
Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	ARM® Cortex®-M3
Core Size	32-Bit Single-Core
Speed	72MHz
Connectivity	I²C, Microwire, SPI, SSI, SSP, UART/USART, USB
Peripherals	Brown-out Detect/Reset, POR, WDT
Number of I/O	40
Program Memory Size	32KB (32K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	8K x 8
Voltage - Supply (Vcc/Vdd)	2V ~ 3.6V
Data Converters	A/D 8x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	48-LQFP
Supplier Device Package	48-LQFP (7x7)
Purchase URL	https://www.e-xfl.com/product-detail/nxp-semiconductors/lpc1343fbd48-151

- Unique device serial number for identification.
- Available as 48-pin LQFP package and 33-pin HVQFN package.

3. Applications

- eMetering
- Lighting
- Alarm systems
- White goods

4. Ordering information

6.2 Pin description

Table 3. LPC1313/42/43 LQFP48 pin description table

Symbol	Pin	Start logic input	Type	Reset state [1]	Description
$\overline{\text{RESET}}$/PIO0_0	3[2]	yes	I	I; PU	**$\overline{\text{RESET}}$ —** External reset input with 20 ns glitch filter. A LOW-going pulse as short as 50 ns on this pin resets the device, causing I/O ports and peripherals to take on their default states, and processor execution to begin at address 0.
			I/O	-	**PIO0_0 —** General purpose digital input/output pin with 10 ns glitch filter.
PIO0_1/CLKOUT/ CT32B0_MAT2/ USB_FTOGGLE	4[3]	yes	I/O	I; PU	**PIO0_1 —** General purpose digital input/output pin. A LOW level on this pin during reset starts the ISP command handler or the USB device enumeration (USB on LPC1342/43 only, see description of PIO0_3).
			O	-	**CLKOUT —** Clockout pin.
			O	-	**CT32B0_MAT2 —** Match output 2 for 32-bit timer 0.
			O	-	**USB_FTOGGLE —** USB 1 ms Start-of-Frame signal (LPC1342/43 only).
PIO0_2/SSEL0/ CT16B0_CAP0	10[3]	yes	I/O	I; PU	**PIO0_2 —** General purpose digital input/output pin.
			I/O	-	**SSEL0 —** Slave select for SSP0.
			I	-	**CT16B0_CAP0 —** Capture input 0 for 16-bit timer 0.
PIO0_3/USB_VBUS	14[3]	yes	I/O	I; PU	**PIO0_3 —** General purpose digital input/output pin. LPC1342/43 only: A LOW level on this pin during reset starts the ISP command handler, a HIGH level starts the USB device enumeration.
			I	-	**USB_VBUS —** Monitors the presence of USB bus power (LPC1342/43 only).
PIO0_4/SCL	15[4]	yes	I/O	I; IA	**PIO0_4 —** General purpose digital input/output pin (open-drain).
			I/O	-	**SCL —** I^2C-bus clock input/output (open-drain). High-current sink only if I^2C Fast-mode Plus is selected in the I/O configuration register.
PIO0_5/SDA	16[4]	yes	I/O	I; IA	**PIO0_5 —** General purpose digital input/output pin (open-drain).
			I/O	-	**SDA —** I^2C-bus data input/output (open-drain). High-current sink only if I^2C Fast-mode Plus is selected in the I/O configuration register.
PIO0_6/ $\overline{\text{USB\_CONNECT}}$/ SCK0	22[3]	yes	I/O	I; PU	**PIO0_6 —** General purpose digital input/output pin.
			O	-	**$\overline{\text{USB\_CONNECT}}$ —** Signal used to switch an external 1.5 kΩ resistor under software control. Used with the SoftConnect USB feature (LPC1342/43 only).
			I/O	-	**SCK0 —** Serial clock for SSP0.
PIO0_7/$\overline{\text{CTS}}$	23[3]	yes	I/O	I; PU	**PIO0_7 —** General purpose digital input/output pin (high-current output driver).
			I	-	**$\overline{\text{CTS}}$ —** Clear To Send input for UART.
PIO0_8/MISO0/ CT16B0_MAT0	27[3]	yes	I/O	I; PU	**PIO0_8 —** General purpose digital input/output pin.
			I/O	-	**MISO0 —** Master In Slave Out for SSP0.
			O	-	**CT16B0_MAT0 —** Match output 0 for 16-bit timer 0.

Table 4. LPC1311/13/42/43 HVQFN33 pin description table

Symbol	Pin	Start logic input	Type	Reset state [1]	Description
$\overline{\text{RESET}}$/PIO0_0	2[2]	yes	I	I; PU	**$\overline{\text{RESET}}$ —** External reset input with 20 ns glitch filter. A LOW-going pulse as short as 50 ns on this pin resets the device, causing I/O ports and peripherals to take on their default states, and processor execution to begin at address 0.
			I/O	-	**PIO0_0 —** General purpose digital input/output pin with 10 ns glitch filter.
PIO0_1/CLKOUT/ CT32B0_MAT2/ USB_FTOGGLE	3[3]	yes	I/O	I; PU	**PIO0_1 —** General purpose digital input/output pin. A LOW level on this pin during reset starts the ISP command handler or the USB device enumeration (USB on LPC1342/43 only, see description of PIO0_3).
			O	-	**CLKOUT —** Clock out pin.
			O	-	**CT32B0_MAT2 —** Match output 2 for 32-bit timer 0.
			O	-	**USB_FTOGGLE —** USB 1 ms Start-of-Frame signal (LPC1342/43 only).
PIO0_2/SSEL0/ CT16B0_CAP0	8[3]	yes	I/O	I; PU	**PIO0_2 —** General purpose digital input/output pin.
			I/O	-	**SSEL0 —** Slave select for SSP0.
			I	-	**CT16B0_CAP0 —** Capture input 0 for 16-bit timer 0.
PIO0_3/ USB_VBUS	9[3]	yes	I/O	I; PU	**PIO0_3 —** General purpose digital input/output pin. LPC1342/43 only: A LOW level on this pin during reset starts the ISP command handler, a HIGH level starts the USB device enumeration.
			I	-	**USB_VBUS —** Monitors the presence of USB bus power (LPC1342/43 only).
PIO0_4/SCL	10[4]	yes	I/O	I; IA	**PIO0_4 —** General purpose digital input/output pin (open-drain).
			I/O	-	**SCL —** I^2C-bus clock input/output (open-drain). High-current sink only if I^2C Fast-mode Plus is selected in the I/O configuration register.
PIO0_5/SDA	11[4]	yes	I/O	I; IA	**PIO0_5 —** General purpose digital input/output pin (open-drain).
			I/O	-	**SDA —** I^2C-bus data input/output (open-drain). High-current sink only if I^2C Fast-mode Plus is selected in the I/O configuration register.
PIO0_6/ USB_$\overline{\text{CONNECT}}$/ SCK0	15[3]	yes	I/O	I; PU	**PIO0_6 —** General purpose digital input/output pin.
			O	-	**USB_$\overline{\text{CONNECT}}$ —** Signal used to switch an external 1.5 kΩ resistor under software control. Used with the SoftConnect USB feature (LPC1342/43 only).
			I/O	-	**SCK0 —** Serial clock for SSP0.
PIO0_7/$\overline{\text{CTS}}$	16[3]	yes	I/O	I; PU	**PIO0_7 —** General purpose digital input/output pin (high-current output driver).
			I	-	**$\overline{\text{CTS}}$ —** Clear To Send input for UART.
PIO0_8/MISO0/ CT16B0_MAT0	17[3]	yes	I/O	I; PU	**PIO0_8 —** General purpose digital input/output pin.
			I/O	-	**MISO0 —** Master In Slave Out for SSP0.
			O	-	**CT16B0_MAT0 —** Match output 0 for 16-bit timer 0.
PIO0_9/MOSI0/ CT16B0_MAT1/ SWO	18[3]	yes	I/O	I; PU	**PIO0_9 —** General purpose digital input/output pin.
			I/O	-	**MOSI0 —** Master Out Slave In for SSP0.
			O	-	**CT16B0_MAT1 —** Match output 1 for 16-bit timer 0.
			O	-	**SWO —** Serial wire trace output.

