

Welcome to [E-XFL.COM](#)

### What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "[Embedded - Microcontrollers](#)"

#### Details

|                            |                                                                                                                                                                             |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Product Status             | Not For New Designs                                                                                                                                                         |
| Core Processor             | M32C/80                                                                                                                                                                     |
| Core Size                  | 16/32-Bit                                                                                                                                                                   |
| Speed                      | 32MHz                                                                                                                                                                       |
| Connectivity               | CANbus, I <sup>2</sup> C, IEBus, SIO, UART/USART                                                                                                                            |
| Peripherals                | DMA, WDT                                                                                                                                                                    |
| Number of I/O              | 85                                                                                                                                                                          |
| Program Memory Size        | 384KB (384K x 8)                                                                                                                                                            |
| Program Memory Type        | FLASH                                                                                                                                                                       |
| EEPROM Size                | 4K x 8                                                                                                                                                                      |
| RAM Size                   | 24K x 8                                                                                                                                                                     |
| Voltage - Supply (Vcc/Vdd) | 3V ~ 5.5V                                                                                                                                                                   |
| Data Converters            | A/D 26x10b; D/A 2x8b                                                                                                                                                        |
| Oscillator Type            | Internal                                                                                                                                                                    |
| Operating Temperature      | -20°C ~ 85°C (TA)                                                                                                                                                           |
| Mounting Type              | Surface Mount                                                                                                                                                               |
| Package / Case             | 100-BQFP                                                                                                                                                                    |
| Supplier Device Package    | 100-QFP (14x20)                                                                                                                                                             |

## Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
  - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

## NOTES:

1. Bus control pins in M32C/85T cannot be used.

**Table 1.4 Pin Characteristics for 144-Pin Package (Continued)**

| Pin No. | Control Pin | Port | Interrupt Pin | Timer Pin | UART/CAN Pin    | Intelligent I/O Pin         | Analog Pin | Bus Control Pin <sup>(1)</sup> |
|---------|-------------|------|---------------|-----------|-----------------|-----------------------------|------------|--------------------------------|
| 97      |             | P24  |               |           |                 |                             | AN24       | A4(/D4)                        |

X: Indeterminate

Blank spaces are reserved. No access is allowed.

NOTES:

1. The PM01 and PM00 bits in the PM0 register maintain values set before reset, even after software reset or watch-dog timer reset has been performed.
2. These registers in M32C/85T cannot be used.

## NOTES:

1. P11 to P15 are provided in the 144-pin package only.

$$V_{CC1}=V_{CC2}=5V$$

**Switching Characteristics**

( $V_{CC1} = V_{CC2} = 4.2$  to  $5.5V$ ,  $V_{SS} = 0V$  at  $T_{opr} = -20$  to  $85^{\circ}C$  unless otherwise specified)

| tW(WR)      | WR Output Width                                                  |                       | (Note 2) |      | ns   |

**NOTES:**

1. Values can be obtained from the following equations, according to BCLK frequency.

$$t_{h(WR-DB)} = \frac{10^9}{f_{(BCLK)} \times 2} - 10 \quad [ns]$$

$$t_{h(WR-AD)} = \frac{10^9}{f_{(BCLK)} \times 2} - 10 \quad [ns]$$

$$t_{h(WR-CS)} = \frac{10^9}{f_{(BCLK)} \times 2} - 10 \quad [ns]$$

2. Values can be obtained from the following equations, according to BCLK frequency and external bus cycles.

$$t_{w(WR)} = \frac{10^9 \times n}{f_{(BCLK)} \times 2} - 15 \quad [ns] \quad (\text{if external bus cycle is } a\phi + b\phi, n=(bx2)-1)$$

$$t_{d(DB-WR)} = \frac{10^9 \times m}{f_{(BCLK)}} - 20 \quad [ns] \quad (\text{if external bus cycle is } a\phi + b\phi, m=b)$$

3. tc ns is added when recovery cycle is inserted.

$$V_{CC1}=V_{CC2}=3.3V$$

**Timing Requirements**

( $V_{CC1}=V_{CC2}= 3.0$  to  $3.6V$ ,  $V_{SS}= 0V$  at  $T_{opr} = -20$  to  $85^{\circ}C$  unless otherwise specified)

## NOTES:

- Typical values when average output current is 100ms.
- Total I<sub>OL(peak)</sub> for P0, P1, P2, P86, P87, P9, P10, P11, P14 and P15 must be 80mA or less.  
Total I<sub>OL(peak)</sub> for P3, P4, P5, P6, P7, P80 to P84, P12 and P13 must be 80mA or less.  
Total I<sub>OH(peak)</sub> for P0, P1, P2, and P11 must be -40mA or less.  
Total I<sub>OH(peak)</sub> for P86, P87, P9, P10, P14 and P15 must be -40mA or less.  
Total I<sub>OH(peak)</sub> for P3, P4, P5, P12 and P13 must be -40mA or less.  
Total I<sub>OH(peak)</sub> for P6, P7, and P80 to P84 must be -40mA or less.
- V<sub>IH</sub> and V<sub>IL</sub> reference for P87 applies when P87 is used as a programmable input port.  
It does not apply when P87 is used as X<sub>CIN</sub>.
- P11 to P15 are provided in the 144-pin package only.

$$V_{CC1}=V_{CC2}=5V$$

NOTES:

1. *n* denotes the number of block to be erased.

2. Number of program-erase cycles per block.

If Program and Erase Endurance is *n* cycle (*n*≠100), each block can be erased and programmed *n* cycles.

For example, if a 4-Kbyte block A is erased after programming a word data 2,048 times, each to a different address, this counts as one program and erase endurance. Data can not be programmed to the same address more than once without erasing the block. (rewrite prohibited).
