Embedded - Microcontrollers - Application Specific: Tailored Solutions for Precision and Performance

Embedded - Microcontrollers - Application Specific represents a category of microcontrollers designed with unique features and capabilities tailored to specific application needs. Unlike general-purpose microcontrollers, application-specific microcontrollers are optimized for particular tasks, offering enhanced performance, efficiency, and functionality to meet the demands of specialized applications.

What Are Embedded - Microcontrollers - Application Specific?

Application specific microcontrollers are engineered to

Details

Product Status	Obsolete
Applications	USB Type C
Core Processor	ARM® Cortex®-M0
Program Memory Type	FLASH (32KB)
Controller Series	-
RAM Size	4K x 8
Interface	I ² C, SPI, UART/USART, USB
Number of I/O	31
Voltage - Supply	1.71V ~ 5.5V
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	35-UFBGA, WLCSP
Supplier Device Package	35-WLCSP (3.23x2.10)
Purchase URL	https://www.e-xfl.com/product-detail/flip-electronics/cypd1103-35fnxit

Functional Definition

CPU and Memory Subsystem

CPU

The Cortex-M0 CPU in the CCG1 is part of the 32-bit MCU subsystem, which is optimized for low-power operation with extensive clock gating. It mostly uses 16-bit instructions and executes a subset of the Thumb-2 instruction set. This enables fully compatible binary upward migration of the code to higher performance processors such as the Cortex-M3 and M4, thus enabling upward compatibility. The Cypress implementation includes a hardware multiplier that provides a 32-bit result in one cycle. It includes a nested vectored interrupt controller (NVIC) block with 32 interrupt inputs and a Wakeup Interrupt Controller (WIC). The WIC can wake the processor up from the Deep Sleep mode, allowing power to be switched off to the main processor when the chip is in the Deep Sleep mode. The Cortex-M0 CPU provides a Non-Maskable Interrupt (NMI) input, which is made available to the user when it is not in use for system functions requested by the user.

The CPU also includes a debug interface, the serial wire debug (SWD) interface, which is a 2-wire form of JTAG; the debug configuration used for CCG1 has four break-point (address) comparators and two watchpoint (data) comparators.

Flash

The CCG1 device has a flash module with a flash accelerator, tightly coupled to the CPU to improve average access times from the flash block. The flash block is designed to deliver 1 wait-state (WS) access time at 48 MHz and 0-WS access time at 24 MHz. The flash accelerator delivers 85% of single-cycle SRAM access performance on average. Part of the flash module can be used to emulate EEPROM operation if required.

SRAM

A supervisory ROM that contains boot and configuration routines is provided.

System Resources

Power System

The power system is described in detail in the section [Power on page 11](#). It provides assurance that voltage levels are as required for each respective mode and either delay mode entry (on power-on reset (POR), for example) until voltage levels are as required for proper function or generate resets (Brown-Out Detect (BOD)) or interrupts (Low Voltage Detect (LVD)). The CCG1 operates with a single external supply over the range of 3.2 V to 5.5 V operation and has three different power modes: Active, Sleep, and Deep Sleep; transitions between modes are managed by the power system.

Serial Communication Blocks (SCB)

The CCG1 has one SCB, which can implement an I²C interface. The hardware I²C block implements a full multi-master and slave interface (it is capable of multimaster arbitration). This block is capable of operating at speeds of up to 1 Mbps (Fast Mode Plus) and has flexible buffering options to reduce interrupt overhead and latency for the CPU. It also supports EZ-I²C that creates a mailbox address range in the memory of the CCG1 and effectively reduces I²C communication to reading from and writing to an array in memory. In addition, the block supports an 8-deep

FIFO for receive and transmit which, by increasing the time given for the CPU to read data, greatly reduces the need for clock stretching caused by the CPU not having read data on time.

The I²C peripheral is compatible with the I²C Standard-mode, Fast-mode, and Fast-mode Plus devices, as defined in the NXP I²C-bus specification and user manual (UM10204). The I²C bus I/O is implemented with GPIO in open-drain modes.

