
Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	PIC
Core Size	16-Bit
Speed	32MHz
Connectivity	I²C, PMP, SPI, UART/USART
Peripherals	Brown-out Detect/Reset, LVD, POR, PWM, WDT
Number of I/O	21
Program Memory Size	48KB (16K x 24)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	8K x 8
Voltage - Supply (Vcc/Vdd)	2V ~ 3.6V
Data Converters	A/D 10x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Through Hole
Package / Case	28-DIP (0.300", 7.62mm)
Supplier Device Package	28-SPDIP
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/pic24fj48ga002-i-sp

TABLE 1-1: DEVICE FEATURES FOR THE PIC24FJ64GA004 FAMILY

Features	16GA002	32GA002	48GA002	64GA002	16GA004	32GA004	48GA004	64GA004
Operating Frequency	DC – 32 MHz							
Program Memory (bytes)	16K	32K	48K	64K	16K	32K	48K	64K
Program Memory (instructions)	5,504	11,008	16,512	22,016	5,504	11,008	16,512	22,016
Data Memory (bytes)	4096	8192			4096	8192		
Interrupt Sources (soft vectors/NMI traps)	43 (39/4)							
I/O Ports	Ports A, B				Ports A, B, C			
Total I/O Pins	21				35			
Timers:								
Total Number (16-bit)	5(1)							
32-Bit (from paired 16-bit timers)	2							
Input Capture Channels	5(1)							
Output Compare/PWM Channels	5(1)							
Input Change Notification Interrupt	21				30			
Serial Communications:								
UART	2(1)							
SPI (3-wire/4-wire)	2(1)							
I^2C™	2							
Parallel Communications (PMP/PSP)	Yes							
JTAG Boundary Scan	Yes							
10-Bit Analog-to-Digital Module (input channels)	10				13			
Analog Comparators	2							
Remappable Pins	16				26			
Resets (and delays)	POR, BOR, RESET Instruction, $\overline{MCLR}$, WDT, Illegal Opcode, REPEAT Instruction, Hardware Traps, Configuration Word Mismatch (PWRT, OST, PLL Lock)							
Instruction Set	76 Base Instructions, Multiple Addressing Mode Variations							
Packages	28-Pin SPDIP/SSOP/SOIC/QFN				44-Pin QFN/TQFP			

Note 1: Peripherals are accessible through remappable pins.

TABLE 1-2: PIC24FJ64GA004 FAMILY PINOUT DESCRIPTIONS (CONTINUED)

Function	Pin Number			I/O	Input Buffer	Description
	28-Pin SPDIP/ SSOP/SOIC	28-Pin QFN	44-Pin QFN/TQFP			
T1CK	12	9	34	I	ST	Timer1 Clock.
TCK	17	14	13	I	ST	JTAG Test Clock Input.
TDI	21	18	35	I	ST	JTAG Test Data Input.
TDO	18	15	32	O	—	JTAG Test Data Output.
TMS	22	19	12	I	ST	JTAG Test Mode Select Input.
VDD	13, 28	10, 25	28, 40	P	—	Positive Supply for Peripheral Digital Logic and I/O Pins.
VDDCAP	20	17	7	P	—	External Filter Capacitor Connection (regulator enabled).
VDDCORE	20	17	7	P	—	Positive Supply for Microcontroller Core Logic (regulator disabled).
VREF-	3	28	20	I	ANA	A/D and Comparator Reference Voltage (low) Input.
VREF+	2	27	19	I	ANA	A/D and Comparator Reference Voltage (high) Input.
VSS	8, 27	5, 24	29, 39	P	—	Ground Reference for Logic and I/O Pins.

Legend: TTL = TTL input buffer ST = Schmitt Trigger input buffer
ANA = Analog level input/output I^2C™ = I^2C/SMBus input buffer

Note 1: Alternative multiplexing when the I2C1SEL Configuration bit is cleared.

