Microchip Technology - PIC24F16KM102-E/SS Datasheet

Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Obsolete
Core Processor	PIC
Core Size	16-Bit
Speed	32MHz
Connectivity	I²C, IrDA, LINbus, SPI, UART/USART
Peripherals	Brown-out Detect/Reset, LVD, POR, PWM, WDT
Number of I/O	24
Program Memory Size	16KB (5.5K x 24)
Program Memory Type	FLASH
EEPROM Size	512 x 8
RAM Size	1K x 8
Voltage - Supply (Vcc/Vdd)	1.8V ~ 3.6V
Data Converters	A/D 19x10b/12b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 125°C (TA)
Mounting Type	Surface Mount
Package / Case	28-SSOP (0.209", 5.30mm Width)
Supplier Device Package	28-SSOP
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/pic24f16km102-e-ss

EXAMPLE 5-5: INITIATING A PROGRAMMING SEQUENCE – ASSEMBLY LANGUAGE CODE

```
        DISI    #5                      ; Block all interrupts
                                          for next 5 instructions
        MOV     #0x55, W0
        MOV     W0, NVMKEY              ; Write the 55 key
        MOV     #0xAA, W1               ;
        MOV     W1, NVMKEY              ; Write the AA key
        BSET    NVMCON, #WR             ; Start the erase sequence
        NOP                             ; 2 NOPs required after setting WR
        NOP                             ;
        BTSC    NVMCON, #15             ; Wait for the sequence to be completed
        BRA     $-2                     ;
```

EXAMPLE 5-6: INITIATING A PROGRAMMING SEQUENCE – 'C' LANGUAGE CODE

```
// C example using MPLAB C30

asm("DISI #5");               // Block all interrupts for next 5 instructions

__builtin_write_NVM();        // Perform unlock sequence and set WR
```

6.0 DATA EEPROM MEMORY

Note: This data sheet summarizes the features of this group of PIC24F devices. It is not intended to be a comprehensive reference source. For more information on data EEPROM, refer to the *"PIC24F Family Reference Manual"*, **"Data EEPROM"** (DS39720).

The data EEPROM memory is a Nonvolatile Memory (NVM), separate from the program and volatile data RAM. Data EEPROM memory is based on the same Flash technology as program memory, and is optimized for both long retention and a higher number of erase/write cycles.

The data EEPROM is mapped to the top of the user program memory space, with the top address at program memory address, 7FFE00h to 7FFFFFh. The size of the data EEPROM is 256 words in PIC24FXXXXX devices.

The data EEPROM is organized as 16-bit-wide memory. Each word is directly addressable, and is readable and writable during normal operation over the entire VDD range.

Unlike the Flash program memory, normal program execution is not stopped during a data EEPROM program or erase operation.

The data EEPROM programming operations are controlled using the three NVM Control registers:

- NVMCON: Nonvolatile Memory Control Register
- NVMKEY: Nonvolatile Memory Key Register
- NVMADR: Nonvolatile Memory Address Register

6.1 NVMCON Register

The NVMCON register (Register 6-1) is also the primary control register for data EEPROM program/erase operations. The upper byte contains the control bits used to start the program or erase cycle and the flag bit to indicate if the operation was successfully performed. The lower byte of NVMCOM configures the type of NVM operation that will be performed.

6.2 NVMKEY Register

The NVMKEY is a write-only register that is used to prevent accidental writes or erasures of data EEPROM locations.

To start any programming or erase sequence, the following instructions must be executed first, in the exact order provided:

1. Write 55h to NVMKEY.
2. Write AAh to NVMKEY.

After this sequence, a write will be allowed to the NVMCON register for one instruction cycle. In most cases, the user will simply need to set the WR bit in the NVMCON register to start the program or erase cycle. Interrupts should be disabled during the unlock sequence.

The MPLAB® C30 C compiler provides a defined library procedure (`builtin_write_NVM`) to perform the unlock sequence. Example 6-1 illustrates how the unlock sequence can be performed with in-line assembly.

EXAMPLE 6-1: DATA EEPROM UNLOCK SEQUENCE

```
//Disable Interrupts For 5 instructions
asm volatile   ("disi #5");
//Issue Unlock Sequence
asm volatile   ("mov #0x55, W0     \n"
                "mov W0, NVMKEY    \n"
                "mov #0xAA, W1     \n"
                "mov W1, NVMKEY    \n");
// Perform Write/Erase operations
asm volatile   ("bset NVMCON, #WR  \n"
                "nop               \n"
                "nop               \n");
```

Note 1: These bits are not implemented in 20-pin devices.
2: These bits are not implemented in 28-pin devices.