The CCG1 is not completely compliant with the I²C spec in the following respects:

- GPIO cells are not overvoltage tolerant and, therefore, cannot be hot-swapped or powered up independently of the rest of the I²C system.
- Fast-mode Plus has an I_{OL} specification of 20 mA at a V_{OL} of 0.4 V. The GPIO cells can sink a maximum of 8 mA I_{OL} with a V_{OL} maximum of 0.6 V.
- Fast-mode and Fast-mode Plus specify minimum Fall times, which are not met with the GPIO cell; Slow strong mode can help meet this spec depending on the Bus Load.
- When the SCB is an I²C Master, it interposes an IDLE state between NACK and Repeated Start; the I²C spec defines Bus free as following a Stop condition so other Active Masters do not intervene but a Master that has just become activated may start an Arbitration cycle.
- When the SCB is in the I²C Slave mode, and Address Match on External Clock is enabled (EC_AM = 1) along with operation in the internally clocked mode (EC_OP = 0), then its I²C address must be even.

GPIO

The CCG1 has up to 30 GPIOs, which are configured for various functions. Refer to the pinout tables for the definitions. The GPIO block implements the following:

- Eight drive strength modes:
 - Analog input mode (input and output buffers disabled)
 - Input only
 - Weak pull-up with strong pull-down
 - Strong pull-up with weak pull-down
 - Open drain with strong pull-down
 - Open drain with strong pull-up
 - Strong pull-up with strong pull-down
 - Weak pull-up with weak pull-down
- Input threshold select (CMOS or LVTTL).
- Individual control of input and output buffer enabling/disabling in addition to the drive strength modes.
- Hold mode for latching previous state (used for retaining I/O state in Deep Sleep mode).
- Selectable slew rates for dV/dt related noise control to improve EMI.

During power-on and reset, the I/O pins are forced to the disable state so as not to crowbar any inputs and/or cause excess turn-on current. A multiplexing network, known as a high-speed I/O matrix, is used to multiplex between various signals that may connect to an I/O pin.

Table 2 provides the pin definitions for 40-pin QFN and 35-ball WLCSP for the notebook, tablet, smartphone, and monitor applications. Refer to Table 23 on page 23 for part numbers to package mapping.

Table 2. Pin Definitions for 40-QFN and 35-ball WLCSP for Notebook, Tablet, SmartPhone and Monitor Applications

Functional Pins	CYPD 1122-40LQXI Pins ^[8]	CYPD 1121-40LQXI Pins ^[9]	CYPD 1131-35FNXIT Balls ^[10]	Type	Description

Power

The following power system diagram shows the minimum set of power supply pins as implemented for the CCG1. The system has one regulator in Active mode for the digital circuitry. There is no analog regulator; the analog circuits run directly from the VDDA input. There is a separate regulator for the Deep Sleep mode. There is a separate low-noise regulator for the bandgap. The supply voltage range is 3.2 V to 5.5 V with all functions and circuits operating over that range.

VDDA and VDDD must be shorted together; the grounds, VSSA and VSS must also be shorted together. Bypass capacitors must be used from VDDD to ground. The typical practice for systems in this frequency range is to use a capacitor in the 1-μF range in parallel with a smaller capacitor (0.1 μF, for example). Note that these are simply rules of thumb and that, for critical applications, the PCB layout, lead inductance, and the bypass capacitor parasitic should be simulated to design and obtain optimal bypassing.

Refer to Application Diagrams for bypassing schemes.

Device-Level Specifications

All specifications are valid for $-40\text{ }^{\circ}\text{C} \leq T_A \leq 85\text{ }^{\circ}\text{C}$ and $T_J \leq 100\text{ }^{\circ}\text{C}$ for 35-CSP and 40-QFN package options. Specifications are valid for $-40\text{ }^{\circ}\text{C} \leq T_A \leq 105\text{ }^{\circ}\text{C}$ and $T_J \leq 120\text{ }^{\circ}\text{C}$ for 16-SOIC package options. Specifications are valid for 3.2 V to VDD's maximum value, depending on the type of application.