Table 4. LPC1311/13/42/43 HVQFN33 pin description table *…continued*

Symbol	Pin	Start logic input	Type	Reset state [1]	Description
PIO1_7/TXD/ CT32B0_MAT1	32[3]	yes	I/O	I; PU	**PIO1_7 —** General purpose digital input/output pin.
			O	-	**TXD —** Transmitter output for UART.
			O	-	**CT32B0_MAT1 —** Match output 1 for 32-bit timer 0.
PIO1_8/ CT16B1_CAP0	7[3]	yes	I/O	I; PU	**PIO1_8 —** General purpose digital input/output pin.
			I	-	**CT16B1_CAP0 —** Capture input 0 for 16-bit timer 1.
PIO1_9/ CT16B1_MAT0	12[3]	yes	I/O	I; PU	**PIO1_9 —** General purpose digital input/output pin.
			O	-	**CT16B1_MAT0 —** Match output 0 for 16-bit timer 1.
PIO1_10/AD6/ CT16B1_MAT1	20[5]	yes	I/O	I; PU	**PIO1_10 —** General purpose digital input/output pin.
			I	-	**AD6 —** A/D converter, input 6.
			O	-	**CT16B1_MAT1 —** Match output 1 for 16-bit timer 1.
PIO1_11/AD7	27[5]	yes	I/O	I; PU	**PIO1_11 —** General purpose digital input/output pin.
			I	-	**AD7 —** A/D converter, input 7.
PIO2_0/$\overline{\text{DTR}}$	1[3]	yes	I/O	I; PU	**PIO2_0 —** General purpose digital input/output pin.
			O	-	**$\overline{\text{DTR}}$ —** Data Terminal Ready output for UART.
PIO3_2	28[3]	yes	I/O	I; PU	**PIO3_2 —** General purpose digital input/output pin.
PIO3_4	13[3]	no	I/O	I; PU	**PIO3_4 —** General purpose digital input/output pin (LPC1311/13 only).
PIO3_5	14[3]	no	I/O	I; PU	**PIO3_5 —** General purpose digital input/output pin (LPC1311/13 only).
USB_DM	13[6]	no	I/O	F	**USB_DM —** USB bidirectional D− line (LPC1342/43 only).
USB_DP	14[6]	no	I/O	F	**USB_DP —** USB bidirectional D+ line (LPC1342/43 only).
V_{DD}	6; 29	-	I	-	3.3 V supply voltage to the internal regulator, the external rail, and the ADC. Also used as the ADC reference voltage.
XTALIN	4[7]	-	I	-	Input to the oscillator circuit and internal clock generator circuits. Input voltage must not exceed 1.8 V.
XTALOUT	5[7]	-	O	-	Output from the oscillator amplifier.
V_{SS}	33	-	-	-	Thermal pad. Connect to ground.

[1] Pin state at reset for default function: I = Input; O = Output; PU = internal pull-up enabled (for V_{DD} = 3.3 V, pin is pulled up to 2.6 V for parts LPC1311/13/42/43 and pulled up to 3.3 V for parts LPC1311/01 and LPC1313/01); IA = inactive, no pull-up/down enabled. F = floating; floating pins, if not used, should be tied to ground or power to minimize power consumption.

[2] 5 V tolerant pad. See Figure 37 for pad characteristics. $\overline{\text{RESET}}$ functionality is not available in Deep power-down mode. Use the WAKEUP pin to reset the chip and wake up from Deep power-down mode. An external pull-up resistor is required on this pin for the Deep power-down mode.

[3] 5 V tolerant pad providing digital I/O functions with configurable pull-up/pull-down resistors and configurable hysteresis (see Figure 36).

[4] I^2C-bus pads compliant with the I^2C-bus specification for I^2C standard mode and I^2C Fast-mode Plus.

[5] 5 V tolerant pad providing digital I/O functions with configurable pull-up/pull-down resistors, configurable hysteresis, and analog input. When configured as a ADC input, digital section of the pad is disabled, and the pin is not 5 V tolerant (see Figure 36).

[6] Pad provides USB functions. It is designed in accordance with the USB specification, revision 2.0 (Full-speed and Low-speed mode only). This pad is not 5 V tolerant.

[7] When the system oscillator is not used, connect XTALIN and XTALOUT as follows: XTALIN can be left floating or can be grounded (grounding is preferred to reduce susceptibility to noise). XTALOUT should be left floating.

7. Functional description

7.1 Architectural overview

The ARM Cortex-M3 includes three AHB-Lite buses: the system bus, the I-code bus, and the D-code bus (see Figure 1). The I-code and D-code core buses are faster than the system bus and are used similarly to TCM interfaces: one bus dedicated for instruction fetch (I-code) and one bus for data access (D-code). The use of two core buses allows for simultaneous operations if concurrent operations target different devices.

7.2 ARM Cortex-M3 processor

The ARM Cortex-M3 is a general purpose, 32-bit microprocessor, which offers high performance and very low power consumption. The ARM Cortex-M3 offers many new features, including a Thumb-2 instruction set, low interrupt latency, hardware multiply and divide, interruptible/continuable multiple load and store instructions, automatic state save and restore for interrupts, tightly integrated interrupt controller, and multiple core buses capable of simultaneous accesses.

Pipeline techniques are employed so that all parts of the processing and memory systems can operate continuously. Typically, while one instruction is being executed, its successor is being decoded, and a third instruction is being fetched from memory.

The ARM Cortex-M3 processor is described in detail in the *Cortex-M3 Technical Reference Manual* which is available on the official ARM website.

