### What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "[Embedded - Microcontrollers](#)"

#### Details

|                            |                                                                                                                                                               |

## 1. Pin Configurations

**Figure 1-1.** Pinout of ATtiny24A/44A/84A

**Table 1-1.** UFBGA - Pinout ATtiny24A/44A/84A (top view)

|          | 1   | 2   | 3   | 4   |
|----------|-----|-----|-----|-----|
| <b>A</b> |     | PA5 | PA6 | PB2 |
| <b>B</b> | PA4 | PA7 | PB1 | PB3 |
| <b>C</b> | PA3 | PA2 | PA1 | PB0 |
| <b>D</b> | PA0 | GND | GND | VCC |

## **1.1 Pin Descriptions**

### **1.1.1 VCC**

Supply voltage.

### **1.1.2 GND**

Ground.

### **1.1.3 Port B (PB3:PB0)**

Port B is a 4-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port B output buffers have symmetrical drive characteristics with both high sink and source capability except PB3 which has the  $\overline{\text{RESET}}$  capability. To use pin PB3 as an I/O pin, instead of RESET pin, program ('0') RSTDISBL fuse. As inputs, Port B pins that are externally pulled low will source current if the pull-up resistors are activated. The Port B pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port B also serves the functions of various special features of the ATtiny24A/44A/84A as listed in [Section 10.2 "Alternate Port Functions" on page 58](#).

### **1.1.4 $\overline{\text{RESET}}$**

Reset input. A low level on this pin for longer than the minimum pulse length will generate a reset, even if the clock is not running and provided the reset pin has not been disabled. The minimum pulse length is given in [Table 20-4 on page 176](#). Shorter pulses are not guaranteed to generate a reset.

The reset pin can also be used as a (weak) I/O pin.

### **1.1.5 Port A (PA7:PA0)**

Port A is a 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port A output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port A pins that are externally pulled low will source current if the pull-up resistors are activated. The Port A pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port A has alternate functions as analog inputs for the ADC, analog comparator, timer/counter, SPI and pin change interrupt as described in ["Alternate Port Functions" on page 58](#).

## 2. Overview

ATtiny24A/44A/84A are low-power CMOS 8-bit microcontrollers based on the AVR enhanced RISC architecture. By executing powerful instructions in a single clock cycle, the ATtiny24A/44A/84A achieves throughputs approaching 1 MIPS per MHz allowing the system designer to optimize power consumption versus processing speed.

**Figure 2-1.** Block Diagram

The AVR core combines a rich instruction set with 32 general purpose working registers. All 32 registers are directly connected to the Arithmetic Logic Unit (ALU), allowing two independent registers to be accessed in one single instruction executed in one clock cycle. The resulting architecture is more code efficient while achieving throughputs up to ten times faster than conventional CISC microcontrollers.

The ATtiny24A/44A/84A provides the following features: 2K/4K/8K byte of In-System Programmable Flash, 128/256/512 bytes EEPROM, 128/256/512 bytes SRAM, 12 general purpose I/O lines, 32 general purpose working registers, an 8-bit Timer/Counter with two PWM channels, a 16-bit timer/counter with two PWM channels, Internal and External Interrupts, a 8-channel 10-bit ADC, programmable gain stage (1x, 20x) for 12 differential ADC channel pairs, a programmable Watchdog Timer with internal oscillator, internal calibrated oscillator, and four software selectable power saving modes. Idle mode stops the CPU while allowing the SRAM, Timer/Counter, ADC, Analog Comparator, and Interrupt system to continue functioning. ADC Noise Reduction mode minimizes switching noise during ADC conversions by stopping the CPU and all I/O modules except the ADC. In Power-down mode registers keep their contents and all chip functions are disabled until the next interrupt or hardware reset. In Standby mode, the crystal/resonator oscillator is running while the rest of the device is sleeping, allowing very fast start-up combined with low power consumption.

The device is manufactured using Atmel's high density non-volatile memory technology. The on-chip ISP Flash allows the Program memory to be re-programmed in-system through an SPI serial interface, by a conventional non-volatile memory programmer or by an on-chip boot code running on the AVR core.

The ATtiny24A/44A/84A AVR is supported with a full suite of program and system development tools including: C Compilers, Macro Assemblers, Program Debugger/Simulators and Evaluation kits.

## 3. General Information

### 3.1 Resources

A comprehensive set of drivers, application notes, data sheets and descriptions on development tools are available for download at <http://www.atmel.com/avr>.

### 3.2 Code Examples

This documentation contains simple code examples that briefly show how to use various parts of the device. These code examples assume that the part specific header file is included before compilation. Be aware that not all C compiler vendors include bit definitions in the header files and interrupt handling in C is compiler dependent. Please confirm with the C compiler documentation for more details.

For I/O Registers located in the extended I/O map, “IN”, “OUT”, “SBIS”, “SBIC”, “CBI”, and “SBI” instructions must be replaced with instructions that allow access to extended I/O. Typically, this means “LDS” and “STS” combined with “SBRS”, “SBRC”, “SBR”, and “CBR”. Note that not all AVR devices include an extended I/O map.

