### Understanding **Embedded - FPGAs (Field Programmable Gate Array)**

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

## Revision History

This section records the change history for this module of the data sheet.

| Date     | Version | Revision                                                                                                                                |
|----------|---------|-----------------------------------------------------------------------------------------------------------------------------------------|
| 11/07/00 | 1.0     | Early access draft.                                                                                                                     |
| 12/06/00 | 1.1     | Initial release.                                                                                                                        |
| 01/15/01 | 1.2     | Added values to the tables in the <b>Virtex-II Performance Characteristics</b> and <b>Virtex-II Switching Characteristics</b> sections. |
| 01/25/01 | 1.3     | The data sheet was divided into four modules (per the current style standard).                                                          |
| 04/02/01 | 1.5     | Skipped v1.4 to sync up modules. Reverted to traditional double-column format.                                                          |
| 07/30/01 | 1.6     | Made minor changes to items listed under <b>Summary of Virtex-II™ Features</b> .                                                        |
| 10/02/01 | 1.7     | Minor edits.                                                                                                                            |
| 07/16/02 | 1.8     | Updated Virtex-II Device/Package Combinations shown in <b>Table 6</b> .                                                                 |
| 09/26/02 | 1.9     | Updated <b>Table 2</b> and <b>Table 6</b> to reflect supported Virtex-II Device/Package Combinations.                                   |
| 08/01/03 | 2.0     | All Virtex-II devices and speed grades now Production. See Table 13, Module 3.                                                          |
| 03/29/04 | 2.0.1   | Recompiled for backward compatibility with Acrobat 4 and above. No content changes.                                                     |
| 06/24/04 | 3.3     | Added references to available Pb-free wire-bond packages. (Revision number advanced to level of complete data sheet.)                   |
| 03/01/05 | 3.4     | <i>No changes in Module 1 for this revision.</i>                                                                                        |
| 11/05/07 | 3.5     | Updated copyright notice and legal disclaimer.                                                                                          |

## Notice of Disclaimer

THE XILINX HARDWARE FPGA AND CPLD DEVICES REFERRED TO HEREIN ("PRODUCTS") ARE SUBJECT TO THE TERMS AND CONDITIONS OF THE XILINX LIMITED WARRANTY WHICH CAN BE VIEWED AT <http://www.xilinx.com/warranty.htm>. THIS LIMITED WARRANTY DOES NOT EXTEND TO ANY USE OF PRODUCTS IN AN APPLICATION OR ENVIRONMENT THAT IS NOT WITHIN THE SPECIFICATIONS STATED IN THE XILINX DATA SHEET. ALL SPECIFICATIONS ARE SUBJECT TO CHANGE WITHOUT NOTICE. PRODUCTS ARE NOT DESIGNED OR INTENDED TO BE FAIL-SAFE OR FOR USE IN ANY APPLICATION REQUIRING FAIL-SAFE PERFORMANCE, SUCH AS LIFE-SUPPORT OR SAFETY DEVICES OR SYSTEMS, OR ANY OTHER APPLICATION THAT INVOKES THE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). USE OF PRODUCTS IN CRITICAL APPLICATIONS IS AT THE SOLE RISK OF CUSTOMER, SUBJECT TO APPLICABLE LAWS AND REGULATIONS.

## Virtex-II Data Sheet

The Virtex-II Data Sheet contains the following modules:

- **Virtex-II Platform FPGAs: Introduction and Overview (Module 1)**
- **Virtex-II Platform FPGAs: Functional Description (Module 2)**
- **Virtex-II Platform FPGAs: DC and Switching Characteristics (Module 3)**
- **Virtex-II Platform FPGAs: Pinout Information (Module 4)**

**Figure 16: Virtex-II Slice (Top Half)**

Figure 18, Figure 19, and Figure 20 illustrate various example configurations.

