

Welcome to [E-XFL.COM](#)

### **Understanding Embedded - FPGAs (Field Programmable Gate Array)**

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### **Applications of Embedded - FPGAs**

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

#### **Details**

Product Status	Obsolete
Number of LABs/CLBs	6144
Number of Logic Elements/Cells	27648
Total RAM Bits	393216
Number of I/O	660
Number of Gates	1569178
Voltage - Supply	1.71V ~ 1.89V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	1156-BBGA
Supplier Device Package	1156-FBGA (35x35)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/xilinx/xcv1000e-6fg1156c">https://www.e-xfl.com/product-detail/xilinx/xcv1000e-6fg1156c</a>

For in-circuit debugging, an optional download and read-back cable is available. This cable connects the FPGA in the target system to a PC or workstation. After downloading the design into the FPGA, the designer can single-step the

logic, readback the contents of the flip-flops, and so observe the internal logic state. Simple modifications can be downloaded into the system in a matter of minutes.

## Configuration

Virtex-E devices are configured by loading configuration data into the internal configuration memory. Note that attempting to load an incorrect bitstream causes configuration to fail and can damage the device.

Some of the pins used for configuration are dedicated pins, while others can be re-used as general purpose inputs and outputs once configuration is complete.

The following are dedicated pins:

- Mode pins (M2, M1, M0)
- Configuration clock pin (CCLK)
- PROGRAM pin
- DONE pin
- Boundary Scan pins (TDI, TDO, TMS, TCK)

Depending on the configuration mode chosen, CCLK can be an output generated by the FPGA, or can be generated externally and provided to the FPGA as an input. The PROGRAM pin must be pulled High prior to reconfiguration.

Note that some configuration pins can act as outputs. For correct operation, these pins require a  $V_{CCO}$  of 3.3 V or 2.5 V. At 3.3 V the pins operate as LVTTL, and at 2.5 V they

operate as LVCMS. All affected pins fall in banks 2 or 3. The configuration pins needed for SelectMap (CS, Write) are located in bank 1.

## Configuration Modes

Virtex-E supports the following four configuration modes.

- Slave-serial mode
- Master-serial mode
- SelectMAP mode
- Boundary Scan mode (JTAG)

The Configuration mode pins (M2, M1, M0) select among these configuration modes with the option in each case of having the IOB pins either pulled up or left floating prior to configuration. The selection codes are listed in [Table 8](#).

Configuration through the Boundary Scan port is always available, independent of the mode selection. Selecting the Boundary Scan mode simply turns off the other modes. The three mode pins have internal pull-up resistors, and default to a logic High if left unconnected. However, it is recommended to drive the configuration mode pins externally.

**Table 8: Configuration Codes**

Configuration Mode	M2 <sup>(1)</sup>	M1	M0	CCLK Direction	Data Width	Serial D <sub>out</sub>	Configuration Pull-ups <sup>(1)</sup>
Master-serial mode	0	0	0	Out	1	Yes	No
Boundary Scan mode	1	0	1	N/A	1	No	No
SelectMAP mode	1	1	0	In	8	No	No
Slave-serial mode	1	1	1	In	1	Yes	No
Master-serial mode	1	0	0	Out	1	Yes	Yes
Boundary Scan mode	0	0	1	N/A	1	No	Yes
SelectMAP mode	0	1	0	In	8	No	Yes
Slave-serial mode	0	1	1	In	1	Yes	Yes

**Notes:**

1. M2 is sampled continuously from power up until the end of the configuration. Toggling M2 while INIT is being held externally Low can cause the configuration pull-up settings to change.

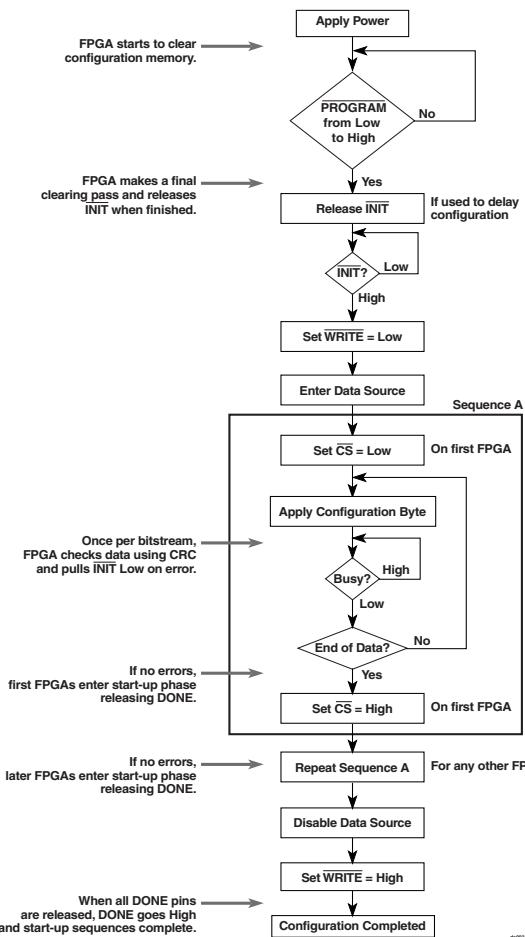

Figure 18: SelectMAP Flowchart for Write Operations

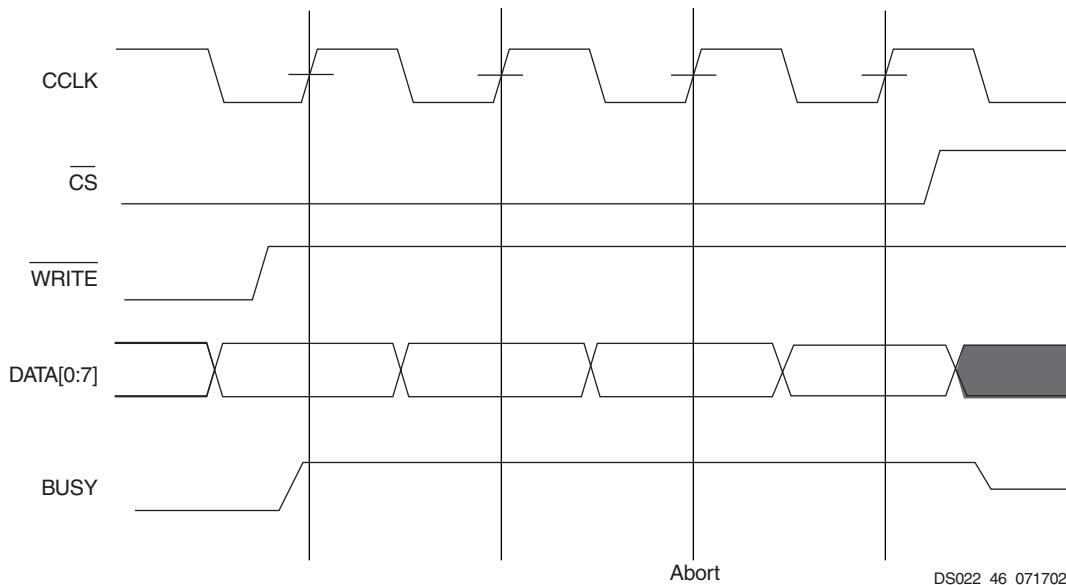

Figure 19: SelectMAP Write Abort Waveforms

### Boundary Scan Mode

In the Boundary Scan mode, configuration is done through the IEEE 1149.1 Test Access Port. Note that the

**PROGRAM** pin must be pulled High prior to reconfiguration. A Low on the **PROGRAM** pin resets the TAP controller and no JTAG operations can be performed.

standard requires a Differential Amplifier input buffer and a Push-Pull output buffer.

### **SSTL3 — Stub Series Terminated Logic for 3.3V**

The Stub Series Terminated Logic for 3.3V, or SSTL3 standard is a general purpose 3.3V memory bus standard also sponsored by Hitachi and IBM (JESD8-8). This standard has two classes, I and II. Selectl/O devices support both classes for the SSTL3 standard. This standard requires a Differential Amplifier input buffer and an Push-Pull output buffer.

### **SSTL2 — Stub Series Terminated Logic for 2.5V**

The Stub Series Terminated Logic for 2.5V, or SSTL2 standard is a general purpose 2.5V memory bus standard sponsored by Hitachi and IBM (JESD8-9). This standard has two classes, I and II. Selectl/O devices support both classes for the SSTL2 standard. This standard requires a Differential Amplifier input buffer and an Push-Pull output buffer.