13.3 Output Compare Mode

Output Compare mode compares the Timer register value with the value of one or two Compare registers, depending on its mode of operation. The Output Compare x module on compare match events has the ability to generate a single output transition or a train of output pulses. Like most PIC® MCU peripherals, the Output Compare x module can also generate interrupts on a compare match event.

Table 13-3 shows the various modes available in Output Compare modes.

TABLE 13-3: OUTPUT COMPARE/PWM MODES

MOD<3:0> (CCPxCON1L<3:0>)	T32 (CCPxCON1L<5>)	Operating Mode	
0001	0	Output High on Compare (16-bit)	Single Edge Mode
0001	1	Output High on Compare (32-bit)	
0010	0	Output Low on Compare (16-bit)	
0010	1	Output Low on Compare (32-bit)	
0011	0	Output Toggle on Compare (16-bit)	
0011	1	Output Toggle on Compare (32-bit)

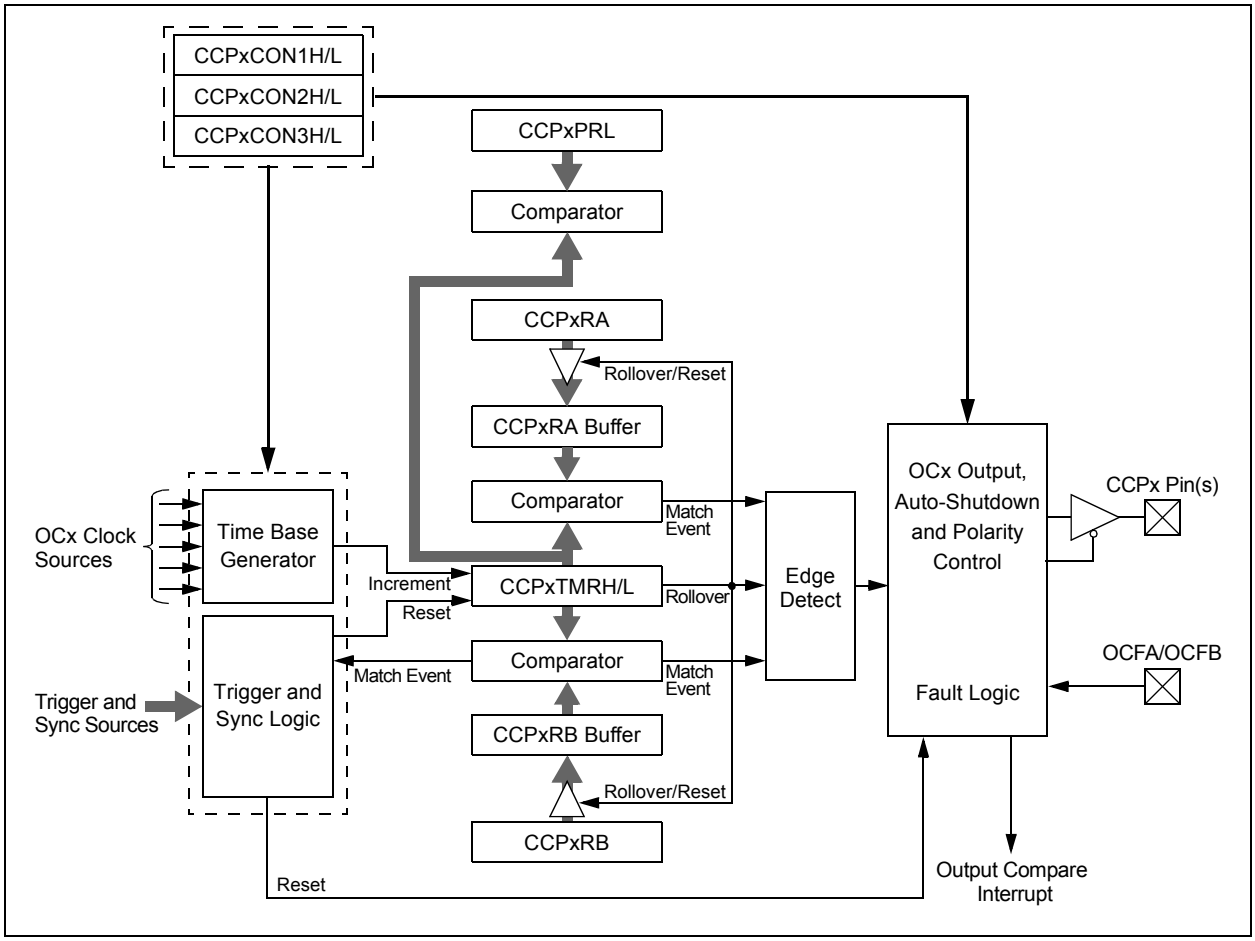
0111	1	Variable Frequency Pulse (32-bit)	