1 = BRG generates 4 clocks per bit period (4x baud clock, High-Speed mode)
0 = BRG generates 16 clocks per bit period (16x baud clock, Standard mode)

bit 2-1 **PDSEL<1:0>:** Parity and Data Selection bits
11 = 9-bit data, no parity
10 = 8-bit data, odd parity
01 = 8-bit data, even parity
00 = 8-bit data, no parity

bit 0 **STSEL:** Stop Bit Selection bit
1 = Two Stop bits
0 = One Stop bit

Note 1: If UARTEN = 1, the peripheral inputs and outputs must be configured to an available RPn pin. See **Section 10.4 "Peripheral Pin Select (PPS)"** for more information.

2: This feature is only available for the 16x BRG mode (BRGH = 0).

3: Bit availability depends on pin availability.

18.0 PARALLEL MASTER PORT (PMP)

Note: This data sheet summarizes the features of this group of PIC24F devices. It is not intended to be a comprehensive reference source. For more information, refer to the *"PIC24F Family Reference Manual"*, **"Parallel Master Port (PMP)"** (DS39713).

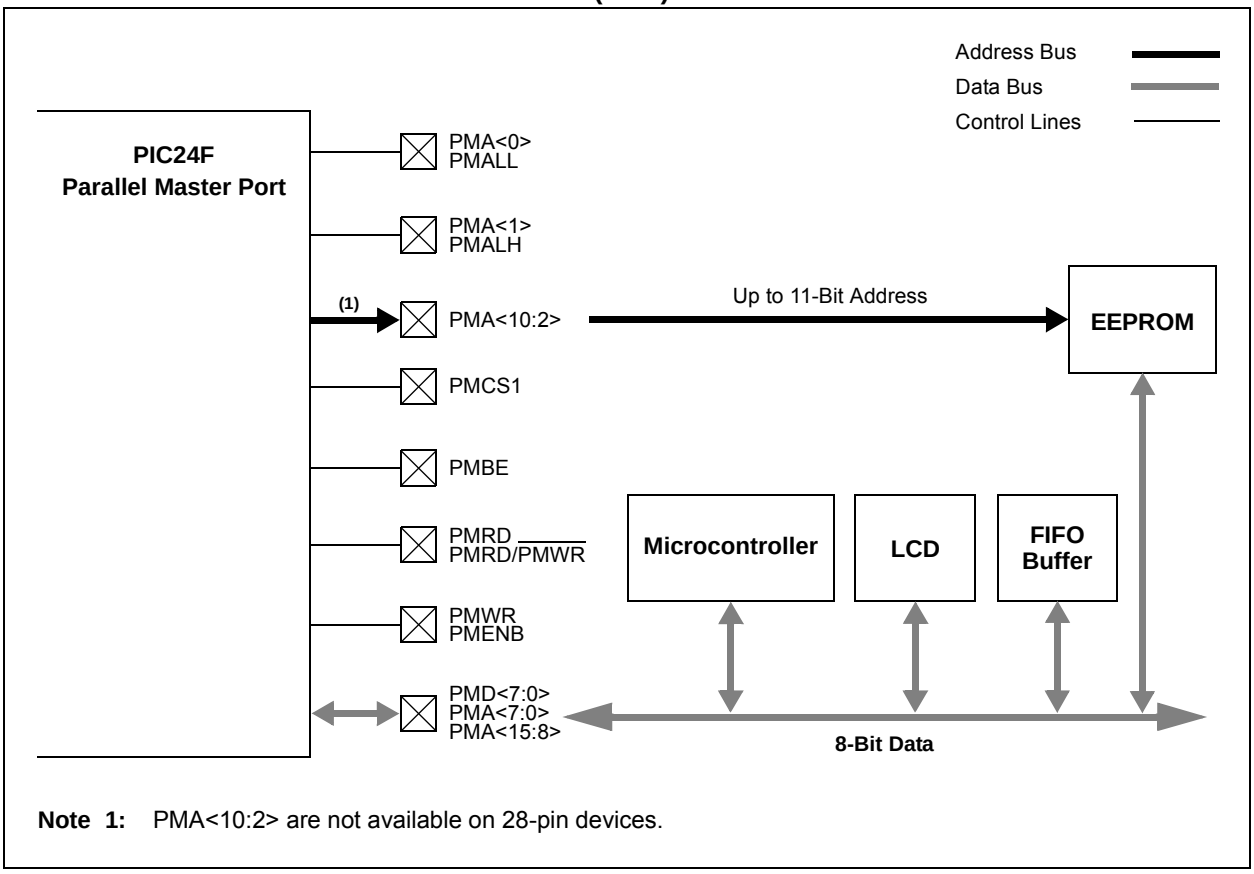
The Parallel Master Port (PMP) module is a parallel 8-bit I/O module, specifically designed to communicate with a wide variety of parallel devices, such as communication peripherals, LCDs, external memory devices and microcontrollers. Because the interface to parallel peripherals varies significantly, the PMP is highly configurable.

