
Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	ARM® Cortex®-M0
Core Size	32-Bit Single-Core
Speed	50MHz
Connectivity	I²C, SPI, UART/USART
Peripherals	Brown-out Detect/Reset, POR, WDT
Number of I/O	28
Program Memory Size	16KB (16K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	4K x 8
Voltage - Supply (Vcc/Vdd)	1.8V ~ 3.6V
Data Converters	A/D 8x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 105°C (TA)
Mounting Type	Surface Mount
Package / Case	32-VQFN Exposed Pad
Supplier Device Package	32-HVQFN (7x7)
Purchase URL	https://www.e-xfl.com/product-detail/nxp-semiconductors/lpc1112jhn33-103e

- LPC1100L series available as TSSOP28 package, DIP28 package, TSSOP20 package, and SO20 package.
- Extended temperature (−40 °C to +105 °C) for selected parts (see Table 2).

3. Applications

- eMetering
- Alarm systems
- Lighting
- White goods

4. Ordering information

Table 1. Ordering information

Type number	Package		
	Name	Description	Version
SO20, TSSOP20, TSSOP28, and DIP28 packages			
LPC1110FD20	SO20	SO20: plastic small outline package; 20 leads; body width 7.5 mm	SOT163-1
LPC1111FDH20/002	TSSOP20	TSSOP20: plastic thin shrink small outline package; 20 leads; body width 4.4 mm	SOT360-1
LPC1112FD20/102	SO20	SO20: plastic small outline package; 20 leads; body width 7.5 mm	SOT163-1
LPC1112FDH20/102	TSSOP20	TSSOP20: plastic thin shrink small outline package; 20 leads; body width 4.4 mm	SOT360-1
LPC1112FDH28/102	TSSOP28	TSSOP28: plastic thin shrink small outline package; 28 leads; body width 4.4 mm	SOT361-1
LPC1114FDH28/102	TSSOP28	TSSOP28: plastic thin shrink small outline package; 28 leads; body width 4.4 mm	SOT361-1
LPC1114FN28/102	DIP28	DIP28: plastic dual in-line package; 28 leads (600 mil)	SOT117-1
HVQFN24/33, LQFP48, and TFBGA48 packages			
LPC1111FHN33/101	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a
LPC1111FHN33/102	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a
LPC1111FHN33/201	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a
LPC1111FHN33/202	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a
LPC1111FHN33/103	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a
LPC1111JHN33/103	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a
LPC1111FHN33/203	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a
LPC1111JHN33/203	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a
LPC1112FHN33/101	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a
LPC1112FHN33/102	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a

6.2 Pin description

Table 4. LPC1100L series: LPC1110/11/12 pin description table (SO20 and TSSOP20 package with I^2C-bus pins)

Symbol	Pin SO20/ TSSOP20	Start logic input	Type	Reset state [1]	Description
PIO0_0 to PIO0_11			I/O		**Port 0 —** Port 0 is a 12-bit I/O port with individual direction and function controls for each bit. The operation of port 0 pins depends on the function selected through the IOCONFIG register block.
$\overline{\text{RESET}}$/PIO0_0	17 [2]	yes	I	I; PU	**$\overline{\text{RESET}}$ —** External reset input with 20 ns glitch filter. A LOW-going pulse as short as 50 ns on this pin resets the device, causing I/O ports and peripherals to take on their default states, and processor execution to begin at address 0. In deep power-down mode, this pin must be pulled HIGH externally. The $\overline{\text{RESET}}$ pin can be left unconnected or be used as a GPIO pin if an external $\overline{\text{RESET}}$ function is not needed and Deep power-down mode is not used.
			I/O	-	**PIO0_0 —** General purpose digital input/output pin with 10 ns glitch filter.
PIO0_1/CLKOUT/ CT32B0_MAT2	18 [3]	yes	I/O	I; PU	**PIO0_1 —** General purpose digital input/output pin. A LOW level on this pin during reset starts the ISP command handler.
			O	-	**CLKOUT —** Clockout pin.
			O	-	**CT32B0_MAT2 —** Match output 2 for 32-bit timer 0.
PIO0_2/SSEL0/ CT16B0_CAP0	19 [3]	yes	I/O	I; PU	**PIO0_2 —** General purpose digital input/output pin.
			I/O	-	**SSEL0 —** Slave Select for SPI0.
			I	-	**CT16B0_CAP0 —** Capture input 0 for 16-bit timer 0.
PIO0_4/SCL	20 [4]	yes	I/O	I; IA	**PIO0_4 —** General purpose digital input/output pin (open-drain).
			I/O	-	**SCL —** I^2C-bus, open-drain clock input/output. High-current sink only if I^2C Fast-mode Plus is selected in the I/O configuration register.
PIO0_5/SDA	5 [4]	yes	I/O	I; IA	**PIO0_5 —** General purpose digital input/output pin (open-drain).
			I/O	-	**SDA —** I^2C-bus, open-drain data input/output. High-current sink only if I^2C Fast-mode Plus is selected in the I/O configuration register.
PIO0_6/SCK0	6 [3]	yes	I/O	I; PU	**PIO0_6 —** General purpose digital input/output pin.
			I/O	-	**SCK0 —** Serial clock for SPI0.
PIO0_8/MISO0/ CT16B0_MAT0	1 [3]	yes	I/O	I; PU	**PIO0_8 —** General purpose digital input/output pin.
			I/O	-	**MISO0 —** Master In Slave Out for SPI0.
			O	-	**CT16B0_MAT0 —** Match output 0 for 16-bit timer 0.
PIO0_9/MOSI0/ CT16B0_MAT1	2 [3]	yes	I/O	I; PU	**PIO0_9 —** General purpose digital input/output pin.
			I/O	-	**MOSI0 —** Master Out Slave In for SPI0.
			O	-	**CT16B0_MAT1 —** Match output 1 for 16-bit timer 0.
SWCLK/PIO0_10/ SCK0/ CT16B0_MAT2	3 [3]	yes	I	I; PU	**SWCLK —** Serial wire clock.
			I/O	-	**PIO0_10 —** General purpose digital input/output pin.
			I/O	-	**SCK0 —** Serial clock for SPI0.
			O	-	**CT16B0_MAT2 —** Match output 2 for 16-bit timer 0.

Table 5. LPC1100L series: LPC1112 pin description table (TSSOP20 with V_{DDA} and V_{SSA} pins) *…continued*