FIGURE 13-5: OUTPUT COMPARE x BLOCK DIAGRAM



16.0 REAL-TIME CLOCK AND CALENDAR (RTCC)

Note: This data sheet summarizes the features of this group of PIC24F devices. It is not intended to be a comprehensive reference source. For more information on the Real-Time Clock and Calendar, refer to the *"PIC24F Family Reference Manual"*, **"Real-Time Clock and Calendar (RTCC)"** (DS39696).

The RTCC provides the user with a Real-Time Clock and Calendar (RTCC) function that can be calibrated.

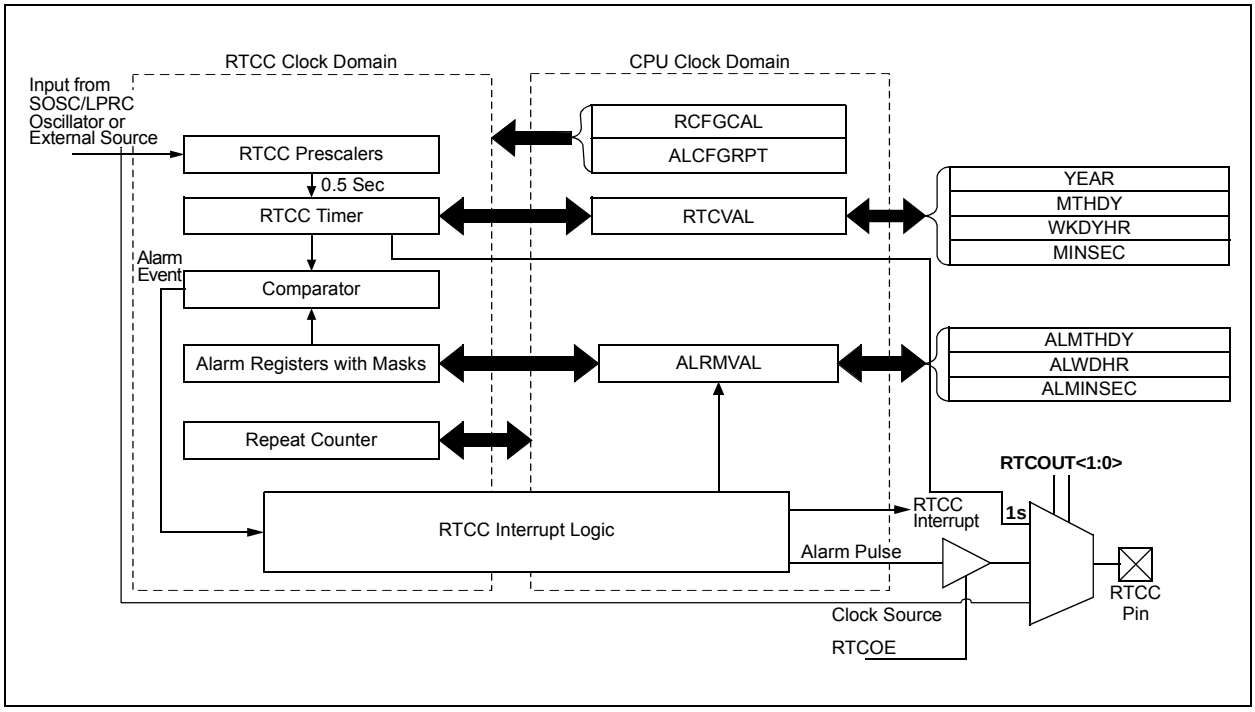
Key features of the RTCC module are:

- Operates in Sleep and Retention Sleep modes
- Selectable clock source
- Provides hours, minutes and seconds using 24-hour format
- Visibility of one half second period
- Provides calendar – weekday, date, month and year
- Alarm-configurable for half a second, one second, 10 seconds, one minute, 10 minutes, one hour, one day, one week, one month or one year
- Alarm repeat with decrementing counter
- Alarm with indefinite repeat chime
- Year 2000 to 2099 leap year correction
- BCD format for smaller software overhead
- Optimized for long term battery operation
- User calibration of the 32.768 kHz clock crystal/32K INTRC frequency with periodic auto-adjust
- Optimized for long term battery operation
- Fractional second synchronization
- Calibration to within ±2.64 seconds error per month
- Calibrates up to 260 ppm of crystal error
- Ability to periodically wake-up external devices without CPU intervention (external power control)
- Power control output for external circuit control
- Calibration takes effect every 15 seconds
- Runs from any one of the following:
  - External Real-Time Clock of 32.768 kHz
  - Internal 31.25 kHz LPRC Clock
  - 50 Hz or 60 Hz External Input

16.1 RTCC Source Clock

The user can select between the SOSC crystal oscillator, LPRC internal oscillator or an external 50 Hz/60 Hz power line input as the clock reference for the RTCC module. This gives the user an option to trade off system cost, accuracy and power consumption, based on the overall system needs.

FIGURE 16-1: RTCC BLOCK DIAGRAM



REGISTER 16-1: RCFGCAL: RTCC CALIBRATION AND CONFIGURATION REGISTER(1) (CONTINUED)

bit 7-0 **CAL<7:0>:** RTC Drift Calibration bits

01111111 = Maximum positive adjustment; adds 508 RTC clock pulses every one minute
.
.
.
00000001 = Minimum positive adjustment; adds 4 RTC clock pulses every one minute
00000000 = No adjustment
11111111 = Minimum negative adjustment; subtracts 4 RTC clock pulses every one minute
.
.
.
10000000 = Maximum negative adjustment; subtracts 512 RTC clock pulses every one minute

Note 1: The RCFGCAL register is only affected by a POR.

2: A write to the RTCEN bit is only allowed when RTCWREN = 1.

3: This bit is read-only; it is cleared to '0' on a write to the lower half of the MINSEC register.

19.1 A/D Control Registers

The 12-bit A/D Converter module uses up to 43 registers for its operation. All registers are mapped in the data memory space.

19.1.1 CONTROL REGISTERS

Depending on the specific device, the module has up to eleven control and status registers:

- AD1CON1: A/D Control Register 1
- AD1CON2: A/D Control Register 2
- AD1CON3: A/D Control Register 3
- AD1CON5: A/D Control Register 5
- AD1CHS: A/D Sample Select Register
- AD1CHITH and AD1CHITL: A/D Scan Compare Hit Registers
- AD1CSSH and AD1CSSL: A/D Input Scan Select Registers
- AD1CTMENH and AD1CTMENL: CTMU Enable Registers

The AD1CON1, AD1CON2 and AD1CON3 registers (Register 19-1, Register 19-2 and Register 19-3) control the overall operation of the A/D module. This includes enabling the module, configuring the conversion clock and voltage reference sources, selecting the sampling and conversion Triggers, and manually controlling the sample/convert sequences. The AD1CON5 register (Register 19-4) specifically controls features of the Threshold Detect operation, including its function in power-saving modes.

The AD1CHS register (Register 19-5) selects the input channels to be connected to the S/H amplifier. It also allows the choice of input multiplexers and the selection of a reference source for differential sampling.

The AD1CHITH and AD1CHITL registers (Register 19-6 and Register 19-7) are semaphore registers used with Threshold Detect operations. The status of individual bits, or bit pairs in some cases, indicates if a match condition has occurred. AD1CHITL is always implemented, whereas AD1CHITH may not be implemented in devices with 16 or fewer channels.

The AD1CSSH/L registers (Register 19-8 and Register 19-9) select the channels to be included for sequential scanning.

The AD1CTMENH/L registers (Register 19-10 and Register 19-11) select the channel(s) to be used by the CTMU during conversions. Selecting a particular channel allows the A/D Converter to control the CTMU (particularly, its current source) and read its data through that channel. AD1CTMENL is always implemented, whereas AD1CTMENH may not be implemented in devices with 16 or fewer channels.

