#### What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

#### Details

Betuils	
Product Status	Obsolete
Core Processor	MIPS32® M4K™
Core Size	32-Bit Single-Core
Speed	40MHz
Connectivity	I <sup>2</sup> C, IrDA, LINbus, SPI, UART/USART
Peripherals	Brown-out Detect/Reset, DMA, I <sup>2</sup> S, POR, PWM, WDT
Number of I/O	35
Program Memory Size	256KB (256K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	64K x 8
Voltage - Supply (Vcc/Vdd)	2.3V ~ 3.6V
Data Converters	A/D 13x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 105°C (TA)
Mounting Type	Surface Mount
Package / Case	44-VFTLA Exposed Pad
Supplier Device Package	44-VTLA (6x6)

#### 4.0 MEMORY ORGANIZATION

Note: This data sheet summarizes the features of the PIC32MX1XX/2XX 28/36/44-pin Family of devices. It is not intended to be a comprehensive reference source.For detailed information, refer to **Section 3.** "Memory Organization" (DS60001115), which is available from the *Documentation* > *Reference Manual* section of the Microchip PIC32 web site (www.microchip.com/pic32).

PIC32MX1XX/2XX 28/36/44-pin Family microcontrollers provide 4 GB unified virtual memory address space. All memory regions, including program, data memory, Special Function Registers (SFRs), and Configuration registers, reside in this address space at their respective unique addresses. The program and data memories can be optionally partitioned into user and kernel memories. In addition, the data memory can be made executable, allowing PIC32MX1XX/2XX 28/36/44-pin Family devices to execute from data memory.

Key features include:

- 32-bit native data width
- Separate User (KUSEG) and Kernel (KSEG0/KSEG1) mode address space
- · Flexible program Flash memory partitioning
- Flexible data RAM partitioning for data and program space
- Separate boot Flash memory for protected code
- Robust bus exception handling to intercept runaway code
- Simple memory mapping with Fixed Mapping Translation (FMT) unit
- Cacheable (KSEG0) and non-cacheable (KSEG1) address regions

#### 4.1 PIC32MX1XX/2XX 28/36/44-pin Family Memory Layout

PIC32MX1XX/2XX 28/36/44-pin Family microcontrollers implement two address schemes: virtual and physical. All hardware resources, such as program memory, data memory and peripherals, are located at their respective physical addresses. Virtual addresses are exclusively used by the CPU to fetch and execute instructions as well as access peripherals. Physical addresses are used by bus master peripherals, such as DMA and the Flash controller, that access memory independently of the CPU.

The memory maps for the PIC32MX1XX/2XX 28/36/44-pin Family devices are illustrated in Figure 4-1 through Figure 4-6.

Table 4-1 provides SFR memory map details.

  - 2: If ASAM = 0, software can write a '1' to start sampling. This bit is automatically set by hardware if ASAM = 1. If SSRC = 0, software can write a '0' to end sampling and start conversion. If SSRC ≠ '0', this bit is automatically cleared by hardware to end sampling and start conversion.
  - **3:** This bit is automatically set by hardware when analog-to-digital conversion is complete. Software can write a '0' to clear this bit (a write of '1' is not allowed). Clearing this bit does not affect any operation already in progress. This bit is automatically cleared by hardware at the start of a new conversion.

#### TABLE 30-17: EXTERNAL CLOCK TIMING REQUIREMENTS

Note 1: Data in "Typical" column is at 3.3V, 25°C unless otherwise stated. Parameters are characterized but are not tested.

2: Instruction cycle period (Tcr) equals the input oscillator time base period. All specified values are based on characterization data for that particular oscillator type under standard operating conditions with the device executing code. Exceeding these specified limits may result in an unstable oscillator operation and/or higher than expected current consumption. All devices are tested to operate at "min." values with an external clock applied to the OSC1/CLKI pin.

3: PLL input requirements: 4 MHz  $\leq$  FPLLIN  $\leq$  5 MHz (use PLL prescaler to reduce FOSC). This parameter is characterized, but tested at 10 MHz only at manufacturing.

4: This parameter is characterized, but not tested in manufacturing.

TABLE A-1:	MAJOR SECTION UPDATES (CONTINUED)
------------	-----------------------------------

Section	Update Description
29.0 "Electrical Characteristics"	Updated the Absolute Maximum Ratings (removed Voltage on VCORE with respect to Vss).
	Added the SPDIP specification to the Thermal Packaging Characteristics (see Table 29-2).
	Updated the Typical values for parameters DC20-DC24 in the Operating Current (IDD) specification (see Table 29-5).
	Updated the Typical values for parameters DC30a-DC34a in the Idle Current (IIDLE) specification (see Table 29-6).
	Updated the Typical values for parameters DC40i and DC40n and removed parameter DC40m in the Power-down Current (IPD) specification (see Table 29-7).
	Removed parameter D320 (VCORE) from the Internal Voltage Regulator Specifications and updated the Comments (see Table 29-13).
	Updated the Minimum, Typical, and Maximum values for parameter F20b in the Internal FRC Accuracy specification (see Table 29-17).
	Removed parameter SY01 (TPWRT) and removed all Conditions from Resets Timing (see Table 29-20).
	Updated all parameters in the CTMU Specifications (see Table 29-39).
31.0 "Packaging Information"	Added the 28-lead SPDIP package diagram information (see <b>31.1</b> "Package Marking Information" and <b>31.2</b> "Package Details").
"Product Identification System"	Added the SPDIP (SP) package definition.

#### Revision C (November 2011)

All major changes are referenced by their respective section in Table A-2.

TABLE A-2:	MAJOR SECTION UPDATES
------------	-----------------------

Section	Update Description
"32-bit Microcontrollers (up to 128 KB Flash and 32 KB SRAM) with Audio and Graphics Interfaces, USB, and Advanced Analog"	Revised the source/sink on I/O pins (see "Input/Output" on page 1). Added the SPDIP package to the PIC32MX220F032B device in the PIC32MX2XX USB Family Features (see Table 2).
4.0 "Memory Organization"	Removed ANSB6 from the ANSELB register and added the ODCB6, ODCB10, and ODCB11 bits in the PORTB Register Map (see Table 4-20).
29.0 "Electrical Characteristics"	Updated the minimum value for parameter OS50 in the PLL Clock Timing Specifications (see Table 29-16).

NOTES:
