Understanding Embedded - Microprocessors

Embedded microprocessors are specialized computing chips designed to perform specific tasks within an embedded system. Unlike general-purpose microprocessors found in personal computers, embedded microprocessors are tailored for dedicated functions within larger systems, offering optimized performance, efficiency, and reliability. These microprocessors are integral to the operation of countless electronic devices, providing the computational power necessary for controlling processes, handling data, and managing communications.

Applications of Embedded - Microprocessors

Embedded microprocessors are utilized across a broad spectrum of applications, making them indispensable in

1 Must be tied to ground.

2 Should be tied to VDDH via a 2K Ω external pull-up resistor.

3 The default configuration of the CPM pins (PA[8–31], PB[18–31], PC[0–1,4–29], PD[7–25, 29–31]) is input. To prevent excessive DC current, it is recommended either to pull unused pins to GND or VDDH, or to configure them as outputs.

4 This pin is not connected. It should be left floating.

5 Must be pulled down or left floating

10 Ordering Information

This figure provides an example of the Freescale part numbering nomenclature for the SoC. In addition to the processor frequency, the part numbering scheme also consists of a part modifier that indicates any enhancement(s) in the part from the original production design. Each part number also contains a revision code that refers to the die mask revision number and is specified in the part numbering scheme for identification purposes only. For more information, contact your local Freescale sales office.

11 Document Revision History

This table summarizes changes to this document.

Table 23. Document Revision History

Revision	Date	Substantive Changes
3	09/2011	In Figure 15, “Freescale Part Number Key,” added speed decoding information below processor frequency information.
2	12/2008	• Modified Figure 5, “SCC/SMC/SPI/I2C External Clock Diagram,” and added second section of figure notes. • In Table 12, modified “Data bus in pipeline mode” row and showed 66 MHz as “N/A.” • In Section 10, “Ordering Information,” added “F = 133” to CPU/CPM/Bus Frequency. • Added footnote concerning CPM_CLK/PCI_CLK ratio to column “PCI Division Factor” in Table 17, “Clock Configurations for PCI Host Mode (PCI_MODCK=0),” and Table 18, “Clock Configurations for PCI Host Mode (PCI_MODCK=1),.” • Removed overbar from DLL_ENABLE in Table 21, “Pinout.”
1.5	12/2006	• Section 6, “AC Electrical Characteristics,” removed deratings statement and clarified AC timing descriptions.
1.4	05/2006	• Added row for 133 MHz configurations to Table 8.
1.3	02/2006	• Inserted Section 6.3, “JTAG Timings.”