Note: A number of the pins for the PMP are not present on PIC24FJ64GA004 devices. Refer to the specific device's pinout to determine which pins are available.

Key features of the PMP module include:

- Up to 16 Programmable Address Lines
- One Chip Select Line
- Programmable Strobe Options:
  - Individual Read and Write Strobes or;
  - Read/$\overline{\text{Write}}$ Strobe with Enable Strobe
- Address Auto-Increment/Auto-Decrement
- Programmable Address/Data Multiplexing
- Programmable Polarity on Control Signals
- Legacy Parallel Slave Port Support
- Enhanced Parallel Slave Support:
  - Address Support
  - 4-Byte Deep Auto-Incrementing Buffer
- Programmable Wait States
- Selectable Input Voltage Levels

FIGURE 18-1: PARALLEL MASTER PORT (PMP) MODULE OVERVIEW



Note 1: PMA<10:2> are not available on 28-pin devices.

-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 15 **BUSY:** Busy bit (Master mode only)
1 = Port is busy (not useful when the processor stall is active)
0 = Port is not busy

bit 14-13 **IRQM<1:0>:** Interrupt Request Mode bits
11 = Interrupt is generated when Read Buffer 3 is read or Write Buffer 3 is written (Buffered PSP mode) or on a read or write operation when PMA<1:0> = 11 (Addressable PSP mode only)
10 = No interrupt is generated, processor stall is activated
01 = Interrupt is generated at the end of the read/write cycle
00 = No interrupt is generated

bit 12-11 **INCM<1:0>:** Increment Mode bits
11 = PSP read and write buffers auto-increment (Legacy PSP mode only)
10 = Decrements ADDR<10:0> by 1 every read/write cycle
01 = Increments ADDR<10:0> by 1 every read/write cycle
00 = No increment or decrement of address

bit 10 **MODE16:** 8/16-Bit Mode bit
1 = 16-Bit Mode: Data register is 16 bits, a read or write to the Data register invokes two 8-bit transfers
0 = 8-Bit Mode: Data register is 8 bits, a read or write to the Data register invokes one 8-bit transfer

bit 9-8 **MODE<1:0>:** Parallel Port Mode Select bits
11 = Master Mode 1 (PMCS1, PMRD/$\overline{\text{PMWR}}$, PMENB, PMBE, PMA<x:0> and PMD<7:0>)
10 = Master Mode 2 (PMCS1, PMRD, $\overline{\text{PMWR}}$, $\overline{\text{PMBE}}$, PMA<x:0> and PMD<7:0>)
01 = Enhanced PSP, control signals ($\overline{\text{PMRD}}$, $\overline{\text{PMWR}}$, $\overline{\text{PMCS1}}$, PMD<7:0> and PMA<1:0>)
00 = Legacy Parallel Slave Port, control signals ($\overline{\text{PMRD}}$, $\overline{\text{PMWR}}$, $\overline{\text{PMCS1}}$ and PMD<7:0>)

bit 7-6 **WAITB<1:0>:** Data Setup to Read/Write Wait State Configuration bits(1)
11 = Data wait of 4 TCY; multiplexed address phase of 4 TCY
10 = Data wait of 3 TCY; multiplexed address phase of 3 TCY
01 = Data wait of 2 TCY; multiplexed address phase of 2 TCY
00 = Data wait of 1 TCY; multiplexed address phase of 1 TCY

bit 5-2 **WAITM<3:0>:** Read to Byte Enable Strobe Wait State Configuration bits
1111 = Wait of additional 15 TCY
...
0001 = Wait of additional 1 TCY
0000 = No additional wait cycles (operation forced into one TCY)

bit 1-0 **WAITE<1:0>:** Data Hold After Strobe Wait State Configuration bits(1)
11 = Wait of 4 TCY
10 = Wait of 3 TCY
01 = Wait of 2 TCY
00 = Wait of 1 TCY