7.3 On-chip flash program memory

The LPC1311/13/42/43 contain 32 kB (LPC1313 and LPC1343), 16 kB (LPC1342), or 8 kB (LPC1311) of on-chip flash memory.

7.4 On-chip SRAM

The LPC1311/13/42/43 contain a total of 8 kB (LPC1343 and LPC1313) or 4 kB (LPC1342 and LPC1311) on-chip static RAM memory.

7.5 Memory map

The LPC1311/13/42/43 incorporate several distinct memory regions. Figure 6 shows the overall map of the entire address space from the user program viewpoint following reset. The interrupt vector area supports address remapping.

The AHB peripheral area is 2 MB in size and is divided to allow for up to 128 peripherals. The APB peripheral area is 512 kB in size and is divided to allow for up to 32 peripherals. Each peripheral of either type is allocated 16 kB of space. This allows simplifying the address decoding for each peripheral.

- On the LPC1311/13/42/43, all GPIO pins (except PIO0_4 and PIO0_5) are pulled up to 2.6 V (V_{DD} = 3.3 V) if their pull-up resistor is enabled in the IOCONFIG block.
- On the LPC1311/01 and LPC1313/01, all GPIO pins (except PIO0_4 and PIO0_5) are pulled up to 3.3 V (V_{DD} = 3.3 V) if their pull-up resistor is enabled in the IOCONFIG block.

7.9 USB interface (LPC1342/43 only)

The Universal Serial Bus (USB) is a 4-wire bus that supports communication between a host and one or more (up to 127) peripherals. The host controller allocates the USB bandwidth to attached devices through a token-based protocol. The bus supports hot-plugging and dynamic configuration of the devices. All transactions are initiated by the host controller.

The LPC1342/43 USB interface is a device controller with on-chip PHY for device functions.

7.9.1 Full-speed USB device controller

The device controller enables 12 Mbit/s data exchange with a USB Host controller. It consists of a register interface, serial interface engine, and endpoint buffer memory. The serial interface engine decodes the USB data stream and writes data to the appropriate endpoint buffer. The status of a completed USB transfer or error condition is indicated via status registers. An interrupt is also generated if enabled.

7.9.1.1 Features

- Dedicated USB PLL available.
- Fully compliant with *USB 2.0 specification (full speed)*.
- Supports 10 physical (5 logical) endpoints with up to 64 bytes buffer RAM per endpoint (see Table 5).
- Supports Control, Bulk, Isochronous, and Interrupt endpoints.
- Supports SoftConnect feature.
- Double buffer implementation for Bulk and Isochronous endpoints.

Table 5. USB device endpoint configuration

Logical endpoint	Physical endpoint	Endpoint type	Direction	Packet size (byte)	Double buffer
0	0	Control	out	64	no
0	1	Control	in	64	no
1	2	Interrupt/Bulk	out	64	no
1	3	Interrupt/Bulk	in	64	no
2	4	Interrupt/Bulk	out	64	no
2	5	Interrupt/Bulk	in	64	no
3	6	Interrupt/Bulk	out	64	yes
3	7	Interrupt/Bulk	in	64	yes
4	8	Isochronous	out	512	yes
4	9	Isochronous	in	512	yes

7.10 UART

The LPC1311/13/42/43 contains one UART.

Support for RS-485/9-bit mode allows both software address detection and automatic address detection using 9-bit mode.

The UART includes a fractional baud rate generator. Standard baud rates such as 115200 Bd can be achieved with any crystal frequency above 2 MHz.

7.10.1 Features

- Maximum UART data bit rate of 4.5 MBit/s.
- 16-byte receive and transmit FIFOs.
- Register locations conform to 16C550 industry standard.
- Receiver FIFO trigger points at 1 B, 4 B, 8 B, and 14 B.
- Built-in fractional baud rate generator covering wide range of baud rates without a need for external crystals of particular values.
- Fractional divider for baud rate control, auto baud capabilities and FIFO control mechanism that enables software flow control implementation.
- Support for RS-485/9-bit mode.
- Support for modem control.

7.11 SSP serial I/O controller

The LPC1311/13/42/43 contain one SSP controller. An additional SSP controller is available on the LPC1313FBD48/01 package.