Symbol	Pin TSSOP20	Start logic input	Type	Reset state [1]	Description
SWCLK/PIO0_10/ SCK0/ CT16B0_MAT2	3 [3]	yes	I	I; PU	**SWCLK —** Serial wire clock.
			I/O	-	**PIO0_10 —** General purpose digital input/output pin.
			I/O	-	**SCK0 —** Serial clock for SPI0.
			O	-	**CT16B0_MAT2 —** Match output 2 for 16-bit timer 0.
R/PIO0_11/ AD0/CT32B0_MAT3	4 [4]	yes	I	I; PU	**R —** Reserved. Configure for an alternate function in the IOCONFIG block.
			I/O	-	**PIO0_11 —** General purpose digital input/output pin.
			I	-	**AD0 —** A/D converter, input 0.
			O	-	**CT32B0_MAT3 —** Match output 3 for 32-bit timer 0.
PIO1_0 to PIO1_7			I/O		**Port 1 —** Port 1 is a 12-bit I/O port with individual direction and function controls for each bit. The operation of port 1 pins depends on the function selected through the IOCONFIG register block.
R/PIO1_0/ AD1/CT32B1_CAP0	7 [4]	yes	I	I; PU	**R —** Reserved. Configure for an alternate function in the IOCONFIG block.
			I/O	-	**PIO1_0 —** General purpose digital input/output pin.
			I	-	**AD1 —** A/D converter, input 1.
			I	-	**CT32B1_CAP0 —** Capture input 0 for 32-bit timer 1.
R/PIO1_1/ AD2/CT32B1_MAT0	8 [4]	no	O	I; PU	**R —** Reserved. Configure for an alternate function in the IOCONFIG block.
			I/O	-	**PIO1_1 —** General purpose digital input/output pin.
			I	-	**AD2 —** A/D converter, input 2.
			O	-	**CT32B1_MAT0 —** Match output 0 for 32-bit timer 1.
R/PIO1_2/ AD3/CT32B1_MAT1	9 [4]	no	I	I; PU	**R —** Reserved. Configure for an alternate function in the IOCONFIG block.
			I/O	-	**PIO1_2 —** General purpose digital input/output pin.
			I	-	**AD3 —** A/D converter, input 3.
			O	-	**CT32B1_MAT1 —** Match output 1 for 32-bit timer 1.
SWDIO/PIO1_3/ AD4/CT32B1_MAT2	10 [4]	no	I/O	I; PU	**SWDIO —** Serial wire debug input/output.
			I/O	-	**PIO1_3 —** General purpose digital input/output pin.
			I	-	**AD4 —** A/D converter, input 4.
			O	-	**CT32B1_MAT2 —** Match output 2 for 32-bit timer 1.
PIO1_6/RXD/ CT32B0_MAT0	11 [3]	no	I/O	I; PU	**PIO1_6 —** General purpose digital input/output pin.
			I	-	**RXD —** Receiver input for UART.
			O	-	**CT32B0_MAT0 —** Match output 0 for 32-bit timer 0.
PIO1_7/TXD/ CT32B0_MAT1	12 [3]	no	I/O	I; PU	**PIO1_7 —** General purpose digital input/output pin.
			O	-	**TXD —** Transmitter output for UART.
			O	-	**CT32B0_MAT1 —** Match output 1 for 32-bit timer 0.
V_{DD}	15	-	I	-	3.3 V supply voltage to the internal regulator and the external rail.

Table 5. LPC1100L series: LPC1112 pin description table (TSSOP20 with V_{DDA} and V_{SSA} pins) *…continued*

Symbol	Pin TSSOP20	Start logic input	Type	Reset state [1]	Description
V_{DDA}	5	-	I	-	3.3 V supply voltage to the ADC. Also used as the ADC reference voltage.
XTALIN	14 [5]	-	I	-	Input to the oscillator circuit and internal clock generator circuits. Input voltage must not exceed 1.8 V.
XTALOUT	13 [5]	-	O	-	Output from the oscillator amplifier.
V_{SS}	16	-	I	-	Ground.
V_{SSA}	6	-	I	-	Analog ground.

[1] Pin state at reset for default function: I = Input; O = Output; PU = internal pull-up enabled (pins pulled up to full V_{DD} level); IA = inactive, no pull-up/down enabled.

[2] 5 V tolerant pad. $\overline{\text{RESET}}$ functionality is not available in Deep power-down mode.

[3] 5 V tolerant pad providing digital I/O functions with configurable pull-up/pull-down resistors and configurable hysteresis (see Figure 51).

[4] 5 V tolerant pad providing digital I/O functions with configurable pull-up/pull-down resistors, configurable hysteresis, and analog input. When configured as a ADC input, digital section of the pad is disabled and the pin is not 5 V tolerant (see Figure 51).

[5] When the system oscillator is not used, connect XTALIN and XTALOUT as follows: XTALIN can be left floating or can be grounded (grounding is preferred to reduce susceptibility to noise). XTALOUT should be left floating.