Note 1: WAITBx and WAITEx bits are ignored whenever WAITM<3:0> = 0000.

19.0 REAL-TIME CLOCK AND CALENDAR (RTCC)

Note:	This data sheet summarizes the features of this group of PIC24F devices. It is not intended to be a comprehensive reference source. For more information, refer to the *"PIC24F Family Reference Manual"*, **"Real-Time Clock and Calendar (RTCC)"** (DS39696).

The Real-Time Clock and Calendar (RTCC) provides on-chip, hardware-based clock and calendar functionality with little or no CPU overhead. It is intended for applications where accurate time must be maintained for extended periods, with minimal CPU activity and with limited power resources, such as battery-powered applications.

Key features include:

- Time data in hours, minutes and seconds, with a granularity of one-half second
- 24-hour format (military time) display option
- Calendar data as date, month and year
- Automatic, hardware-based day of week and leap year calculations for dates from 2000 through 2099
- Time and calendar data in BCD format for compact firmware
- Highly configurable alarm function
- External output pin with selectable alarm signal or seconds "tick" signal output
- Time base input from Secondary Oscillator (SOSC) or the T1CK digital clock input (32.768 kHz)
- User calibration feature with auto-adjust

A simplified block diagram of the module is shown in Figure 19-1.The SOSC and RTCC will both remain running while the device is held in Reset with $\overline{\text{MCLR}}$, and will continue running after $\overline{\text{MCLR}}$ is released.

If POSCMD<1:0> = 11 or 00:
1 = OSCO/CLKO/RA3 functions as CLKO (FOSC/2)
0 = OSCO/CLKO/RA3 functions as port I/O (RA3)
If POSCMD<1:0> = 10 or 01:
OSCIOFCN has no effect on OSCO/CLKO/RA3.

Note 1: These bits are implemented only in devices with a major silicon revision level of B or later (DEVREV register value is 3042h or greater). Refer to **Section 28.0 "Packaging Information"** in the device data sheet for the location and interpretation of product date codes.

25.11 Demonstration/Development Boards, Evaluation Kits, and Starter Kits

A wide variety of demonstration, development and evaluation boards for various PIC MCUs and dsPIC DSCs allows quick application development on fully functional systems. Most boards include prototyping areas for adding custom circuitry and provide application firmware and source code for examination and modification.

The boards support a variety of features, including LEDs, temperature sensors, switches, speakers, RS-232 interfaces, LCD displays, potentiometers and additional EEPROM memory.

The demonstration and development boards can be used in teaching environments, for prototyping custom circuits and for learning about various microcontroller applications.

In addition to the PICDEM™ and dsPICDEM™ demonstration/development board series of circuits, Microchip has a line of evaluation kits and demonstration software for analog filter design, KEELOQ® security ICs, CAN, IrDA®, PowerSmart battery management, SEEVAL® evaluation system, Sigma-Delta ADC, flow rate sensing, plus many more.

Also available are starter kits that contain everything needed to experience the specified device. This usually includes a single application and debug capability, all on one board.

Check the Microchip web page (www.microchip.com) for the complete list of demonstration, development and evaluation kits.

25.12 Third-Party Development Tools

Microchip also offers a great collection of tools from third-party vendors. These tools are carefully selected to offer good value and unique functionality.