Table 6. DC Specifications

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
SID53	V _{DDD}	Power supply input voltage	3.20	–	5.20	V	Notebook, tablet, monitor and power adapter applications
SID53_A	V _{DDD}	Power supply input voltage	3.20	–	5.50	V	EMCA applications
SID54	V _{CCD}	Output voltage (for core logic)	–	1.80	–	V	–
SID55	C _{EFC}	External regulator voltage bypass	1.00	1.30	1.60	μF	X5R ceramic or better
SID56	C _{EXC}	Power supply decoupling capacitor	–	1.00	–	μF	X5R ceramic or better
Active Mode, V_{DDD} = 3.2 to 5.5 V. Typical values measured at V_{DD} = 3.3 V.							
SID19	I _{DD14}	Execute from flash; CPU at 48 MHz	–	12.80	–	mA	T = 25 °C
SID20	I _{DD15}	Execute from flash; CPU at 48 MHz	–	–	13.80	mA	–
Sleep Mode, V_{DDD} = 3.2 to 5.5 V							
SID25A	I _{DD20A}	I ² C wakeup and comparators on	–	1.70	2.2 0	mA	–
Deep Sleep Mode, V_{DDD} = 3.2 to 3.6 V (Regulator on)							
SID31	I _{DD26}	I ² C wakeup on	–	1.30	–	μA	T = 25 °C, 3.6 V
SID32	I _{DD27}	I ² C wakeup on	–	–	50.00	μA	T = 85 °C
Deep Sleep Mode, V_{DDD} = 3.6 to 5.5 V							
SID34	I _{DD29}	I ² C wakeup	–	15.00	–	μA	T = 25 °C, 5 V
XRES Current							
SID307	I _{DD_XR}	Supply current while XRES asserted	–	2.00	5.00	mA	–

Note

11. Usage above the absolute maximum conditions listed in Table 5 may cause permanent damage to the device. Exposure to absolute maximum conditions for extended periods of time may affect device reliability. The maximum storage temperature is 150 °C in compliance with JEDEC Standard JESD22-A103, High Temperature Storage Life. When used below absolute maximum conditions but above normal operating conditions, the device may not operate to specification.

Table 7. AC Specifications

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
SID48	F _{CPU}	CPU frequency	DC	–	48.00	MHz	3.2 ≤ V _{DD} ≤ 5.5

Internal Main Oscillator

Table 19. IMO DC Specifications

(Guaranteed by Design)

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID218	I _{IMO1}	IMO operating current at 48 MHz	–	–	1000.00	μA	–

Table 20. IMO AC Specifications

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID223	F _{IMOTOL1}	Frequency variation	–	–	±2.00	%	With API-called calibration
SID226	T _{STARTIMO}	IMO startup time	–	–	12.00	μs	–
SID229	T _{JITRMSIMO3}	RMS Jitter at 48 MHz	–	139.00	–	ps	–

[illegible]

VBUS	VSEL1	VSEL2
5V	0	0
12V	0	1
19.6V	1	0
0V	1	1

Ordering Information

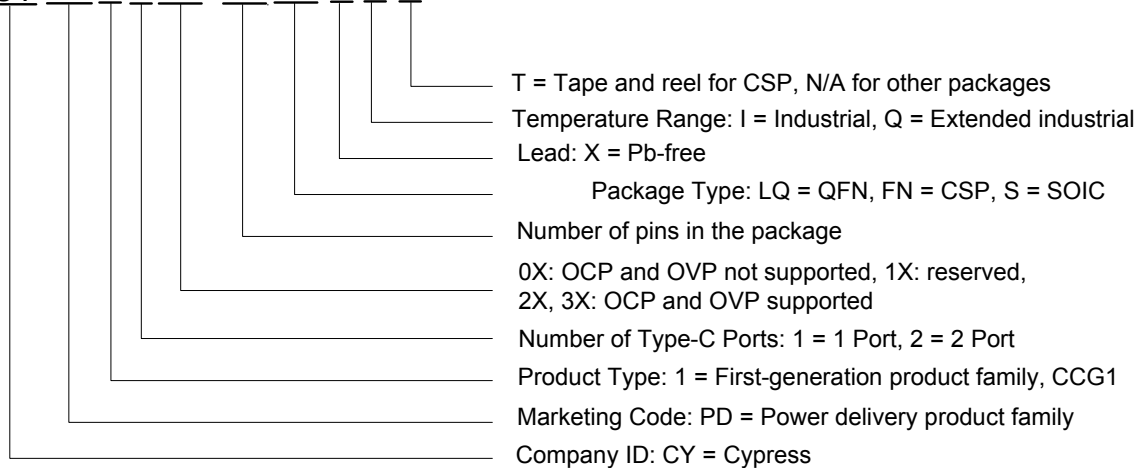

The CCG1 part numbers and features are listed in the following table.