19.1.2 A/D RESULT BUFFERS

The module incorporates a multi-word, dual port buffer, called ADC1BUFx. Each of the locations is mapped into the data memory space and is separately addressable. The buffer locations are referred to as ADC1BUF0 through ADC1BUFx (x = up to 17).

The A/D result buffers are both readable and writable. When the module is active (AD1CON<15> = 1), the buffers are read-only and store the results of A/D conversions. When the module is inactive (AD1CON<15> = 0), the buffers are both readable and writable. In this state, writing to a buffer location programs a conversion threshold for Threshold Detect operations.

Buffer contents are not cleared when the module is deactivated with the ADON bit (AD1CON1<15>). Conversion results and any programmed threshold values are maintained when ADON is set or cleared.

TABLE 19-2: NUMERICAL EQUIVALENTS OF VARIOUS RESULT CODES: 12-BIT FRACTIONAL FORMATS

VIN/VREF	12-Bit Output Code	16-Bit Fractional Format/ Equivalent Decimal Value		16-Bit Signed Fractional Format/ Equivalent Decimal Value

26.0 DEVELOPMENT SUPPORT

The PIC® microcontrollers (MCU) and dsPIC® digital signal controllers (DSC) are supported with a full range of software and hardware development tools:

- Integrated Development Environment
  - MPLAB® X IDE Software
- Compilers/Assemblers/Linkers
  - MPLAB XC Compiler
  - MPASM™ Assembler
  - MPLINK™ Object Linker/ MPLIB™ Object Librarian
  - MPLAB Assembler/Linker/Librarian for Various Device Families
- Simulators
  - MPLAB X SIM Software Simulator
- Emulators
  - MPLAB REAL ICE™ In-Circuit Emulator
- In-Circuit Debuggers/Programmers
  - MPLAB ICD 3
  - PICkit™ 3
- Device Programmers
  - MPLAB PM3 Device Programmer
- Low-Cost Demonstration/Development Boards, Evaluation Kits and Starter Kits
- Third-party development tools

26.1 MPLAB X Integrated Development Environment Software

The MPLAB X IDE is a single, unified graphical user interface for Microchip and third-party software, and hardware development tool that runs on Windows®, Linux and Mac OS® X. Based on the NetBeans IDE, MPLAB X IDE is an entirely new IDE with a host of free software components and plug-ins for high-performance application development and debugging. Moving between tools and upgrading from software simulators to hardware debugging and programming tools is simple with the seamless user interface.

With complete project management, visual call graphs, a configurable watch window and a feature-rich editor that includes code completion and context menus, MPLAB X IDE is flexible and friendly enough for new users. With the ability to support multiple tools on multiple projects with simultaneous debugging, MPLAB X IDE is also suitable for the needs of experienced users.

Feature-Rich Editor:

- Color syntax highlighting
- Smart code completion makes suggestions and provides hints as you type
- Automatic code formatting based on user-defined rules
- Live parsing

User-Friendly, Customizable Interface:

- Fully customizable interface: toolbars, toolbar buttons, windows, window placement, etc.
- Call graph window

Project-Based Workspaces:

- Multiple projects
- Multiple tools
- Multiple configurations
- Simultaneous debugging sessions

File History and Bug Tracking:

- Local file history feature
- Built-in support for Bugzilla issue tracker

26.11 Demonstration/Development Boards, Evaluation Kits and Starter Kits

A wide variety of demonstration, development and evaluation boards for various PIC MCUs and dsPIC DSCs allows quick application development on fully functional systems. Most boards include prototyping areas for adding custom circuitry and provide application firmware and source code for examination and modification.

The boards support a variety of features, including LEDs, temperature sensors, switches, speakers, RS-232 interfaces, LCD displays, potentiometers and additional EEPROM memory.

The demonstration and development boards can be used in teaching environments, for prototyping custom circuits and for learning about various microcontroller applications.

In addition to the PICDEM™ and dsPICDEM™ demonstration/development board series of circuits, Microchip has a line of evaluation kits and demonstration software for analog filter design, KEELOQ® security ICs, CAN, IrDA®, PowerSmart battery management, SEEVAL® evaluation system, Sigma-Delta ADC, flow rate sensing, plus many more.

Also available are starter kits that contain everything needed to experience the specified device. This usually includes a single application and debug capability, all on one board.