Table 6. LPC1100L series: LPC1112 (HVQFN24 package)

Symbol	HVQFN pin	Start logic input	Type	Reset state [1]	Description
$\overline{\text{RESET}}$/PIO0_0	1[2]	yes	I	I; PU	**$\overline{\text{RESET}}$ —** External reset input with 20 ns glitch filter. A LOW-going pulse as short as 50 ns on this pin resets the device, causing I/O ports and peripherals to take on their default states, and processor execution to begin at address 0. In deep power-down mode, this pin must be pulled HIGH externally. The $\overline{\text{RESET}}$ pin can be left unconnected or be used as a GPIO pin if an external $\overline{\text{RESET}}$ function is not needed and Deep power-down mode is not used.
			I/O	-	**PIO0_0 —** General purpose digital input/output pin with 10 ns glitch filter.
PIO0_1/CLKOUT/ CT32B0_MAT2	2[3]	yes	I/O	I; PU	**PIO0_1 —** General purpose digital input/output pin. A LOW level on this pin during reset starts the ISP command handler.
			O	-	**CLKOUT —** Clockout pin.
			O	-	**CT32B0_MAT2 —** Match output 2 for 32-bit timer 0.
PIO0_2/SSEL0/ CT16B0_CAP0	7[3]	yes	I/O	I; PU	**PIO0_2 —** General purpose digital input/output pin.
			I/O	-	**SSEL0 —** Slave Select for SPI0.
			I	-	**CT16B0_CAP0 —** Capture input 0 for 16-bit timer 0.
PIO0_4/SCL	8[4]	yes	I/O	I; IA	**PIO0_4 —** General purpose digital input/output pin (open-drain).
			I/O	-	**SCL —** I^2C-bus, open-drain clock input/output. High-current sink only if I^2C Fast-mode Plus is selected in the I/O configuration register.

7. Functional description

7.1 ARM Cortex-M0 processor

The ARM Cortex-M0 is a general purpose, 32-bit microprocessor, which offers high performance and very low power consumption.

7.2 On-chip flash program memory

The LPC1110/11/12/13/14/15 contain 64 kB (LPC1115), 56 kB (LPC1114/333), 48 kB (LPC1114/323), 32 kB (LPC1114), 24 kB (LPC1113), 16 kB (LPC1112), 8 kB (LPC1111) or 4 kB (LPC1110) of on-chip flash memory.

7.3 On-chip SRAM

The LPC1110/11/12/13/14/15 contain a total of 8 kB, 4 kB, 2 kB, or 1 kB on-chip static RAM memory.

7.4 Memory map

The LPC1110/11/12/13/14/15 incorporate several distinct memory regions, shown in the following figures. Figure 14 shows the overall map of the entire address space from the user program viewpoint following reset. The interrupt vector area supports address remapping.

The AHB peripheral area is 2 MB in size, and is divided to allow for up to 128 peripherals. The APB peripheral area is 512 kB in size and is divided to allow for up to 32 peripherals. Each peripheral of either type is allocated 16 kB of space. This allows simplifying the address decoding for each peripheral.