Table 23. CCG1 Ordering Information

Part Number ^[15]	Application	Type-C Ports ^[16]	Overcurrent Protection	Overvoltage Protection	Termination Resistor ^[17]	Role ^[18]	Package	Si ID
CYPD1103-35FNXIT	Cable, EMCA	1	No	No	$R_a^{[19]}$	Cable	35-WLCSP ^[20]	0490
CYPD1131-35FNXIT	Notebook, Tablet, Smartphone	1	Yes	Yes	$R_p^{[23]}, R_d^{[21]}$	DRP ^[24]	35-WLCSP ^[22]	0491
CYPD1121-40LQXI	Monitor	1	Yes	Yes	$R_p^{[23]}, R_d^{[21]}$	DRP ^[24]	40-QFN	0489
CYPD1122-40LQXI	Notebook	1	Yes	Yes	$R_p^{[23]}, R_d^{[21]}$	DRP ^[24]	40-QFN	048A
CYPD1134-40LQXI	Notebook, Desktop	1	Yes	Yes	$R_p^{[23]}$	DFP	40-QFN	048B
CYPD1132-16SXI	Power Adapter	1	Yes	Yes	$R_p^{[23]}$	DFP	16-SOIC	0498
CYPD1132-16SXQ	Power Adapter	1	Yes	Yes	$R_p^{[23]}$	DFP	16-SOIC	0498

Ordering Code Definitions

CY PD X X XX- XX XX X X X

Notes

15. All part numbers support: Input voltage range from 3.2 V to 5.5 V. Industrial parts support -40 °C to +85 °C, Extended Industrial parts support -40 °C to 105 °C.
16. Number of USB Type-C Ports supported.
17. Default V_{CONN} termination.
18. PD Role.
19. Type-C Cable Termination.
20. 35-WLCSP #1 pinout.
21. USB Device Termination.
22. 35-WLCSP #2 pinout.
23. USB Host Termination.
24. Dual Role Port.

The image displays three orthographic views of a microelectronic component, likely a package or substrate, with dimensions in millimeters.

TOP VIEW: Shows a square footprint with overall dimensions of 6.00 ± 0.10 mm by 6.00 ± 0.10 mm. The top edge is divided into segments of 40 and 31. The right edge is divided into segments of 30 and 21. The bottom edge is divided into segments of 11 and 20. A circular feature is labeled "PIN 1 DOT".

SIDE VIEW: Shows the profile of the component. A flatness tolerance of 0.08 is indicated on the top surface. The maximum thickness of the component is 0.05 mm, and the maximum height of the pins is 0.60 mm.

BOTTOM VIEW: Shows the underside of the component. The overall dimensions are 4.60 ± 0.10 mm by 4.60 ± 0.10 mm. The top edge is divided into segments of 31 and 40. The right edge is divided into segments of 1, 0.50, 0.25 $+0.05/-0.07$, 10, and 0.40. The bottom edge is divided into segments of 20 and 11. A central area is labeled "SEE NOTE 1". A pin is labeled "PIN # 1 ID".

Acronyms

Table 27. Acronyms Used in this Document

Acronym	Description
ADC	analog-to-digital converter
API	application programming interface
ARM®	advanced RISC machine, a CPU architecture
CC	Configuration Channel
CPU	central processing unit
CRC	cyclic redundancy check, an error-checking protocol
CS	Current Sense
DFP	downstream facing port
DIO	digital input/output, GPIO with only digital capabilities, no analog. See GPIO.
EEPROM	electrically erasable programmable read-only memory
EMI	electromagnetic interference
ESD	electrostatic discharge
FPB	flash patch and breakpoint
FS	full-speed
GPIO	general-purpose input/output, applies to a PSoC pin
IC	integrated circuit
IDE	integrated development environment
I ² C, or IIC	Inter-Integrated Circuit, a communications protocol
ILO	internal low-speed oscillator, see also IMO
IMO	internal main oscillator, see also ILO
I/O	input/output, see also GPIO, DIO, SIO, USBIO
LVD	low-voltage detect
LVTTTL	low-voltage transistor-transistor logic
MCU	microcontroller unit
NC	no connect
NMI	nonmaskable interrupt
NVIC	nested vectored interrupt controller