- Device Programmers and Gang Programmers from companies, such as SoftLog and CCS
- Software Tools from companies, such as Gimpel and Trace Systems
- Protocol Analyzers from companies, such as Saleae and Total Phase
- Demonstration Boards from companies, such as MikroElektronika, Digilent® and Olimex
- Embedded Ethernet Solutions from companies, such as EZ Web Lynx, WIZnet and IPLogika®

26.0 INSTRUCTION SET SUMMARY

Note: This chapter is a brief summary of the PIC24F Instruction Set Architecture (ISA) and is not intended to be a comprehensive reference source.

The PIC24F instruction set adds many enhancements to the previous PIC® MCU instruction sets, while maintaining an easy migration from previous PIC MCU instruction sets. Most instructions are a single program memory word. Only three instructions require two program memory locations.

Each single-word instruction is a 24-bit word divided into an 8-bit opcode, which specifies the instruction type and one or more operands, which further specify the operation of the instruction. The instruction set is highly orthogonal and is grouped into four basic categories:

- Word or byte-oriented operations
- Bit-oriented operations
- Literal operations
- Control operations

Table 26-1 shows the general symbols used in describing the instructions. The PIC24F instruction set summary in Table 26-2 lists all the instructions, along with the status flags affected by each instruction.

Most word or byte-oriented W register instructions (including barrel shift instructions) have three operands:

- The first source operand which is typically a register ‘Wb’ without any address modifier
- The second source operand which is typically a register ‘Ws’ with or without an address modifier
- The destination of the result which is typically a register ‘Wd’ with or without an address modifier

However, word or byte-oriented file register instructions have two operands:

- The file register specified by the value, ‘f’
- The destination, which could either be the file register ‘f’ or the W0 register, which is denoted as ‘WREG’

Most bit-oriented instructions (including simple rotate/shift instructions) have two operands:

- The W register (with or without an address modifier) or file register (specified by the value of ‘Ws’ or ‘f’)
- The bit in the W register or file register (specified by a literal value or indirectly by the contents of register, ‘Wb’)

The literal instructions that involve data movement may use some of the following operands:

- A literal value to be loaded into a W register or file register (specified by the value of ‘k’)
- The W register or file register where the literal value is to be loaded (specified by ‘Wb’ or ‘f’)

However, literal instructions that involve arithmetic or logical operations use some of the following operands:

- The first source operand which is a register ‘Wb’ without any address modifier
- The second source operand which is a literal value
- The destination of the result (only if not the same as the first source operand) which is typically a register ‘Wd’ with or without an address modifier

The control instructions may use some of the following operands:

- A program memory address
- The mode of the table read and table write instructions

All instructions are a single word, except for certain double-word instructions, which were made double-word instructions so that all the required information is available in these 48 bits. In the second word, the 8 MSbs are ‘0’s. If this second word is executed as an instruction (by itself), it will execute as a NOP.

Most single-word instructions are executed in a single instruction cycle, unless a conditional test is true or the Program Counter (PC) is changed as a result of the instruction. In these cases, the execution takes two instruction cycles, with the additional instruction cycle(s) executed as a NOP. Notable exceptions are the BRA (unconditional/computed branch), indirect CALL/GOTO, all table reads and writes, and RETURN/RETFIE instructions, which are single-word instructions but take two or three cycles.

Certain instructions that involve skipping over the subsequent instruction require either two or three cycles if the skip is performed, depending on whether the instruction being skipped is a single-word or two-word instruction. Moreover, double-word moves require two cycles. The double-word instructions execute in two instruction cycles.