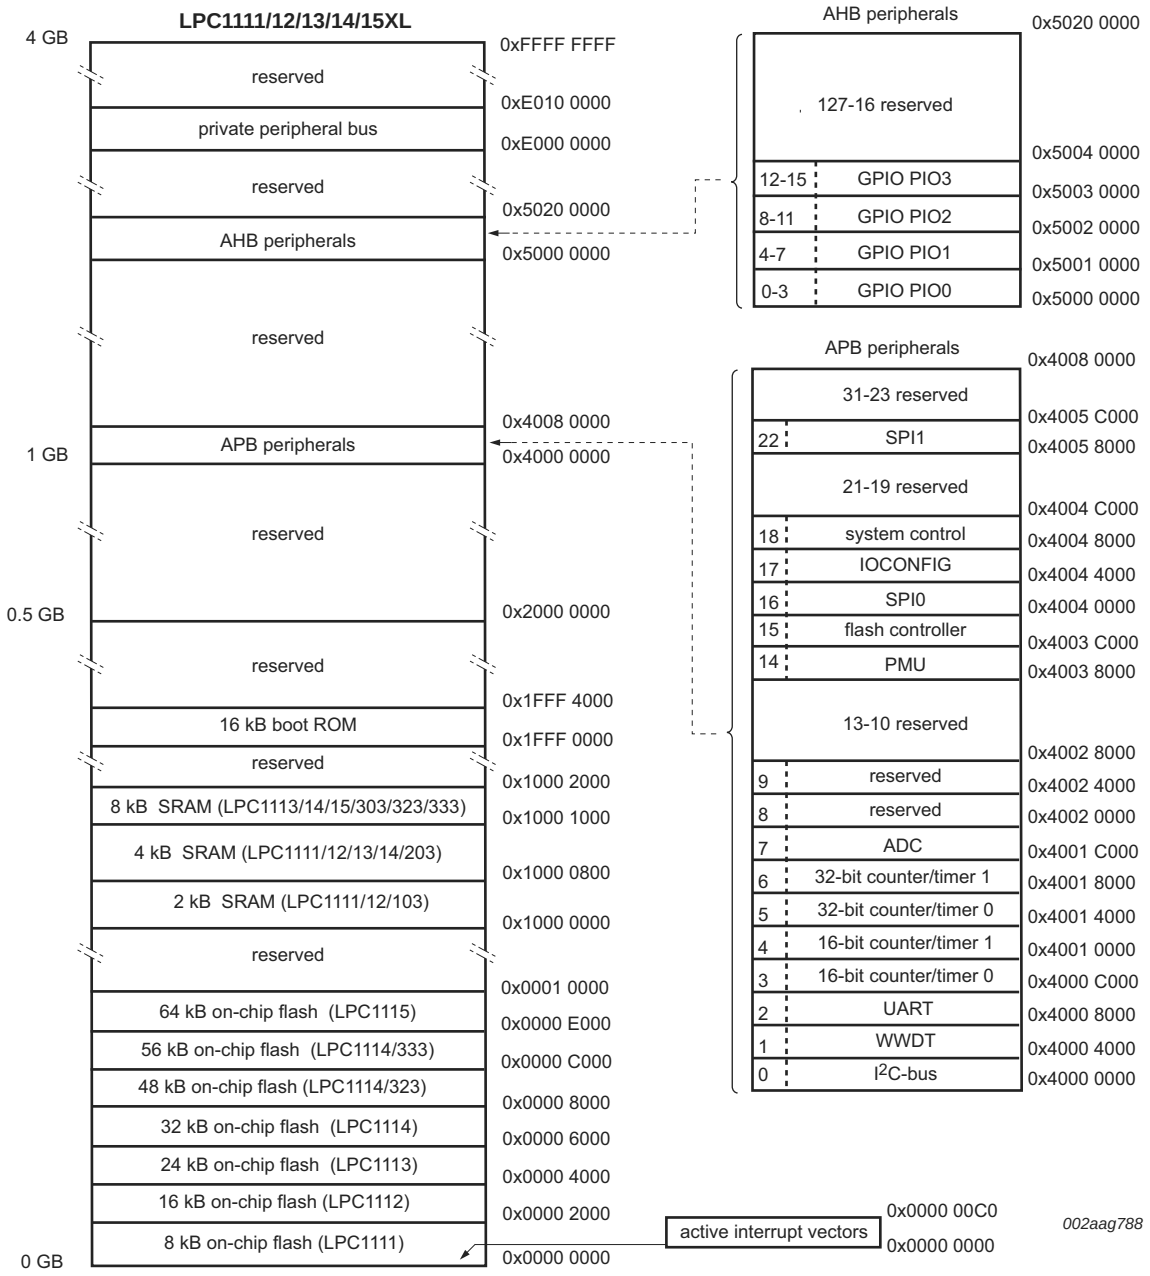

Fig 15. LPC1100XL series memory map

7.5 Nested Vectored Interrupt Controller (NVIC)

The Nested Vectored Interrupt Controller (NVIC) is an integral part of the Cortex-M0. The tight coupling to the CPU allows for low interrupt latency and efficient processing of late arriving interrupts.