Table 27. Acronyms Used in this Document *(continued)*

Acronym	Description
opamp	operational amplifier
OCP	Overcurrent protection
OVP	Overvoltage protection
PCB	printed circuit board
PGA	programmable gain amplifier
PHY	physical layer
POR	power-on reset
PRES	precise power-on reset
PSoC®	Programmable System-on-Chip™
PWM	pulse-width modulator
RAM	random-access memory
RISC	reduced-instruction-set computing
RMS	root-mean-square
RTC	real-time clock
RX	receive
SAR	successive approximation register
SCL	I ² C serial clock
SDA	I ² C serial data
S/H	sample and hold
SPI	Serial Peripheral Interface, a communications protocol
SRAM	static random access memory
SWD	serial wire debug, a test protocol
TX	transmit
UART	Universal Asynchronous Transmitter Receiver, a communications protocol
UFP	upstream facing port
USB	Universal Serial Bus
USBIO	USB input/output, PSoC pins used to connect to a USB port
XRES	external reset I/O pin

Document Conventions

Units of Measure

Table 28. Units of Measure

Symbol	Unit of Measure
°C	degrees Celsius
Hz	hertz
KB	1024 bytes
kHz	kilohertz
kΩ	kilo ohm
Mbps	megabits per second
MHz	megahertz
MΩ	mega-ohm
Msps	megasamples per second
μA	microampere
μF	microfarad
μs	microsecond
μV	microvolt
μW	microwatt
mA	milliampere
ms	millisecond
mV	millivolt
nA	nanoampere
ns	nanosecond
Ω	ohm
pF	picofarad
ppm	parts per million
ps	picosecond
s	second
sps	samples per second
V	volt

Revision History

Description Title: CCG1 Datasheet USB Type-C Port Controller with Power Delivery Document Number: 001-93639				
Revision	ECN	Orig. of Change	Submission Date	Description of Change
**	4520316	MSMI	09/30/2014	New datasheet
*A	4531795	SJH	10/13/2014	Updated Functional Definition . Updated Figure 8, Figure , Figure 7 , Figure , Figure 14, Figure 9 . Added Figure 11 . Updated Pinouts . Updated Power . Updated Figure , Figure 8. Updated Ordering Information Added Note 24 and referred the same note in 40-pin QFN corresponding to CYPD1122-40LQXI. Added Note 27 and referred the same note in 40-pin QFN corresponding to CYPD1134-40LQXI.
*B	4569912	SJH	11/21/2014	Updated Features . Added 16-pin SOIC related information. Updated Functional Definition . Updated Pin Definitions . Added Table 2. Updated Pinouts . Updated Figure 2 , Figure 5 . Added Figure 4 . Updated Power . Updated Figure , Figure 8. Added Figure 6. Updated Electrical Specifications . Updated Device-Level Specifications . Updated Memory . Added Note 14 and referred the same note in F _{RET} parameter. Added details corresponding to spec ID SID182B under F _{RET} parameter. Updated Figure 14, Figure 9 , Figure 11 . Added Figure 8 and Figure 10 . Updated Ordering Information . Updated part numbers. Added a column "Si ID". Updated Packaging . Updated Table 24 . Updated details in maximum value column corresponding to T _A and T _J parameters. Added 16-pin SOIC related information. Updated Table 25 .
*C	4596141	SJH	12/14/2014	Updated Figure 6, Figure 14, Figure 16. Updated Table 8 , Table 23 .
*D	4646123	SJH	02/04/2015	Updated pin definitions for 40-pin QFN and 35-ball WLCSP. Updated Pinout for CYPD1122-40LQXI/CYPD1121-40LQXI and Ordering Information . Updated conditions for Device-Level Specifications . Updated diagrams in Applications in Detail section.
*E	4686050	VGT	03/13/2015	Removed information about 28-pin SSOP. Updated Table 3 , Table 23 , Table 24 , Table 25 , Table 26 , Table 27 . Updated Figure 2 , Figure .
*F	4747272	VGT	05/13/2015	Updated General Description . Added Note 1 and referenced it in Features . Updated Figure 6 , Figure 8 through Figure 11 . Removed Figure 9. Single Chip/Cable, Component Count = 13. Removed Figure 11. Two Chip/Cable, Component Count = 11/paddle.