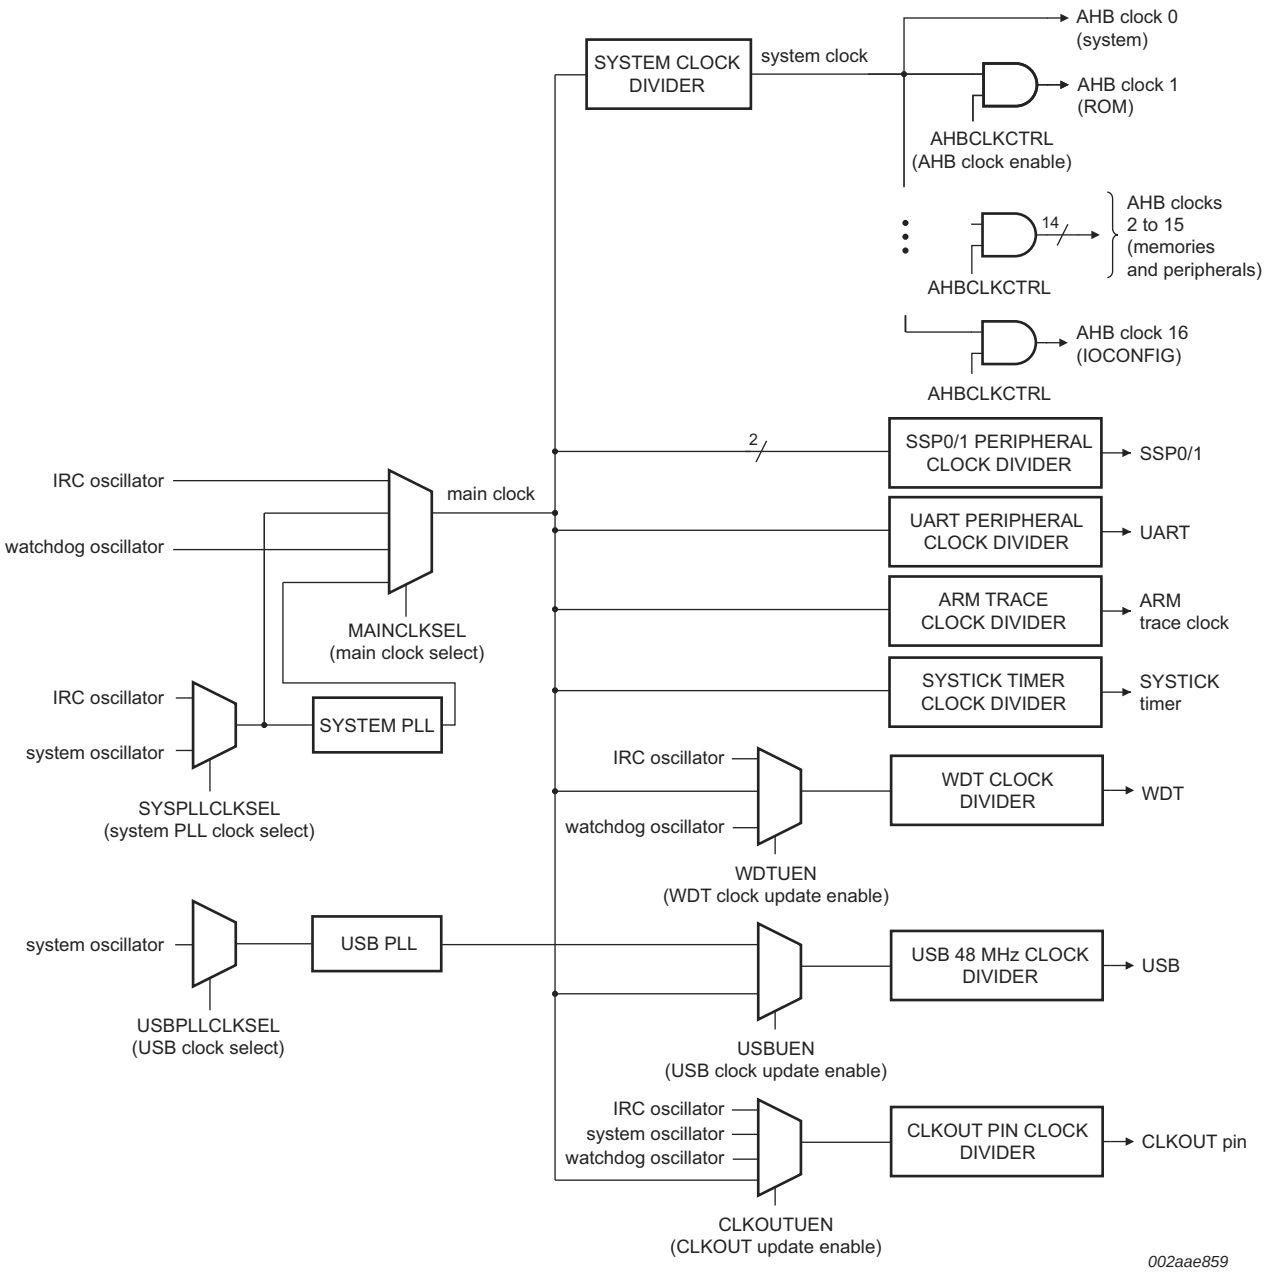
The SSP controller is capable of operation on a SSP, 4-wire SSI, or Microwire bus. It can interact with multiple masters and slaves on the bus. Only a single master and a single slave can communicate on the bus during a given data transfer. The SSP supports full duplex transfers, with frames of 4 bits to 16 bits of data flowing from the master to the slave and from the slave to the master. In practice, often only one of these data flows carries meaningful data.

7.11.1 Features

- Maximum SSP speed of 36 Mbit/s (master) or 6 Mbit/s (slave)
- Compatible with Motorola SPI, 4-wire Texas Instruments SSI, and National Semiconductor Microwire buses
- Synchronous serial communication
- Master or slave operation
- 8-frame FIFOs for both transmit and receive
- 4-bit to 16-bit frame

7.12 I^2C-bus serial I/O controller

The LPC1311/13/42/43 contain one I^2C-bus controller.



The USB clock is available on LPC1342/43 only. SSP1 is available on LPC1313FBD48/01 only.

Fig 7. LPC1311/13/42/43 clocking generation block diagram

7.18.1.1 Internal RC oscillator

The IRC may be used as the clock source for the WDT, and/or as the clock that drives the system PLL and subsequently the CPU. The nominal IRC frequency is 12 MHz. The IRC is trimmed to 1 % accuracy over the entire voltage and temperature range.

7.18.5 Power control

The LPC1311/13/42/43 support a variety of power control features. There are three special modes of processor power reduction: Sleep mode, Deep-sleep mode, and Deep power-down mode. The CPU clock rate may also be controlled as needed by changing clock sources, reconfiguring PLL values, and/or altering the CPU clock divider value. This allows a trade-off of power versus processing speed based on application requirements. In addition, a register is provided for shutting down the clocks to individual on-chip peripherals, allowing fine tuning of power consumption by eliminating all dynamic power use in any peripherals that are not required for the application. Selected peripherals have their own clock divider which provides even better power control.

7.18.5.1 Power profiles (LPC1300L series, LPC1311/01 and LPC1313/01 only)

The power consumption in Active and Sleep modes can be optimized for the application through simple calls to the power profile. The power configuration routine configures the LPC1311/01 and the LPC1313/01 for one of the following power modes:

- Default mode corresponding to power configuration after reset.
- CPU performance mode corresponding to optimized processing capability.
- Efficiency mode corresponding to optimized balance of current consumption and CPU performance.
- Low-current mode corresponding to lowest power consumption.

In addition, the power profile includes routines to select the optimal PLL settings for a given system clock and PLL input clock.

7.18.5.2 Sleep mode

When Sleep mode is entered, the clock to the core is stopped. Resumption from the Sleep mode does not need any special sequence but re-enabling the clock to the ARM core.

In Sleep mode, execution of instructions is suspended until either a reset or interrupt occurs. Peripheral functions continue operation during Sleep mode and may generate interrupts to cause the processor to resume execution. Sleep mode eliminates dynamic power used by the processor itself, memory systems and related controllers, and internal buses.

7.18.5.3 Deep-sleep mode

In Deep-sleep mode, the chip is in Sleep mode, and in addition all analog blocks are shut down. As an exception, the user has the option to keep the watchdog oscillator and the BOD circuit running for self-timed wake-up and BOD protection. Deep-sleep mode allows for additional power savings.

Up to 40 pins total can serve as external wake-up pins to the start logic to wake up the chip from Deep-sleep mode (see Section 7.19.1).

Unless the watchdog oscillator is selected to run in Deep-sleep mode, the clock source should be switched to IRC before entering Deep-sleep mode, because the IRC can be switched on and off glitch-free.

[3] The integral non-linearity ($E_{L(adj)}$) is the peak difference between the center of the steps of the actual and the ideal transfer curve after appropriate adjustment of gain and offset errors. See Figure 8.