7.5.1 Features

- Controls system exceptions and peripheral interrupts.

- In the LPC1110/11/12/13/14/15, the NVIC supports 32 vectored interrupts including up to 13 inputs to the start logic from individual GPIO pins.
- Four programmable interrupt priority levels with hardware priority level masking.
- Software interrupt generation.

7.5.2 Interrupt sources

Each peripheral device has one interrupt line connected to the NVIC but may have several interrupt flags. Individual interrupt flags may also represent more than one interrupt source.

Any GPIO pin (total of up to 42 pins) regardless of the selected function, can be programmed to generate an interrupt on a level, or rising edge or falling edge, or both.

7.6 IOCONFIG block

The IOCONFIG block allows selected pins of the microcontroller to have more than one function. Configuration registers control the multiplexers to allow connection between the pin and the on-chip peripherals.

Peripherals should be connected to the appropriate pins prior to being activated and prior to any related interrupt(s) being enabled. Activity of any enabled peripheral function that is not mapped to a related pin should be considered undefined.

7.7 Fast general purpose parallel I/O

Device pins that are not connected to a specific peripheral function are controlled by the GPIO registers. Pins may be dynamically configured as inputs or outputs. Multiple outputs can be set or cleared in one write operation.

LPC1110/11/12/13/14/15 use accelerated GPIO functions:

- GPIO registers are a dedicated AHB peripheral so that the fastest possible I/O timing can be achieved.
- Entire port value can be written in one instruction.

Additionally, any GPIO pin (total of up to 42 pins) providing a digital function can be programmed to generate an interrupt on a level, a rising or falling edge, or both.

7.7.1 Features

- Bit level port registers allow a single instruction to set or clear any number of bits in one write operation.
- Direction control of individual bits.
- All I/O default to inputs with pull-ups enabled after reset with the exception of the I^2C-bus pins PIO0_4 and PIO0_5.
- Pull-up/pull-down resistor configuration can be programmed through the IOCONFIG block for each GPIO pin (except for pins PIO0_4 and PIO0_5).
- On the LPC1100, all GPIO pins (except PIO0_4 and PIO0_5) are pulled up to 2.6 V (V_{DD} = 3.3 V) if their pull-up resistor is enabled in the IOCONFIG block.

- Enabled by software but requires a hardware reset or a watchdog reset/interrupt to be disabled.
- Incorrect/Incomplete feed sequence causes reset/interrupt if enabled.
- Flag to indicate watchdog reset.
- Programmable 24-bit timer with internal prescaler.
- Selectable time period from ($T_{cy(WDCLK)} \times 256 \times 4$) to ($T_{cy(WDCLK)} \times 2^{24} \times 4$) in multiples of $T_{cy(WDCLK)} \times 4$.
- The Watchdog Clock (WDCLK) source can be selected from the Internal RC oscillator (IRC), the Watchdog oscillator, or the main clock. This gives a wide range of potential timing choices of Watchdog operation under different power reduction conditions. It also provides the ability to run the WDT from an entirely internal source that is not dependent on an external crystal and its associated components and wiring for increased reliability.

7.15 Windowed WatchDog Timer (LPC1100L and LPC1100XL series)

Remark: The windowed watchdog timer is available on the LPC1100L and LPC1100XL series only.

The purpose of the watchdog is to reset the controller if software fails to periodically service it within a programmable time window.

7.15.1 Features

- Internally resets chip if not periodically reloaded during the programmable time-out period.
- Optional windowed operation requires reload to occur between a minimum and maximum time period, both programmable.
- Optional warning interrupt can be generated at a programmable time prior to watchdog time-out.
- Enabled by software but requires a hardware reset or a watchdog reset/interrupt to be disabled.
- Incorrect feed sequence causes reset or interrupt if enabled.
- Flag to indicate watchdog reset.
- Programmable 24-bit timer with internal prescaler.
- Selectable time period from ($T_{cy(WDCLK)} \times 256 \times 4$) to ($T_{cy(WDCLK)} \times 2^{24} \times 4$) in multiples of $T_{cy(WDCLK)} \times 4$.
- The Watchdog Clock (WDCLK) source can be selected from the IRC or the dedicated watchdog oscillator (WDO). This gives a wide range of potential timing choices of watchdog operation under different power conditions.