Check the Microchip web page (www.microchip.com) for the complete list of demonstration, development and evaluation kits.

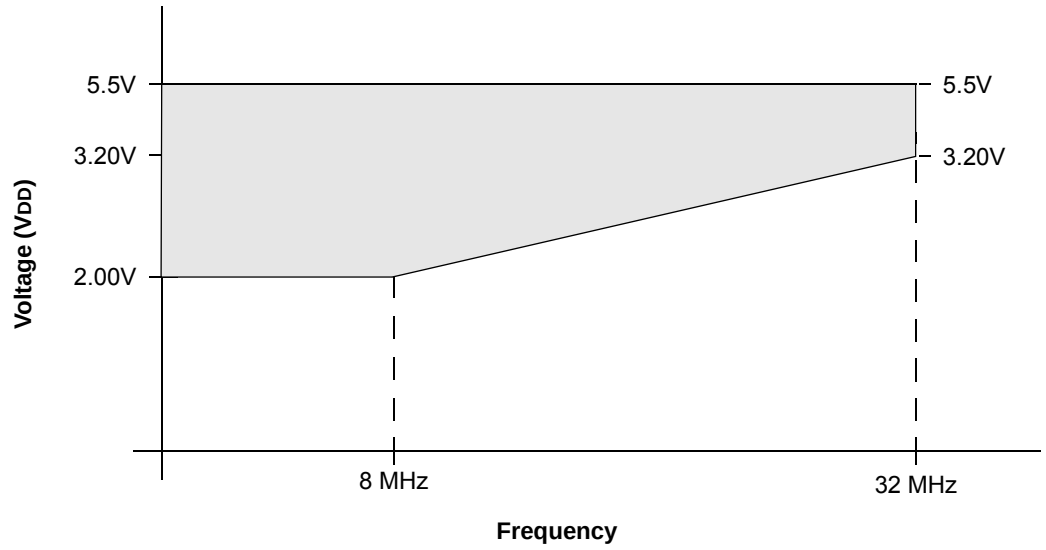
26.12 Third-Party Development Tools

Microchip also offers a great collection of tools from third-party vendors. These tools are carefully selected to offer good value and unique functionality.

- Device Programmers and Gang Programmers from companies, such as SoftLog and CCS
- Software Tools from companies, such as Gimpel and Trace Systems
- Protocol Analyzers from companies, such as Saleae and Total Phase
- Demonstration Boards from companies, such as MikroElektronika, Digilent® and Olimex
- Embedded Ethernet Solutions from companies, such as EZ Web Lynx, WIZnet and IPLogika®

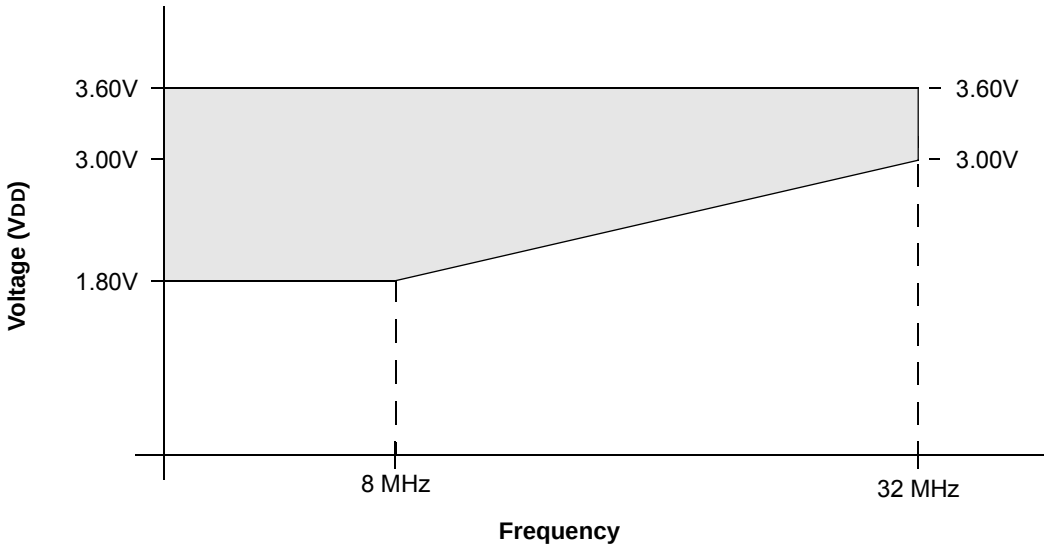
27.1 DC Characteristics

FIGURE 27-1: PIC24FV16KM204 FAMILY VOLTAGE-FREQUENCY GRAPH (INDUSTRIAL)



Note: For frequencies between 8 MHz and 32 MHz, FMAX = 20 MHz * (VDD – 2.0) + 8 MHz.