### **CTT — Center Tap Terminated**

The Center Tap Terminated, or CTT standard is a 3.3V memory bus standard sponsored by Fujitsu (JESD8-4). This standard requires a Differential Amplifier input buffer and a Push-Pull output buffer.

### **AGP-2X — Advanced Graphics Port**

The Intel AGP standard is a 3.3V Advanced Graphics Port-2X bus standard used with the Pentium II processor for graphics applications. This standard requires a Push-Pull output buffer and a Differential Amplifier input buffer.

### **LVDS — Low Voltage Differential Signal**

LVDS is a differential I/O standard. It requires that one data bit is carried through two signal lines. As with all differential signaling standards, LVDS has an inherent noise immunity over single-ended I/O standards. The voltage swing between two signal lines is approximately 350mV. The use of a reference voltage ( $V_{REF}$ ) or a board termination voltage ( $V_{TT}$ ) is not required. LVDS requires the use of two pins per input or output. LVDS requires external resistor termination.

### **BLVDS — Bus LVDS**

This standard allows for bidirectional LVDS communication between two or more devices. The external resistor termination is different than the one for standard LVDS.

### **LVPECL — Low Voltage Positive Emitter Coupled Logic**

LVPECL is another differential I/O standard. It requires two signal lines for transmitting one data bit. This standard specifies two pins per input or output. The voltage swing between these two signal lines is approximately 850 mV. The use of a reference voltage ( $V_{REF}$ ) or a board termination voltage ( $V_{TT}$ ) is not required. The LVPECL standard requires external resistor termination.

## **Library Symbols**

The Xilinx library includes an extensive list of symbols designed to provide support for the variety of Selectl/O features. Most of these symbols represent variations of the five generic Selectl/O symbols.

- IBUF (input buffer)
- IBUFG (global clock input buffer)
- OBUF (output buffer)
- OBUFT (3-state output buffer)
- IOBUF (input/output buffer)

### **IBUF**

Signals used as inputs to the Virtex-E device must source an input buffer (IBUF) via an external input port. The generic Virtex-E IBUF symbol appears in Figure 37. The extension

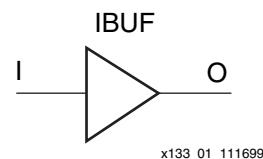

Figure 37: **Input Buffer (IBUF) Symbols**

to the base name defines which I/O standard the IBUF uses. The assumed standard is LVTTL when the generic IBUF has no specified extension.

The following list details the variations of the IBUF symbol:

- IBUF
- IBUF\_LVCMOS2
- IBUF\_PCI33\_3
- IBUF\_PCI66\_3
- IBUF\_GTL
- IBUF\_GTL\_P
- IBUF\_HSTL\_I
- IBUF\_HSTL\_III
- IBUF\_HSTL\_IV
- IBUF\_SSTL3\_I
- IBUF\_SSTL3\_II
- IBUF\_SSTL2\_I
- IBUF\_SSTL2\_II
- IBUF\_CTT
- IBUF\_AGP
- IBUF\_LVCMOS18
- IBUF\_LVDS
- IBUF\_LVPECL

When the IBUF symbol supports an I/O standard that requires a  $V_{REF}$ , the IBUF automatically configures as a differential amplifier input buffer. The  $V_{REF}$  voltage must be supplied on the  $V_{REF}$  pins. In the case of LVDS, LVPECL, and BLVDS,  $V_{REF}$  is not required.

Input/Output Standard	V <sub>IL</sub>		V <sub>IH</sub>		V <sub>OL</sub>	V <sub>OH</sub>	I <sub>OL</sub>	I <sub>OH</sub>
	V, Min	V, Max	V, Min	V, Max	V, Max	V, Min	mA	mA
CTT	-0.5	V <sub>REF</sub> - 0.2	V <sub>REF</sub> + 0.2	3.6	V <sub>REF</sub> - 0.4	V <sub>REF</sub> + 0.4	8	-8
AGP	-0.5	V <sub>REF</sub> - 0.2	V <sub>REF</sub> + 0.2	3.6	10% V <sub>CCO</sub>	90% V <sub>CCO</sub>	Note 2	Note 2

**Notes:**

1. V<sub>OL</sub> and V<sub>OH</sub> for lower drive currents are sample tested.
2. Tested according to the relevant specifications.
3. DC input and output levels for HSTL18 (HSTL I/O standard with V<sub>CCO</sub> of 1.8 V) are provided in an HSTL white paper on [www.xilinx.com](http://www.xilinx.com).

