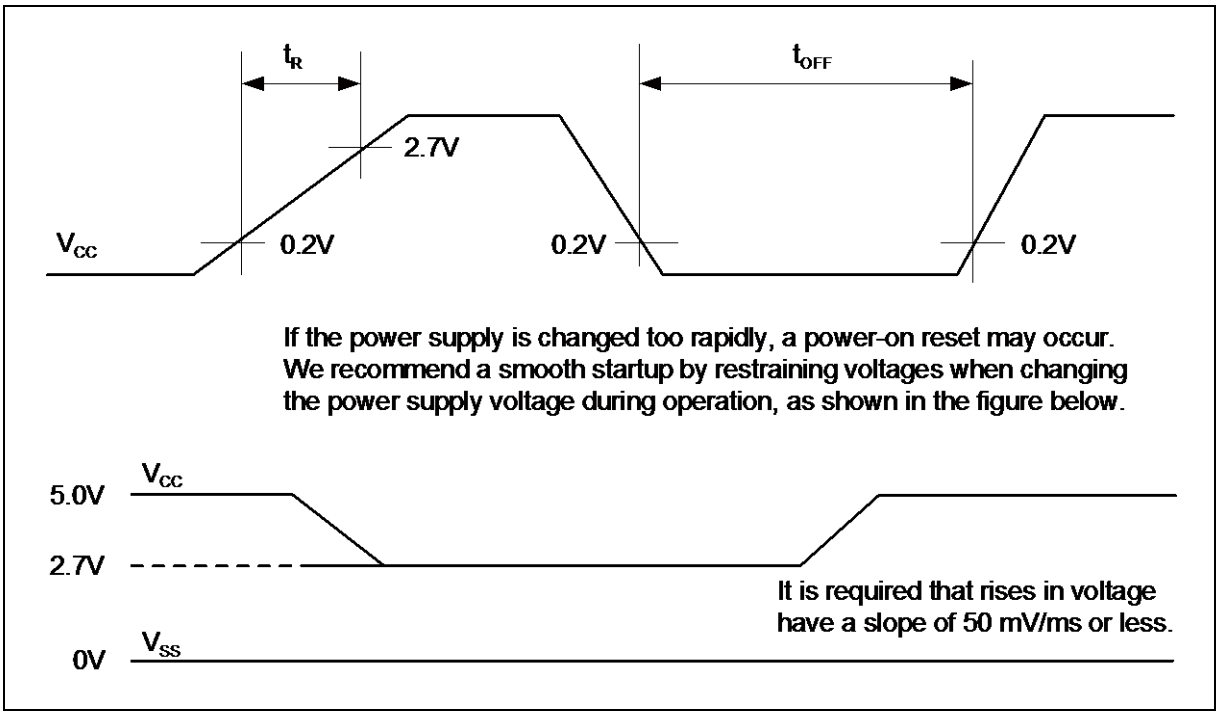




14.4.7 Power-on Reset Timing

(V_{CC} = AV_{CC} = 2.7V to 5.5V, V_{SS} = AV_{SS} = 0V, T_A = - 40°C to + 125°C)

Parameter	Symbol	Pin name	Value			Unit
			Min	Typ	Max	
Power on rise time	t_R	Vcc	0.05	-	30	ms
Power off time	t_{OFF}	Vcc	1	-	-	ms



14.4.8 USART Timing

(V_{CC} = AV_{CC} = 2.7V to 5.5V, V_{SS} = AV_{SS} = 0V, T_A = - 40°C to + 125°C, C_L=50pF)

Parameter	Symbol	Pin name	Conditions	4.5V ≤ V_{CC} < 5.5V		2.7V ≤ V_{CC} < 4.5V		Unit
				Min	Max	Min	Max	
Serial clock cycle time	t_{SCYC}	SCKn	Internal shift clock mode	$4t_{CLKP1}$	-	$4t_{CLKP1}$	-	ns
SCK ↓ → SOT delay time	t_{SLOVI}	SCKn, SOTn		- 20	+ 20	- 30	+ 30	ns
SOT → SCK ↑ delay time	t_{OVSHI}	SCKn, SOTn		$N \times t_{CLKP1}$ – 20*	-	$N \times t_{CLKP1}$ – 30*	-	ns
SIN → SCK ↑ setup time	t_{IVSHI}	SCKn, SINn		t_{CLKP1} + 45	-	t_{CLKP1} + 55	-	ns
SCK ↑ → SIN hold time	t_{SHIXI}	SCKn, SINn		0	-	0	-	ns
Serial clock "L" pulse width	t_{SLSH}	SCKn	External shift clock mode	t_{CLKP1} + 10	-	t_{CLKP1} + 10	-	ns
Serial clock "H" pulse width	t_{SHSL}	SCKn		t_{CLKP1} + 10	-	t_{CLKP1} + 10	-	ns
SCK ↓ → SOT delay time	t_{SLOVE}	SCKn, SOTn		-	$2t_{CLKP1}$ + 45	-	$2t_{CLKP1}$ + 55	ns
SIN → SCK ↑ setup time	t_{IVSHE}	SCKn, SINn		$t_{CLKP1}/2$ + 10	-	$t_{CLKP1}/2$ + 10	-	ns
SCK ↑ → SIN hold time	t_{SHIXE}	SCKn, SINn		t_{CLKP1} + 10	-	t_{CLKP1} + 10	-	ns
SCK fall time	t_F	SCKn		-	20	-	20	ns
SCK rise time	t_R	SCKn		-	20	-	20	ns

Notes:

- AC characteristic in CLK synchronized mode.
- C_L is the load capacity value of pins when testing.
- Depending on the used machine clock frequency, the maximum possible baud rate can be limited by some parameters. These parameters are shown in “MB96600 series HARDWARE MANUAL”.
- t_{CLKP1} indicates the peripheral clock 1 (CLKP1), Unit: ns
- These characteristics only guarantee the same relocate port number.
  For example, the combination of SCKn and SOTn_R is not guaranteed.