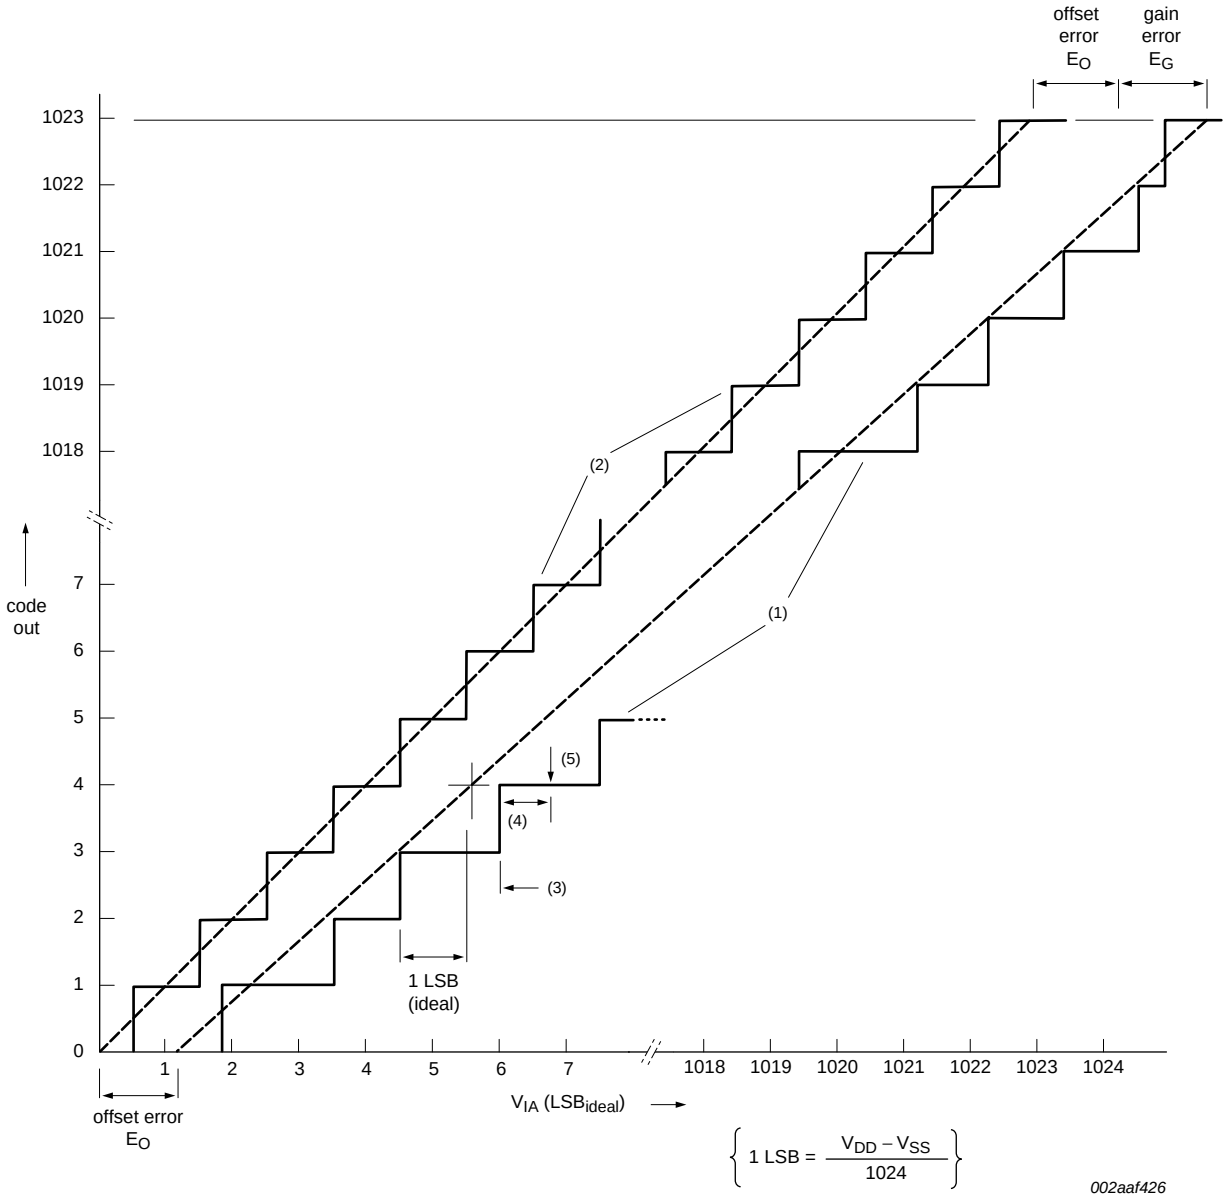
[4] The offset error (E_O) is the absolute difference between the straight line which fits the actual curve and the straight line which fits the ideal curve. See Figure 8.

[5] The gain error (E_G) is the relative difference in percent between the straight line fitting the actual transfer curve after removing offset error, and the straight line which fits the ideal transfer curve. See Figure 8.

[6] The absolute error (E_T) is the maximum difference between the center of the steps of the actual transfer curve of the non-calibrated ADC and the ideal transfer curve. See Figure 8.

[7] T_{amb} = 25 °C; maximum sampling frequency f_s = 400 kSamples/s and analog input capacitance C_{ia} = 1 pF.

[8] Input resistance R_i depends on the sampling frequency f_s: $R_i = 1 / (f_s \times C_{ia})$.



(1) Example of an actual transfer curve.

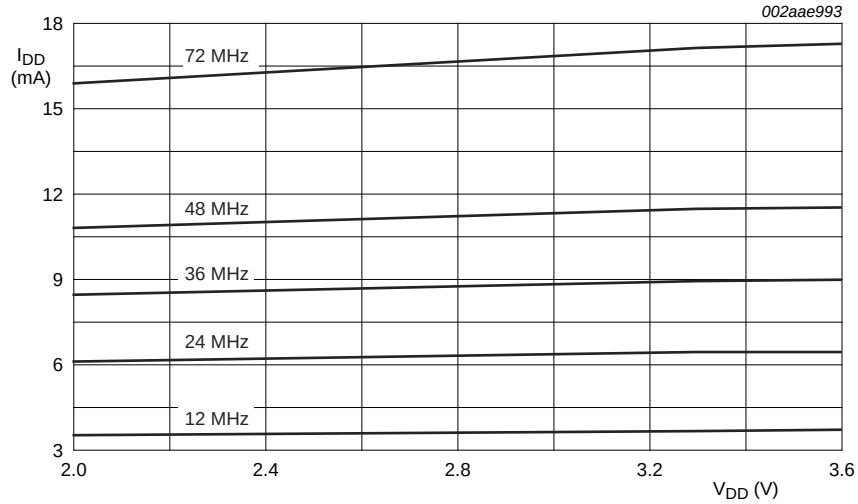
(2) The ideal transfer curve.

(3) Differential linearity error (E_D).

(4) Integral non-linearity ($E_{L(adj)}$).