FIGURE 27-2: PIC24F16KM204 FAMILY VOLTAGE-FREQUENCY GRAPH (INDUSTRIAL)



Note: For frequencies between 8 MHz and 32 MHz, FMAX = 20 MHz * (VDD – 1.8) + 8 MHz.

TABLE 27-8: DC CHARACTERISTICS: POWER-DOWN CURRENT (IPD)

DC CHARACTERISTICS		Standard Operating Conditions: 1.8V to 3.6V (PIC24F16KM204) 2.0V to 5.5V (PIC24FV16KM204) Operating temperature -40°C ≤ TA ≤ +85°C for Industrial -40°C ≤ TA ≤ +125°C for Extended					
Parameter No.	**Device**	**Typical(1)**	**Max**	**Units**	**Conditions**		
Power-Down Current (IPD)							
DC60	PIC24FV16KMXXX	6.0	—	µA	-40°C	2.0V	Sleep Mode(2)
			8.0		+25°C		
			8.5		+60°C		
			9.0		+85°C		
			15.0		+125°C		
		6.0	—	µA	-40°C	5.0V	
			8.0		+25°C		
			9.0		+60°C		
			10.0		+85°C		
			15.0		+125°C		
	PIC24F16KMXXX	0.025	—	µA	-40°C	1.8V	
			0.80		+25°C		
			1.5		+60°C		
			2.0		+85°C		
			7.5		+125°C		
		0.040	—	µA	-40°C	3.3V	
			1.0		+25°C		
			2.0		+60°C		
			3.0		+85°C		
			7.5		+125°C		
DC61	PIC24FV16KMXXX	0.25	—	µA	+85°C	2.0V	Low-Voltage Sleep Mode(2)
			7.5		+125°C		
		0.35	3.0	µA	+85°C	5.0V	
			7.5		+125°C		

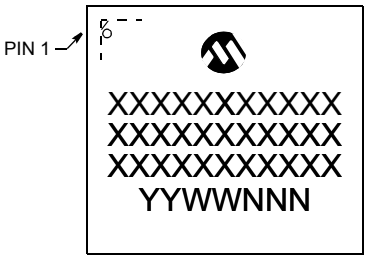
Legend: Unshaded rows represent PIC24F16KMXXX devices and shaded rows represent PIC24FV16KMXXX devices.

Note 1: Data in the Typical column is at 3.3V, +25°C (PIC24F16KMXXX) or 5.0V, +25°C (PIC24FV16KMXXX) unless otherwise stated. Parameters are for design guidance only and are not tested.

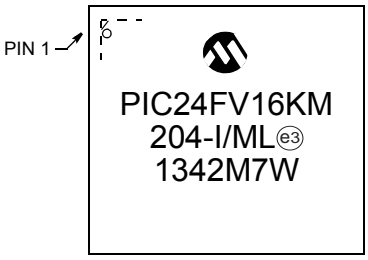
2: Base IPD is measured with all peripherals and clocks shut down. All I/Os are configured as outputs and set low. PMSLP is set to '0' and WDT, etc., are all switched off.

3: The Δ current is the additional current consumed when the module is enabled. This current should be added to the base IPD current.

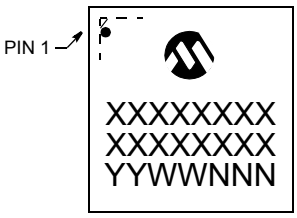
44-Lead QFN (8x8x0.9 mm)



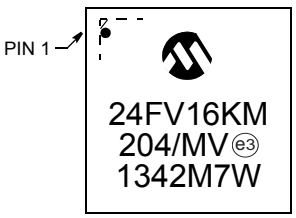
Example



48-Lead UQFN (6x6x0.5 mm)



Example



20-Lead Plastic Small Outline (SO) - Wide, 7.50 mm Body [SOIC]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at http://www.microchip.com/packaging