FIGURE 27-4: EXTERNAL CLOCK TIMING

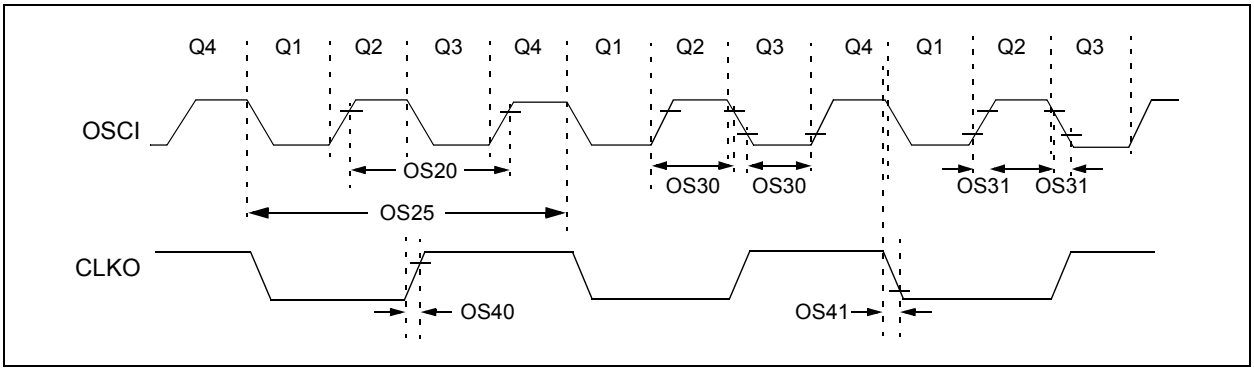

TABLE 27-15: EXTERNAL CLOCK TIMING REQUIREMENTS

AC CHARACTERISTICS			Standard Operating Conditions: 2.0 to 3.6V (unless otherwise stated) Operating temperature -40°C ≤ TA ≤ +85°C for Industrial -40°C ≤ TA ≤ +125°C for Extended				
Param No.	**Sym**	**Characteristic**	**Min**	**Typ(1)**	**Max**	**Units**	**Conditions**
OS10	FOSC	External CLKI Frequency (External clocks allowed only in EC mode)	DC	—	32	MHz	EC, -40°C ≤ TA ≤ +85°C
			4	—	8	MHz	ECPLL, -40°C ≤ TA ≤ +85°C
			DC	—	24	MHz	EC, -40°C ≤ TA ≤ +125°C
			4	—	6	MHz	ECPLL, -40°C ≤ TA ≤ +125°C
		Oscillator Frequency	3	—	10	MHz	XT
			3	—	8	MHz	XTPLL, -40°C ≤ TA ≤ +85°C
			10	—	32	MHz	HS, -40°C ≤ TA ≤ +85°C
			31	—	33	kHz	SOSC
			3	—	6	MHz	XTPLL, -40°C ≤ TA ≤ +125°C
			10	—	24	MHz	HS, -40°C ≤ TA ≤ +125°C
OS20	TOSC	TOSC = 1/FOSC	—	—	—	—	See Parameter OS10 for FOSC value
OS25	TCY	Instruction Cycle Time(2)	62.5	—	DC	ns	
OS30	TosL, TosH	External Clock In (OSCI) High or Low Time	0.45 x TOSC	—	—	ns	EC
OS31	TosR, TosF	External Clock In (OSCI) Rise or Fall Time	—	—	20	ns	EC
OS40	TckR	CLKO Rise Time(3)	—	6	10	ns	
OS41	TckF	CLKO Fall Time(3)	—	6	10	ns	

Note 1: Data in "Typ" column is at 3.3V, +25°C unless otherwise stated. Parameters are for design guidance only and are not tested.

2: Instruction cycle period (TCY) equals two times the input oscillator time base period. All specified values are based on characterization data for that particular oscillator type, under standard operating conditions, with the device executing code. Exceeding these specified limits may result in an unstable oscillator operation and/or higher than expected current consumption. All devices are tested to operate at "Min." values with an external clock applied to the OSCI/CLKI pin. When an external clock input is used, the "Max." cycle time limit is "DC" (no clock) for all devices.

3: Measurements are taken in EC mode. The CLKO signal is measured on the OSCO pin. CLKO is low for the Q1-Q2 period (1/2 TCY) and high for the Q3-Q4 period (1/2 TCY).