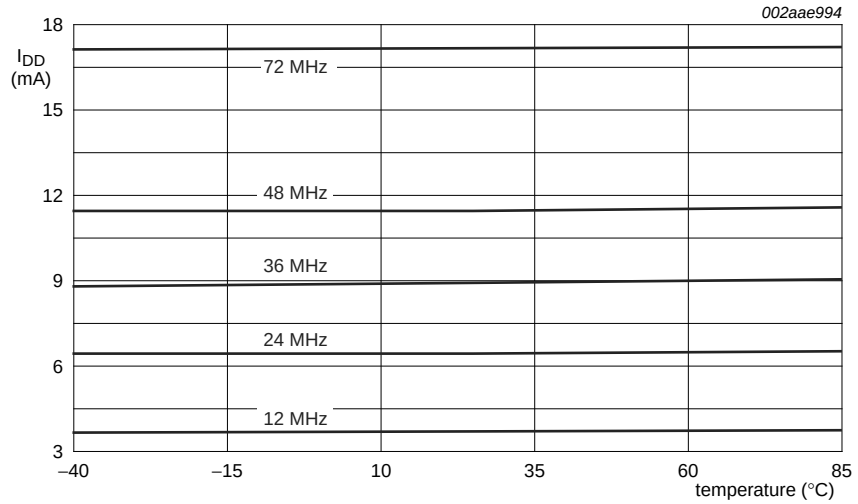
(5) Center of a step of the actual transfer curve.

Fig 8. ADC characteristics



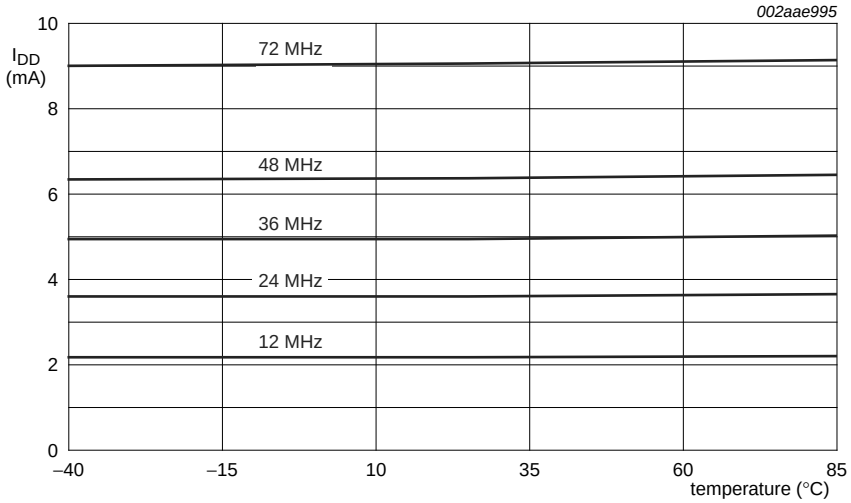
Conditions: T_{amb} = 25 °C; Active mode entered executing code `while(1){}` from flash; internal pull-up resistors disabled; system oscillator and system PLL enabled; IRC, BOD disabled; all peripherals disabled in the SYSAHBCLKCTRL register (SYSAHBCLKCTRL = 0x1F); all peripheral clocks disabled; USB_DP and USB_DM pulled LOW externally (LPC1342/43).

Fig 9. Typical supply current versus regulator supply voltage V_{DD} in Active mode (LPC1311/13/42/43)



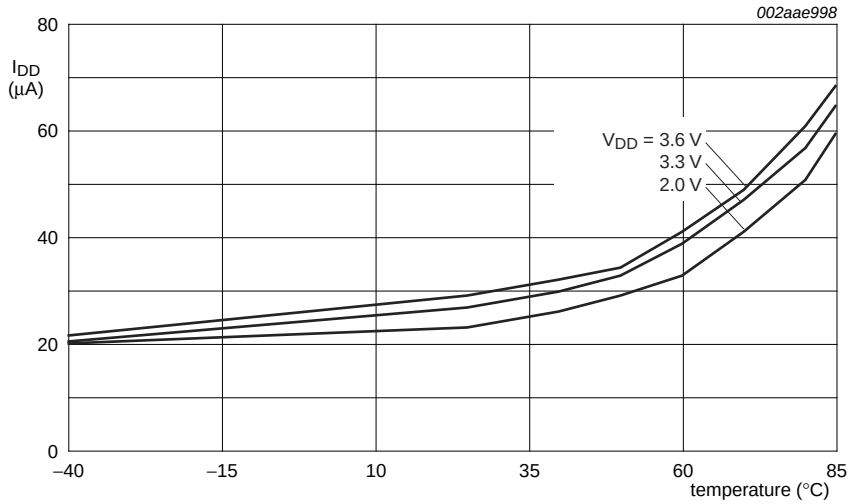
Conditions: V_{DD} = 3.3 V; Active mode entered executing code `while(1){}` from flash; internal pull-up resistors disabled; system oscillator and system PLL enabled; IRC, BOD disabled; all peripherals disabled in the SYSAHBCLKCTRL register (SYSAHBCLKCTRL = 0x1F); all peripheral clocks disabled; USB_DP and USB_DM pulled LOW externally (LPC1342/43).

Fig 10. Typical supply current versus temperature in Active mode (LPC1311/13/42/43)



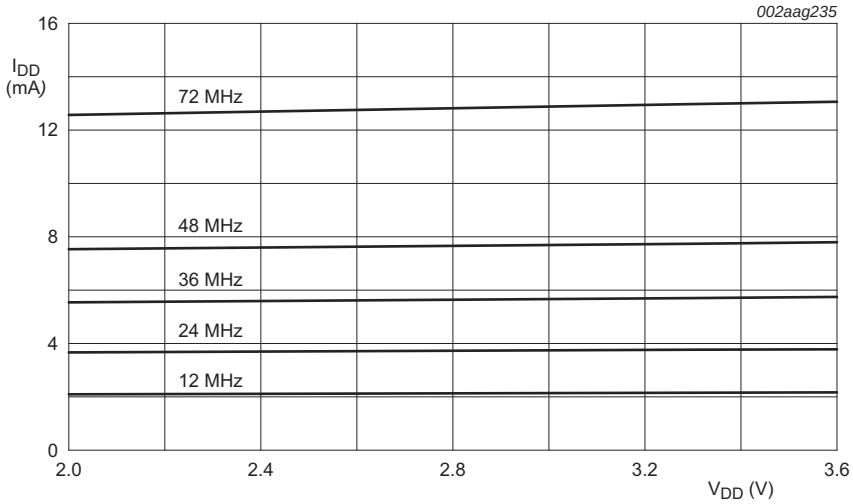
Conditions: V_{DD} = 3.3 V; Sleep mode entered from flash; internal pull-up resistors disabled; system oscillator and system PLL enabled; IRC, BOD disabled; all peripherals disabled in the SYSAHBCLKCTRL register (SYSAHBCLKCTRL = 0x1F); all peripheral clocks disabled; USB_DP and USB_DM pulled LOW externally (LPC1342/43).