### 3.3 Capacitive Touch Sensing

Atmel QTouch Library provides a simple to use solution for touch sensitive interfaces on Atmel AVR microcontrollers. The QTouch Library includes support for QTouch® and QMatrix® acquisition methods.

Touch sensing is easily added to any application by linking the QTouch Library and using the Application Programming Interface (API) of the library to define the touch channels and sensors. The application then calls the API to retrieve channel information and determine the state of the touch sensor.

The QTouch Library is free and can be downloaded from the Atmel website. For more information and details of implementation, refer to the QTouch Library User Guide – also available from the Atmel website.

### 3.4 Data Retention

Reliability Qualification results show that the projected data retention failure rate is much less than 1 PPM over 20 years at 85°C or 100 years at 25°C.

### 3.5 Disclaimer

Typical values contained in this datasheet are based on simulations and characterization of other AVR microcontrollers manufactured on the same process technology. Min and Max values will be available after the device has been characterized.

## 4. Register Summary

| Address     | Name     | Bit 7                                             | Bit 6  | Bit 5  | Bit 4  | Bit 3   | Bit 2   | Bit 1   | Bit 0   | Page             |

- Note:
1. For compatibility with future devices, reserved bits should be written to zero if accessed. Reserved I/O memory addresses should never be written.
  2. I/O Registers within the address range 0x00 - 0x1F are directly bit-accessible using the SBI and CBI instructions. In these registers, the value of single bits can be checked by using the SBIS and SBIC instructions.
  3. Some of the Status Flags are cleared by writing a logical one to them. Note that, unlike most other AVRs, the CBI and SBI instructions will only operation the specified bit, and can therefore be used on registers containing such Status Flags. The CBI and SBI instructions work with registers 0x00 to 0x1F only.

## 5. Instruction Set Summary

| Mnemonics                                | Operands | Description                            | Operation                                                          | Flags      | #Clocks |

- Notes:
1. For speed vs. supply voltage, see section [20.3 "Speed" on page 174](#).
  2. All packages are Pb-free, halide-free and fully green and they comply with the European directive for Restriction of Hazardous Substances (RoHS)
  3. Code indicators:
    - H: NiPdAu lead finish
    - F, N, U: matte tin
    - R: tape & reel
  4. Topside marking for ATtiny24A: T24 / Axx / manufacturing data
  5. Also supplied in wafer form. Contact your local Atmel sales office for ordering information and minimum quantities.
  6. For typical and electrical characteristics, see "Appendix A – ATtiny24A/44A Specification at 105°C".
  7. For typical and electrical characteristics, see "Appendix B – ATtiny24A/44A/84A Specification at 125°C".

| Package Type |                                                                                                                  |
|--------------|------------------------------------------------------------------------------------------------------------------|
| <b>14S1</b>  | 14-lead, 0.150" Wide Body, Plastic Gull Wing Small Outline Package (SOIC)                                        |
| <b>14P3</b>  | 14-lead, 0.300" Wide, Plastic Dual Inline Package (PDIP)                                                         |
| <b>15CC1</b> | 15-ball (4 x 4 Array), 0.65 mm Pitch, 3.0 x 3.0 x 0.6 mm, Ultra Thin, Fine-Pitch Ball Grid Array Package (UFBGA) |
| <b>20M1</b>  | 20-pad, 4 x 4 x 0.8 mm Body, Quad Flat No Lead / Micro Lead Frame Package (QFN/MLF)                              |
| <b>20M2</b>  | 20-pad, 3 x 3 x 0.85 mm Body, Very Thin Quad Flat No Lead Package (VQFN)                                         |

| Package Type |                                                                                                                  |
|--------------|------------------------------------------------------------------------------------------------------------------|
| <b>14S1</b>  | 14-lead, 0.150" Wide Body, Plastic Gull Wing Small Outline Package (SOIC)                                        |
| <b>14P3</b>  | 14-lead, 0.300" Wide, Plastic Dual Inline Package (PDIP)                                                         |
| <b>15CC1</b> | 15-ball (4 x 4 Array), 0.65 mm Pitch, 3.0 x 3.0 x 0.6 mm, Ultra Thin, Fine-Pitch Ball Grid Array Package (UFBGA) |
| <b>20M1</b>  | 20-pad, 4 x 4 x 0.8 mm Body, Quad Flat No Lead / Micro Lead Frame Package (QFN/MLF)                              |
| <b>20M2</b>  | 20-pad, 3 x 3 x 0.85 mm Body, Very Thin Quad Flat No Lead Package (VQFN)                                         |

- Notes:
1. This drawing is for general information only; refer to JEDEC Drawing MS-012, Variation AB for additional information.
  2. Dimension D does not include mold Flash, protrusions or gate burrs. Mold Flash, protrusion and gate burrs shall not exceed 0.15 mm (0.006") per side.
  3. Dimension E does not include inter-lead Flash or protrusion. Inter-lead flash and protrusions shall not exceed 0.25 mm (0.010") per side.
  4. L is the length of the terminal for soldering to a substrate.
  5. The lead width B, as measured 0.36 mm (0.014") or greater above the seating plane, shall not exceed a maximum value of 0.61 mm (0.024") per side.