Figure 18: Distributed SelectRAM (RAM16x1S)

Figure 20: Dual-Port Distributed SelectRAM (RAM16x1D)

Figure 19: Single-Port Distributed SelectRAM (RAM32x1S)

Similar to the RAM configuration, each function generator (LUT) can implement a 16 x 1-bit ROM. Five configurations are available: ROM16x1, ROM32x1, ROM64x1, ROM128x1, and ROM256x1. The ROM elements are cascadable to implement wider or/and deeper ROM. ROM contents are loaded at configuration. Table 10 shows the number of LUTs occupied by each configuration.

Table 10: ROM Configuration

| ROM     | Number of LUTs |
|---------|----------------|
| 16 x 1  | 1              |
| 32 x 1  | 2              |
| 64 x 1  | 4              |
| 128 x 1 | 8 (1 CLB)      |
| 256 x 1 | 16 (2 CLBs)    |

Each SelectRAM memory and multiplier block is tied to four switch matrices, as shown in Figure 35.

Figure 35: SelectRAM and Multiplier Blocks

### Association With Block SelectRAM Memory

The interconnect is designed to allow SelectRAM memory and multiplier blocks to be used at the same time, but some interconnect is shared between the SelectRAM and the multiplier. Thus, SelectRAM memory can be used only up to 18 bits wide when the multiplier is used, because the multiplier shares inputs with the upper data bits of the SelectRAM memory.

This sharing of the interconnect is optimized for an 18-bit-wide block SelectRAM resource feeding the multiplier. The use of SelectRAM memory and the multiplier with an accumulator in LUTs allows for implementation of a digital signal processor (DSP) multiplier-accumulator (MAC) function, which is commonly used in finite and infinite impulse response (FIR and IIR) digital filters.

## Configuration

The multiplier block is an 18-bit by 18-bit signed multiplier (2's complement). Both A and B are 18-bit-wide inputs, and the output is 36 bits. Figure 36 shows a multiplier block.

Figure 36: Multiplier Block

### Locations / Organization

Multiplier organization is identical to the 18 Kbit SelectRAM organization, because each multiplier is associated with an 18 Kbit block SelectRAM resource.

In addition to the built-in multiplier blocks, the CLB elements have dedicated logic to implement efficient multipliers in logic. (Refer to Configurable Logic Blocks (CLBs)).

Table 20: Multiplier Floor Plan

| Device   | Columns | Multipliers |       |
|----------|---------|-------------|-------|
|          |         | Per Column  | Total |
| XC2V40   | 2       | 2           | 4     |
| XC2V80   | 2       | 4           | 8     |
| XC2V250  | 4       | 6           | 24    |
| XC2V500  | 4       | 8           | 32    |
| XC2V1000 | 4       | 10          | 40    |
| XC2V1500 | 4       | 12          | 48    |
| XC2V2000 | 4       | 14          | 56    |
| XC2V3000 | 6       | 16          | 96    |
| XC2V4000 | 6       | 20          | 120   |
| XC2V6000 | 6       | 24          | 144   |
| XC2V8000 | 6       | 28          | 168   |

| Date     | Version | Revision                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## BG575/BGG575 Standard BGA Package

As shown in Table 9, XC2V1000, XC2V1500, and XC2V2000 Virtex-II devices are available in the BG575/BGG575 BGA package. Pins in the XC2V1000, XC2V1500, and XC2V2000 devices are the same, except for the pin differences in the XC2V1000 and XC2V1500 devices shown in the No Connect columns. Following this table are the **BG575/BGG575 Standard BGA Package Specifications (1.27mm pitch)**.

Table 9: BG575/BGG575 BGA — XC2V1000, XC2V1500, and XC2V2000

| Bank | Pin Description  | Pin Number | No Connect in XC2V1000 | No Connect in XC2V1500 |
|------|------------------|------------|------------------------|------------------------|
| 0    | IO_L01N_0        | A3         |                        |                        |
| 0    | IO_L01P_0        | A4         |                        |                        |