Fig 11. Typical supply current versus temperature in Sleep mode (LPC1311/13/42/43)



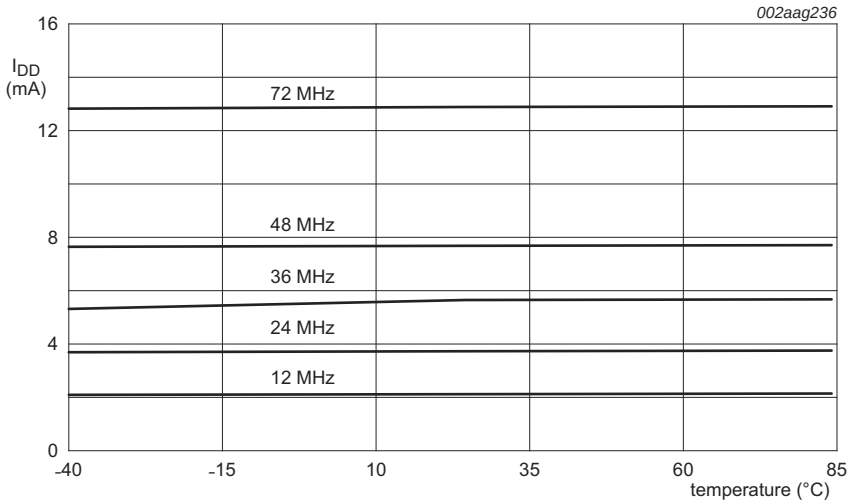
Conditions: BOD disabled; all oscillators and analog blocks turned off in the PDSLEEPCFG register; PDSLEEPCFG = 0x0000 0FFF; USB_DP and USB_DM pulled LOW externally (LPC1342/43).

Fig 12. Typical supply current versus temperature in Deep-sleep mode (analog blocks disabled; LPC1311/13/42/43)



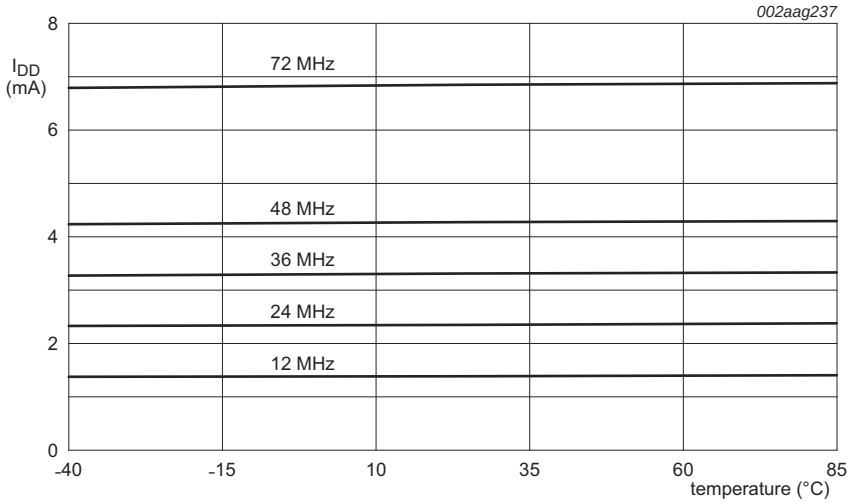
Conditions: T_{amb} = 25 °C; Active mode entered executing code `while(1){}` from flash; internal pull-up resistors disabled; system oscillator and system PLL enabled; IRC, BOD disabled; all peripherals disabled in the SYSAHBCLKCTRL register (SYSAHBCLKCTRL = 0x1F); all peripheral clocks disabled; low-current mode.

Fig 14. Typical supply current versus regulator supply voltage V_{DD} in Active mode (LPC1311/01 and LPC1313/01)



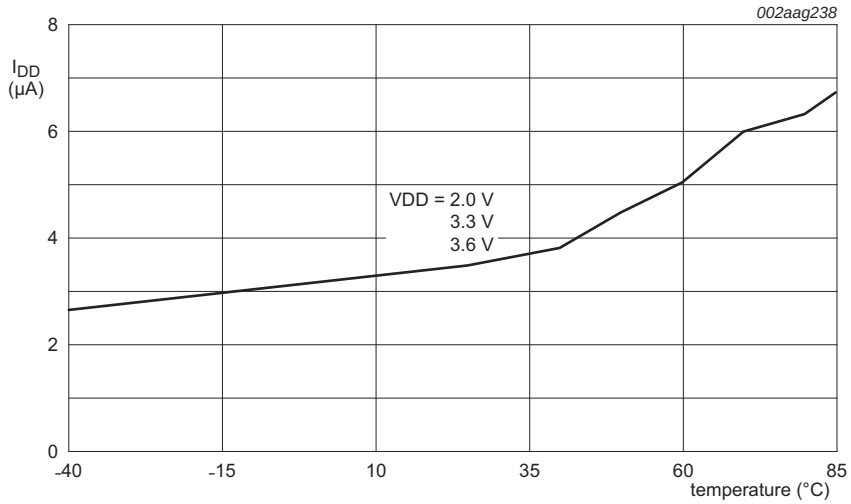
Conditions: V_{DD} = 3.3 V; Active mode entered executing code `while(1){}` from flash; internal pull-up resistors disabled; system oscillator and system PLL enabled; IRC, BOD disabled; all peripherals disabled in the SYSAHBCLKCTRL register (SYSAHBCLKCTRL = 0x1F); all peripheral clocks disabled; low-current mode.

Fig 15. Typical supply current versus temperature in Active mode (LPC1311/01 and LPC1313/01)



Conditions: V_{DD} = 3.3 V; Sleep mode entered from flash; internal pull-up resistors disabled; system oscillator and system PLL enabled; IRC, BOD disabled; all peripherals disabled in the SYSAHBCLKCTRL register (SYSAHBCLKCTRL = 0x1F); all peripheral clocks disabled; low-current mode.

Fig 16. Typical supply current versus temperature in Sleep mode (LPC1311/01 and LPC1313/01)



Conditions: BOD disabled; all oscillators and analog blocks turned off in the PDSLEEPCFG register; PDSLEEPCFG = 0x0000 0FFF.