**LVDS DC Specifications**

DC Parameter	Symbol	Conditions	Min	Typ	Max	Units
Supply Voltage	V <sub>CCO</sub>		2.375	2.5	2.625	V
Output High Voltage for Q and $\bar{Q}$	V <sub>OH</sub>	R <sub>T</sub> = 100 Ω across Q and $\bar{Q}$ signals	1.25	1.425	1.6	V
Output Low Voltage for Q and $\bar{Q}$	V <sub>OL</sub>	R <sub>T</sub> = 100 Ω across Q and $\bar{Q}$ signals	0.9	1.075	1.25	V
Differential Output Voltage (Q - $\bar{Q}$ ), Q = High ( $\bar{Q}$ - Q), $\bar{Q}$ = High	V <sub>ODIFF</sub>	R <sub>T</sub> = 100 Ω across Q and $\bar{Q}$ signals	250	350	450	mV
Output Common-Mode Voltage	V <sub>OCM</sub>	R <sub>T</sub> = 100 Ω across Q and $\bar{Q}$ signals	1.125	1.25	1.375	V
Differential Input Voltage (Q - $\bar{Q}$ ), Q = High ( $\bar{Q}$ - Q), $\bar{Q}$ = High	V <sub>IDIFF</sub>	Common-mode input voltage = 1.25 V	100	350	NA	mV
Input Common-Mode Voltage	V <sub>ICM</sub>	Differential input voltage = ±350 mV	0.2	1.25	2.2	V

Note: Refer to the Design Consideration section for termination schematics.

**LVPECL DC Specifications**

These values are valid at the output of the source termination pack shown under **LVPECL**, with a 100 Ω differential load only. The V<sub>OH</sub> levels are 200 mV below standard LVPECL levels and are compatible with devices tolerant of lower common-mode ranges. The following table summarizes the DC output specifications of LVPECL.

DC Parameter	Min	Max	Min	Max	Min	Max	Units
V <sub>CCO</sub>	3.0		3.3		3.6		V
V <sub>OH</sub>	1.8	2.11	1.92	2.28	2.13	2.41	V
V <sub>OL</sub>	0.96	1.27	1.06	1.43	1.30	1.57	V
V <sub>IH</sub>	1.49	2.72	1.49	2.72	1.49	2.72	V
V <sub>IL</sub>	0.86	2.125	0.86	2.125	0.86	2.125	V
Differential Input Voltage	0.3	-	0.3	-	0.3	-	V

## IOB Output Switching Characteristics Standard Adjustments

Output delays terminating at a pad are specified for LVTTL with 12 mA drive and fast slew rate. For other standards, adjust the delays by the values shown.

Description	Symbol	Standard	Speed Grade				Units
			Min	-8	-7	-6	
<b>Output Delay Adjustments</b>							
Standard-specific adjustments for output delays terminating at pads (based on standard capacitive load, C <sub>SL</sub> )	T <sub>OLVTTL_S2</sub>	LVTTL, Slow, 2 mA	4.2	+14.7	+14.7	+14.7	ns

## Virtex-E Pin-to-Pin Input Parameter Guidelines

All devices are 100% functionally tested. Listed below are representative values for typical pin locations and normal clock loading. Values are expressed in nanoseconds unless otherwise noted.