## **8. Errata**

The revision letters in this section refer to the revision of the corresponding ATtiny24A/44A/84A device.

### **8.1 ATtiny24A**

#### **8.1.1 Rev. H**

No known errata.

#### **8.1.2 Rev. G**

Not sampled.

#### **8.1.3 Rev. F**

Not sampled.

### **8.2 ATtiny44A**

#### **8.2.1 Rev. G**

No known errata. Yield improvement.

#### **8.2.2 Rev. F**

No known errata.

#### **8.2.3 Rev. E**

Not sampled.

### **8.3 ATtiny84A**

#### **8.3.1 Rev. C**

No known errata.

## 9. Datasheet Revision History

### 9.1 Rev. 8183F – 06/12

1. Updated:
  - [Table 16-1 on page 138](#)
  - [Figure 16-7 on page 137](#)
  - [“Ordering Information” on page 11](#)

### 9.2 Rev. 8183E – 01/12

1. Updated:
  - Production status for ATtiny24A and ATtiny84A
  - [“Start Condition Detector” on page 122](#)
  - [“Ordering Information” on page 11, 12, and 13](#)

### 9.3 Rev. 8183D – 04/11

1. Added errata for ATtiny44A rev. G in [Section 8. “Errata” on page 19](#)

### 9.4 Rev. 8183C – 03/11

1. Added:
  - ATtiny84A, including typical characteristics plots
  - [Section 3.3 “Capacitive Touch Sensing” on page 6](#)
  - [Table 6-8, “Capacitance of Low-Frequency Crystal Oscillator,” on page 28](#)
  - Analog Comparator Offset plots for ATtiny24A ([Figure 21.2.10 on page 208](#)) and ATtiny44A ([Figure 21.3.11 on page 236](#))
  - Extended temperature part numbers in [Section 6. “Ordering Information” on page 11](#)
2. Updated:
  - Bit syntax throughout the datasheet, e.g. from CS02:0 to CS0[2:0]
  - [Section 6.4 “Clock Output Buffer” on page 30](#), changed CLK0 to CKOUT
  - [Table 16-4, “Single-Ended Input channel Selections,” on page 145](#), added note for Internal 1.1V Reference
  - [Table 19-16, “High-voltage Serial Programming Instruction Set for ATtiny24A/44A/84A,” on page 170](#), adjusted notes
  - [Table 20-1, “DC Characteristics. TA = -40°C to +85°C,” on page 173](#), adjusted notes

### 9.5 Rev. 8183B – 03/10

1. Updated template.
2. Added UFBGA package (15CC1) in: [“Features” on page 1](#), [“Pin Configurations” on page 2](#), [Section 6. “Ordering Information” on page 11](#), and [Section 7.3 “15CC1” on page 16](#).
3. Separated typical characteristic plots, added [Section 21.2 “ATtiny24A” on page 183](#).
4. Updated sections:
  - [Section 14.5.4 “USIBR – USI Buffer Register” on page 127](#), header updated

- Section 6. “Ordering Information” on page 11, added tape & reel and topside marking, updated notes
- 5. Updated Figures:
  - Figure 4-1 “Block Diagram of the AVR Architecture” on page 7
  - Figure 8-1 “Reset Logic” on page 38
  - Figure 14-1 “Universal Serial Interface, Block Diagram” on page 116, USIDB -> USIBR
  - Figure 19-5 “High-voltage Serial Programming Waveforms” on page 169
- 6. Updated Tables:
  - Table 19-11, “Minimum Wait Delay Before Writing the Next Flash or EEPROM Location,” on page 164, updated value for  $t_{WD\_ERASE}$

## 9.6 Rev. 8183A – 12/08

1. Initial revision. Created from document 8006H.
2. Updated “Ordering Information” on page 19 and page 19. Pb-plated packages are no longer offered and there are no separate ordering codes for commercial operation range, the only available option now is industrial. Also, updated some order codes to reflect changes in leadframe composition and added VQFN package option.
3. Updated data sheet template.
4. Removed all references to 8K device.
5. Updated characteristic plots of section “Typical Characteristics”, starting on page 182.
6. Added characteristic plots:
  - “Bandgap Voltage vs. Supply Voltage” on page 233
  - “Bandgap Voltage vs. Temperature” on page 233
7. Updated sections:
  - “Features” on page 1
  - “Power Reduction Register” on page 35
  - “Analog Comparator” on page 128
  - “Features” on page 132
  - “Operation” on page 133
  - “Starting a Conversion” on page 134
  - “ADC Voltage Reference” on page 139
  - “Speed” on page 174
8. Updated Figures:
  - “Program Memory Map” on page 15
  - “Data Memory Map” on page 16
9. Update Tables:
  - “Device Signature Bytes” on page 161
  - “DC Characteristics. TA = -40°C to +85°C” on page 173
  - “Additional Current Consumption for the different I/O modules (absolute values)” on page 182
  - “Additional Current Consumption (percentage) in Active and Idle mode” on page 183