Fig 17. Typical supply current versus temperature in Deep-sleep mode (analog blocks disabled, LPC1311/01 and LPC1313/01)

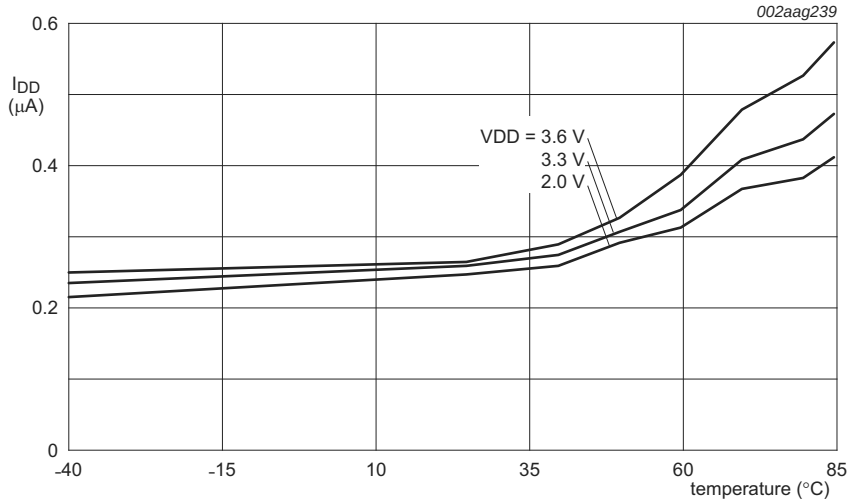


Fig 18. Typical supply current versus temperature in Deep power-down mode (LPC1311/01 and LPC1313/01)

9.5 Peripheral power consumption

The supply current per peripheral is measured as the difference in supply current between the peripheral block enabled and the peripheral block disabled in the SYSAHBCLKCFG or PDRUNCFG (for analog blocks) registers. All other blocks are disabled in both registers and no code is executed. Measured on a typical sample at T_{amb} = 25 °C. Unless noted otherwise, the system oscillator and PLL are running in both measurements.

The supply currents are shown for system clock frequencies of 12 MHz, 48 MHz, and 72 MHz.

Table 11. Power consumption for individual analog and digital blocks

Peripheral	Typical supply current in mA				Notes
	n/a	12 MHz	48 MHz	72 MHz	
IRC	0.23	-	-	-	System oscillator running; PLL off; independent of main clock frequency.
System oscillator at 12 MHz	0.23	-	-	-	IRC running; PLL off; independent of main clock frequency.
Watchdog oscillator at 500 kHz/2	0.002	-	-	-	System oscillator running; PLL off; independent of main clock frequency.
BOD	0.045	-	-	-	Independent of main clock frequency.
Main or USB PLL	-	0.26	0.34	0.48	-
ADC	-	0.07	0.25	0.37	-
CLKOUT	-	0.14	0.56	0.82	Main clock divided by 4 in the CLKOUTDIV register.
CT16B0	-	0.01	0.05	0.08	-
CT16B1	-	0.01	0.04	0.06	-
CT32B0	-	0.01	0.05	0.07	-
CT32B1	-	0.01	0.04	0.06	-

11. Application information

11.1 Suggested USB interface solutions (LPC1342/43 only)

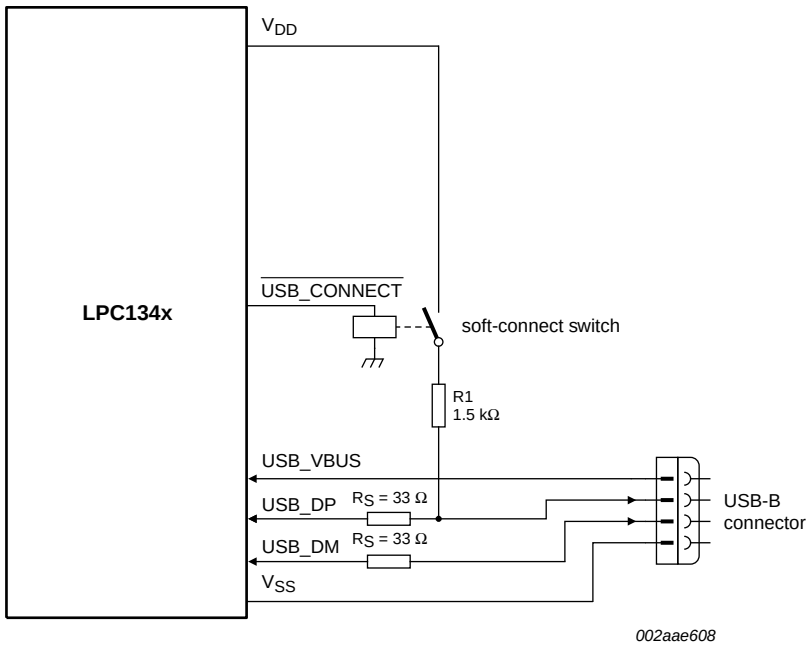

Fig 32. LPC1342/43 USB interface on a self-powered device

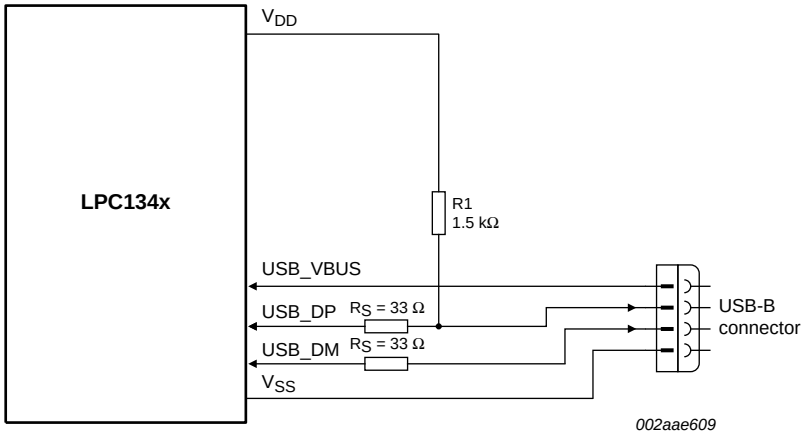

Fig 33. LPC1342/43 USB interface on a bus-powered device

11.2 XTAL input

The input voltage to the on-chip oscillators is limited to 1.8 V. If the oscillator is driven by a clock in slave mode, it is recommended that the input be coupled through a capacitor with C_i = 100 pF. To limit the input voltage to the specified range, choose an additional capacitor to ground C_g which attenuates the input voltage by a factor $C_i/(C_i + C_g)$. In slave mode, a minimum of 200 mV(RMS) is needed.

14. Abbreviations

Table 24. Abbreviations

Acronym	Description
A/D	Analog-to-Digital
ADC	Analog-to-Digital Converter
AHB	Advanced High-performance Bus
AMBA	Advanced Microcontroller Bus Architecture
APB	Advanced Peripheral Bus
BOD	BrownOut Detection
EOP	End Of Packet
ETM	Embedded Trace Macrocell
FIFO	First-In, First-Out
GPIO	General Purpose Input/Output
HID	Human Interface Device
I/O	Input/Output
LSB	Least Significant Bit
MSC	Mass Storage Class
PHY	Physical Layer
PLL	Phase-Locked Loop
SE0	Single Ended Zero
SPI	Serial Peripheral Interface
SSI	Serial Synchronous Interface
SSP	Synchronous Serial Port
SoF	Start-of-Frame
TCM	Tightly-Coupled Memory
TTL	Transistor-Transistor Logic
UART	Universal Asynchronous Receiver/Transmitter
USB	Universal Serial Bus