### Global Clock Set-Up and Hold for LVTTL Standard, with DLL

Description <sup>(1)</sup>	Symbol	Device	Speed Grade <sup>(2, 3)</sup>				Units
			Min	-8	-7	-6	
Input Setup and Hold Time Relative to Global Clock Input Signal for LVTTL Standard. For data input with different standards, adjust the setup time delay by the values shown in <b>IOB Input Switching Characteristics Standard Adjustments</b> , page 8.							
No Delay Global Clock and IFF, with DLL	$T_{PSDLL}/T_{PHDLL}$	XCV50E	1.5 / -0.4	1.5 / -0.4	1.6 / -0.4	1.7 / -0.4	ns
		XCV100E	1.5 / -0.4	1.5 / -0.4	1.6 / -0.4	1.7 / -0.4	ns
		XCV200E	1.5 / -0.4	1.5 / -0.4	1.6 / -0.4	1.7 / -0.4	ns
		XCV300E	1.5 / -0.4	1.5 / -0.4	1.6 / -0.4	1.7 / -0.4	ns
		XCV400E	1.5 / -0.4	1.5 / -0.4	1.6 / -0.4	1.7 / -0.4	ns
		XCV600E	1.5 / -0.4	1.5 / -0.4	1.6 / -0.4	1.7 / -0.4	ns
		XCV1000E	1.5 / -0.4	1.5 / -0.4	1.6 / -0.4	1.7 / -0.4	ns
		XCV1600E	1.5 / -0.4	1.5 / -0.4	1.6 / -0.4	1.7 / -0.4	ns
		XCV2000E	1.5 / -0.4	1.5 / -0.4	1.6 / -0.4	1.7 / -0.4	ns
		XCV2600E	1.5 / -0.4	1.5 / -0.4	1.6 / -0.4	1.7 / -0.4	ns
		XCV3200E	1.5 / -0.4	1.5 / -0.4	1.6 / -0.4	1.7 / -0.4	ns

#### Notes:

1. IFF = Input Flip-Flop or Latch
2. Setup time is measured relative to the Global Clock input signal with the fastest route and the lightest load. Hold time is measured relative to the Global Clock input signal with the slowest route and heaviest load.
3. DLL output jitter is already included in the timing calculation.

## **Virtex-E Pin Definitions**

<b>Pin Name</b>	<b>Dedicated Pin</b>	<b>Direction</b>	<b>Description</b>
GCK0, GCK1, GCK2, GCK3	Yes	Input	Clock input pins that connect to Global Clock Buffers.
M0, M1, M2	Yes	Input	Mode pins are used to specify the configuration mode.
CCLK	Yes	Input or Output	The configuration Clock I/O pin: it is an input for SelectMAP and slave-serial modes, and output in master-serial mode. After configuration, it is input only, logic level = Don't Care.
PROGRAM	Yes	Input	Initiates a configuration sequence when asserted Low.
DONE	Yes	Bidirectional	Indicates that configuration loading is complete, and that the start-up sequence is in progress. The output can be open drain.
INIT	No	Bidirectional (Open-drain)	When Low, indicates that the configuration memory is being cleared. The pin becomes a user I/O after configuration.
BUSY/DOUT	No	Output	In SelectMAP mode, BUSY controls the rate at which configuration data is loaded. The pin becomes a user I/O after configuration unless the SelectMAP port is retained.  In bit-serial modes, DOUT provides preamble and configuration data to downstream devices in a daisy-chain. The pin becomes a user I/O after configuration.
D0/DIN, D1, D2, D3, D4, D5, D6, D7	No	Input or Output	In SelectMAP mode, D0-7 are configuration data pins. These pins become user I/Os after configuration unless the SelectMAP port is retained.  In bit-serial modes, DIN is the single data input. This pin becomes a user I/O after configuration.
WRITE	No	Input	In SelectMAP mode, the active-low Write Enable signal. The pin becomes a user I/O after configuration unless the SelectMAP port is retained.
CS	No	Input	In SelectMAP mode, the active-low Chip Select signal. The pin becomes a user I/O after configuration unless the SelectMAP port is retained.
TDI, TDO, TMS, TCK	Yes	Mixed	Boundary-scan Test-Access-Port pins, as defined in IEEE1149.1.
DXN, DXP	Yes	N/A	Temperature-sensing diode pins. (Anode: DXP, cathode: DXN)
V <sub>CCINT</sub>	Yes	Input	Power-supply pins for the internal core logic.
V <sub>CCO</sub>	Yes	Input	Power-supply pins for the output drivers (subject to banking rules)
V <sub>REF</sub>	No	Input	Input threshold voltage pins. Become user I/Os when an external threshold voltage is not needed (subject to banking rules).
GND	Yes	Input	Ground

## FG1156 Differential Pin Pairs

Virtex-E devices have differential pin pairs that can also provide other functions when not used as a differential pair. The AO column in [Table 29](#) indicates which devices in this package can use the pin pair as an asynchronous output. The “Other Functions” column indicates alternative function(s) that are not available when the pair is used as a differential pair or differential clock.

**Table 29: FG1156 Differential Pin Pair Summary:  
XCV1000E, XCV1600E, XCV2000E, XCV2600E, XCV3200E**

Pair	Bank	P Pin	N Pin	AO	Other Functions