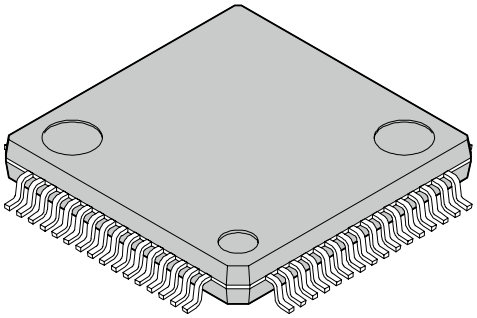
*: Parameter N depends on t_{SCYC} and can be calculated as follows:

- If $t_{SCYC} = 2 \times k \times t_{CLKP1}$, then N = k, where k is an integer > 2
- If $t_{SCYC} = (2 \times k + 1) \times t_{CLKP1}$, then N = k + 1, where k is an integer > 1

Examples:

t_{SCYC}	N
$4 \times t_{CLKP1}$	2
$5 \times t_{CLKP1}$, $6 \times t_{CLKP1}$	3
$7 \times t_{CLKP1}$, $8 \times t_{CLKP1}$	4
…	…

64-pin plastic LQFP

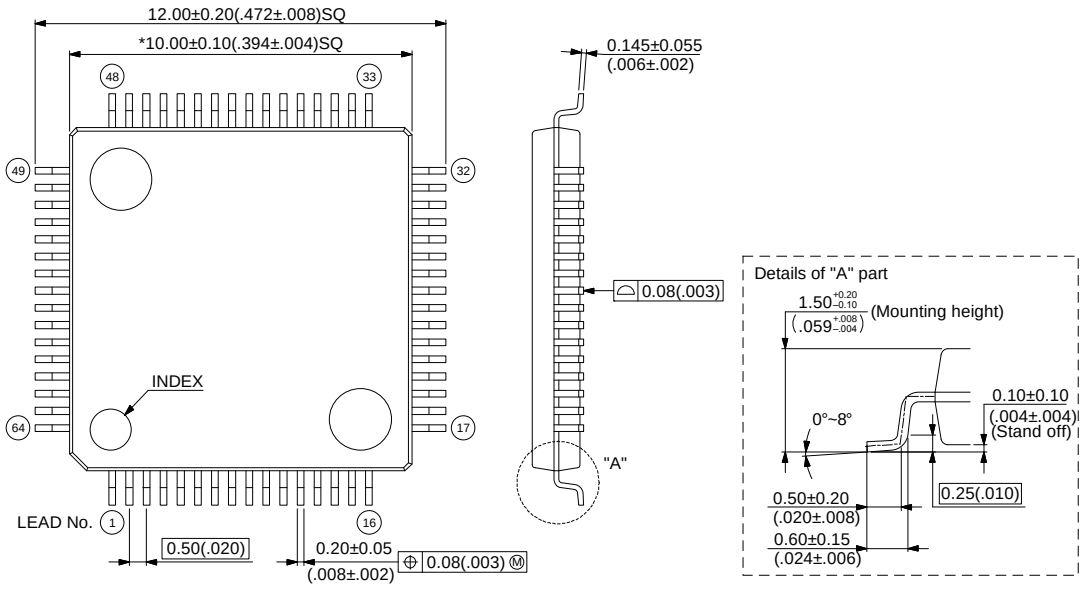


(FPT-64P-M24)

Lead pitch	0.50 mm
Package width × package length	10.0 × 10.0 mm
Lead shape	Gullwing
Sealing method	Plastic mold
Mounting height	1.70 mm MAX
Weight	0.32 g
Code (Reference)	P-LFQFP64-10×10-0.50

64-pin plastic LQFP
(FPT-64P-M24)

Note 1) * : These dimensions do not include resin protrusion.
Note 2) Pins width and pins thickness include plating thickness.
Note 3) Pins width do not include tie bar cutting remainder.



Dimensions in mm (inches).
Note: The values in parentheses are reference values

Page	Section	Change Results
56	Electrical Characteristics 7. Flash Memory Write/Erase Characteristics	Changed the Note While the Flash memory is written or erased, shutdown of the external power (V_{CC}) is prohibited. In the application system where the external power (V_{CC}) might be shut down while writing, be sure to turn the power off by using an external voltage detector. → While the Flash memory is written or erased, shutdown of the external power (V_{CC}) is prohibited. In the application system where the external power (V_{CC}) might be shut down while writing or erasing, be sure to turn the power off by using a low voltage detection function.