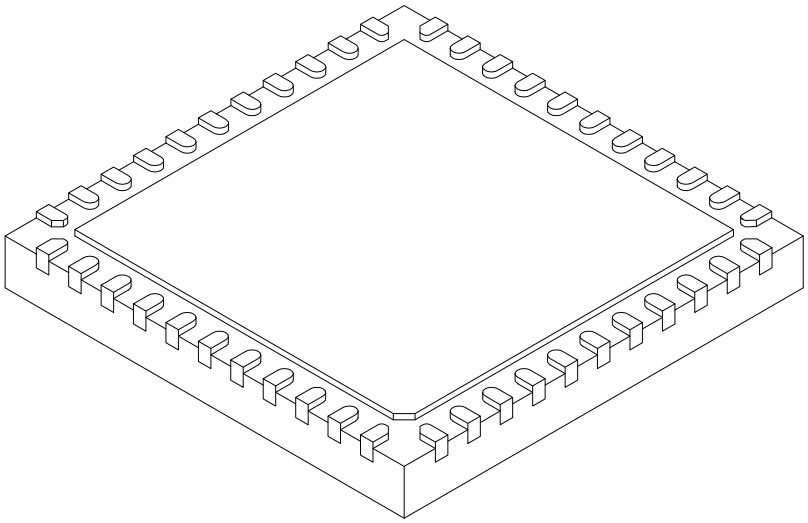
TABLE 27-21: A/D CONVERSION TIMING REQUIREMENTS(1)

AC CHARACTERISTICS			Standard Operating Conditions: 2.0V to 3.6V (unless otherwise stated) Operating temperature -40°C ≤ TA ≤ +85°C for Industrial -40°C ≤ TA ≤ +125°C for Extended				
Param No.	**Symbol**	**Characteristic**	**Min.**	**Typ**	**Max.**	**Units**	**Conditions**
Clock Parameters							
AD50	TAD	A/D Clock Period	75	—	—	ns	TCY = 75 ns, AD1CON3 in default state
AD51	tRC	A/D Internal RC Oscillator Period	—	250	—	ns	
Conversion Rate							
AD55	tCONV	Conversion Time	—	12	—	TAD	
AD56	FCNV	Throughput Rate	—	—	500	ksps	AVDD ≥ 2.7V
AD57	tSAMP	Sample Time	—	1	—	TAD	
Clock Parameters							
AD61	tPSS	Sample Start Delay from Setting Sample bit (SAMP)	2	—	3	TAD	

Note 1: Because the sample caps will eventually lose charge, clock rates below 10 kHz can affect linearity performance, especially at elevated temperatures.

44-Lead Plastic Quad Flat, No Lead Package (ML) - 8x8 mm Body [QFN]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at http://www.microchip.com/packaging



Units		MILLIMETERS		
Dimension Limits		MIN	NOM	MAX
Number of Pins	N		44	
Pitch	e		0.65 BSC	
Overall Height	A	0.80	0.90	1.00
Standoff	A1	0.00	0.02	0.05
Terminal Thickness	A3		0.20 REF	
Overall Width	E		8.00 BSC	
Exposed Pad Width	E2	6.25	6.45	6.60
Overall Length	D		8.00 BSC	
Exposed Pad Length	D2	6.25	6.45	6.60
Terminal Width	b	0.20	0.30	0.35
Terminal Length	L	0.30	0.40	0.50
Terminal-to-Exposed-Pad	K	0.20	-	-

Notes:

1. Pin 1 visual index feature may vary, but must be located within the hatched area.
2. Package is saw singulated
3. Dimensioning and tolerancing per ASME Y14.5M

BSC: Basic Dimension. Theoretically exact value shown without tolerances.

REF: Reference Dimension, usually without tolerance, for information purposes only.

READER RESPONSE

It is our intention to provide you with the best documentation possible to ensure successful use of your Microchip product. If you wish to provide your comments on organization, clarity, subject matter, and ways in which our documentation can better serve you, please FAX your comments to the Technical Publications Manager at (480) 792-4150.

Please list the following information, and use this outline to provide us with your comments about this document.

TO: Technical Publications Manager
RE: Reader Response

Questions:

1. What are the best features of this document?

2. How does this document meet your hardware and software development needs?

3. Do you find the organization of this document easy to follow? If not, why?

4. What additions to the document do you think would enhance the structure and subject?

5. What deletions from the document could be made without affecting the overall usefulness?

6. Is there any incorrect or misleading information (what and where)?

7. How would you improve this document?