7.16 Clocking and power control

7.16.1 Crystal oscillators

The LPC1110/11/12/13/14/15 include three independent oscillators. These are the system oscillator, the Internal RC oscillator (IRC), and the Watchdog oscillator. Each oscillator can be used for more than one purpose as required in a particular application.

The start logic must be configured in the system configuration block and in the NVIC before being used.

7.17.2 Reset

Reset has four sources on the LPC1110/11/12/13/14/15: the $\overline{\text{RESET}}$ pin, the Watchdog reset, Power-On Reset (POR), and the BrownOut Detection (BOD) circuit. The $\overline{\text{RESET}}$ pin is a Schmitt trigger input pin. Assertion of chip reset by any source, once the operating voltage attains a usable level, starts the IRC and initializes the flash controller.

A LOW-going pulse as short as 50 ns resets the part.

When the internal Reset is removed, the processor begins executing at address 0, which is initially the Reset vector mapped from the boot block. At that point, all of the processor and peripheral registers have been initialized to predetermined values.

An external pull-up resistor is required on the $\overline{\text{RESET}}$ pin if Deep power-down mode is used.

7.17.3 Brownout detection

The LPC1110/11/12/13/14/15 includes up to four levels for monitoring the voltage on the V_{DD} pin. If this voltage falls below one of the selected levels, the BOD asserts an interrupt signal to the NVIC. This signal can be enabled for interrupt in the Interrupt Enable Register in the NVIC in order to cause a CPU interrupt; if not, software can monitor the signal by reading a dedicated status register. Four threshold levels can be selected to cause a forced reset of the chip.

7.17.4 Code security (Code Read Protection - CRP)

This feature of the LPC1110/11/12/13/14/15 allows user to enable different levels of security in the system so that access to the on-chip flash and use of the Serial Wire Debugger (SWD) and In-System Programming (ISP) can be restricted. When needed, CRP is invoked by programming a specific pattern into a dedicated flash location. IAP commands are not affected by the CRP.

In addition, ISP entry via the PIO0_1 pin can be disabled without enabling CRP. For details see the *LPC111x user manual*.

There are three levels of Code Read Protection:

1. CRP1 disables access to the chip via the SWD and allows partial flash update (excluding flash sector 0) using a limited set of the ISP commands. This mode is useful when CRP is required and flash field updates are needed but all sectors can not be erased.
2. CRP2 disables access to the chip via the SWD and only allows full flash erase and update using a reduced set of the ISP commands.
3. Running an application with level CRP3 selected fully disables any access to the chip via the SWD pins and the ISP. This mode effectively disables ISP override using PIO0_1 pin, too. It is up to the user's application to provide (if needed) flash update mechanism using IAP calls or call reinvoke ISP command to enable flash update via the UART.

9. Thermal characteristics

The average chip junction temperature, T_j (°C), can be calculated using the following equation:

$$T_j = T_{amb} + (P_D \times R_{th(j-a)}) \quad (1)$$

- T_{amb} = ambient temperature (°C),
- $R_{th(j-a)}$ = the package junction-to-ambient thermal resistance (°C/W)
- P_D = sum of internal and I/O power dissipation

The internal power dissipation is the product of I_{DD} and V_{DD}. The I/O power dissipation of the I/O pins is often small and many times can be negligible. However it can be significant in some applications.

Table 13. Thermal characteristics

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$T_{j(max)}$	maximum junction temperature		-	-	125	°C

Table 14. LPC111x/x01 Thermal resistance value (°C/W): ±15 %
