### Understanding **Embedded - FPGAs (Field Programmable Gate Array)**

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### **Applications of Embedded - FPGAs**

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### **Details**

Product Status	Obsolete
Number of LABs/CLBs	1805
Number of Logic Elements/Cells	42959
Total RAM Bits	3517440
Number of I/O	252
Number of Gates	-
Voltage - Supply	0.87V ~ 0.93V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	572-BGA, FCBGA
Supplier Device Package	572-FBGA, FC (25x25)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/intel/ep2agx45df25i5n">https://www.e-xfl.com/product-detail/intel/ep2agx45df25i5n</a>

**Notes to Table 1–5:**

- (1) For more information about supply pin connections, refer to the *Arria II Device Family Pin Connection Guidelines*.
- (2) Altera recommends a 3.0-V nominal battery voltage when connecting  $V_{CCBAT}$  to a battery for volatile key backup. If you do not use the volatile security key, you may connect the  $V_{CCBAT}$  to either GND or a 3.0-V power supply.
- (3)  $V_{CCPD}$  must be 2.5-V for I/O banks with 2.5-V and lower  $V_{CCIO}$ , 3.0-V for 3.0-V  $V_{CCIO}$ , and 3.3-V for 3.3-V  $V_{CCIO}$ .
- (4)  $V_{CCIO}$  for 3C and 8C I/O banks where the configuration pins reside only supports 3.3-, 3.0-, 2.5-, or 1.8-V voltage levels.

**Notes to Table 1–48:**

- (1) To achieve the maximum memory block performance, use a memory block clock that comes through global clock routing from an on-chip PLL set to 50% output duty cycle. Use the Quartus II software to report timing for this and other memory block clocking schemes.
- (2) When you use the error detection CRC feature, there is no degradation in  $F_{MAX}$ .

**Notes to Table 1–53:**

- (1)  $f_{HSCLK\_IN} = f_{HSDR} / W$ . Use W to determine the supported selection of input reference clock frequencies for the desired data rate.
- (2) Applicable for interfacing with DPA receivers only. For interfacing with non-DPA receivers, you must calculate the leftover timing margin in the receiver by performing link timing closure analysis. For Arria II GX transmitter to Arria II GX non-DPA receiver, the maximum supported data rate is 945 Mbps. For data rates above 840 Mbps, perform PCB trace compensation by adjusting the PCB trace length for LVDS channels to improve channel-to-channel skews.
- (3) The minimum and maximum specification depends on the clock source (for example, PLL and clock pin) and the clock routing resource you use (global, regional, or local). The I/O differential buffer and input register do not have a minimum toggle rate.
- (4) The specification is only applicable under the influence of core noise.
- (5) Applicable for true LVDS using dedicated SERDES only.
- (6) Dedicated SERDES and DPA features are only available on the right banks.
- (7) You must calculate the leftover timing margin in the receiver by performing link timing closure analysis. You must consider the board skew margin, transmitter channel-to-channel skew, and the receiver sampling margin to determine the leftover timing margin.

## I/O Timing

Altera offers two ways to determine I/O timing:

- Using the Microsoft Excel-based I/O Timing.
- Using the Quartus II Timing Analyzer.

The Microsoft Excel-based I/O Timing provides pin timing performance for each device density and speed grade. The data is typically used prior to designing the FPGA to get an estimate of the timing budget as part of the link timing analysis. The Quartus II timing analyzer provides a more accurate and precise I/O timing data based on the specifics of the design after place-and-route is complete.

The Microsoft Excel-based I/O Timing spreadsheet is downloadable from the [Literature: Arria II Devices](#) web page.