Revision History *(continued)*

Description Title: CCG1 Datasheet USB Type-C Port Controller with Power Delivery Document Number: 001-93639				
Revision	ECN	Orig. of Change	Submission Date	Description of Change
*G	4800534	VGT	07/02/2015	Updated Low-Power Operation . Updated the number of GPIOs to “up to 30” in GPIO . Updated “1.8 to 5.5 V” to “3.2 V to 5.5 V” in Low-Power Operation , Power System , Power , Device-Level Specifications and Note 15 . Updated Table 2 , Table 4 , Table 5 , Table 6 , Table 7 , Table 8 , Table 14 and Table 18 . Added table footnotes 8 , 9 and 10 . Deleted footnotes 25 through 28. Updated Figure 2 and Figure 8 through Figure 11 . Added Figure 3 . Updated the following in Power : Removed Figures 5 through 8. Updated the section.
*H	4939764	VGT	09/29/2015	Removed specs SID241 and 242. Updated 40-pin QFN package to current revision.
*I	5179365	KISB	03/17/2016	Updated max value of I_{I2C1} from 10.50 μ A to 50 μ A. Updated copyright information and sales links at the end of the document.
*J	5459633	VGT	10/03/2016	Added compliance information regarding the USB Specification. Updated copyright notice to include WICED. Added IoT link in Sales , Solutions , and Legal Information .

Notice regarding compliance with Universal Serial Bus specification: Cypress offers firmware and hardware solutions that are certified to comply with the Universal Serial Bus specification, USB Type-C™ Cable and Connector Specification, and other specifications of USB Implementers Forum, Inc (USB-IF). You may use Cypress or third-party software tools, including sample code, to modify the firmware for Cypress USB products. Modification of such firmware could cause the firmware/hardware combination to no longer comply with the relevant USB-IF specification. You are solely responsible for ensuring the compliance of any modifications you make, and you must follow the compliance requirements of USB-IF before using any USB-IF trademarks or logos in connection with any modifications you make. In addition, if Cypress modifies firmware based on your specifications, then you are responsible for ensuring compliance with any desired standard or specifications as if you had made the modification. CYPRESS IS NOT RESPONSIBLE IN THE EVENT THAT YOU MODIFY OR HAVE MODIFIED A CERTIFIED CYPRESS PRODUCT AND SUCH MODIFIED PRODUCT NO LONGER COMPLIES WITH THE RELEVANT USB-IF SPECIFICATIONS.

This document, including any software or firmware included or referenced in this document ("Software"), is owned by Cypress under the intellectual property laws and treaties of the United States and other countries worldwide. Cypress reserves all rights under such laws and treaties and does not, except as specifically stated in this paragraph, grant any license under its patents, copyrights, trademarks, or other intellectual property rights. If the Software is not accompanied by a license agreement and you do not otherwise have a written agreement with Cypress governing the use of the Software, then Cypress hereby grants you under its copyright rights in the Software, a personal, non-exclusive, nontransferable license (without the right to sublicense) (a) for Software provided in source code form, to modify and reproduce the Software solely for use with Cypress hardware products, only internally within your organization, and (b) to distribute the Software in binary code form externally to end users (either directly or indirectly through resellers and distributors), solely for use on Cypress hardware product units. Cypress also grants you a personal, non-exclusive, nontransferable, license (without the right to sublicense) under those claims of Cypress's patents that are infringed by the Software (as provided by Cypress, unmodified) to make, use, distribute, and import the Software solely to the minimum extent that is necessary for you to exercise your rights under the copyright license granted in the previous sentence. Any other use, reproduction, modification, translation, or compilation of the Software is prohibited.

CYPRESS MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS DOCUMENT OR ANY SOFTWARE, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. Cypress reserves the right to make changes to this document without further notice. Cypress does not assume any liability arising out of the application or use of any product or circuit described in this document. Any information provided in this document, including any sample design information or programming code, is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. Cypress products are not designed, intended, or authorized for use as critical components in systems designed or intended for the operation of weapons, weapons systems, nuclear installations, life-support devices or systems, other medical devices or systems (including resuscitation equipment and surgical implants), pollution control or hazardous substances management, or other uses where the failure of the device or system could cause personal injury, death, or property damage ("Unintended Uses"). A critical component is any component of a device or system whose failure to perform can be reasonably expected to cause the failure of the device or system, or to affect its safety or effectiveness. Cypress is not liable, in whole or in part, and Company shall and hereby does release Cypress from any claim, damage, or other liability arising from or related to all Unintended Uses of Cypress products. Company shall indemnify and hold Cypress harmless from and against all claims, costs, damages, and other liabilities, including claims for personal injury or death, arising from or related to any Unintended Uses of Cypress products.
