What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Details	
Product Status	Obsolete
Core Processor	Z8
Core Size	8-Bit
Speed	12MHz
Connectivity	EBI/EMI
Peripherals	POR, WDT
Number of I/O	24
Program Memory Size	4KB (4K x 8)
Program Memory Type	ROM
EEPROM Size	-
RAM Size	237 x 8
Voltage - Supply (Vcc/Vdd)	3V ~ 5.5V
Data Converters	-
Oscillator Type	Internal
Operating Temperature	0°C ~ 70°C (TA)
Mounting Type	-

* General-Purpose

■ 28-Pin DIP, 28-Pin SOIC, 28-Pin PLCC Packages (Z86C3X)
40-Pin DIP, 44-Pin PLCC/QFP Packages (Z86C40)

■ 3.0V to 5.5V Operating Range

■ Low-Power Consumption

■ –40°C to +105°C Operating Range

■ Expanded Register File (ERF)

■ 32 Input/Output Lines (C40)
24 Input/Output Lines (C3X)

■ Vectored, Prioritized Interrupts with Programmable Polarity

■ Two Analog Comparators

■ Two Programmable 8-Bit Counter/Timers, Each with Two 6-Bit Programmable Prescaler

■ Watch-Dog Timer/Power-On Reset

■ On-Chip Oscillator that Accepts a Crystal, Ceramic Resonator, LC, RC, or External Clock

■ RAM and ROM Protect

GENERAL DESCRIPTION

The Z86C3X/C40 Consumer Controller Processors (CCP) are members of the Z8® single-chip microcontroller family offering a unique register-to-register architecture that avoids accumulator bottlenecks and offers fast execution of code.

Three address spaces (Program Memory, Register File, and Expanded Register File [ERF]), support a wide range of memory configurations. Through the ERF, the designer has access to three additional control registers that provide extra peripheral devices, I/O ports, and register addresses. The rest of the ERF is not physically implemented and is open for future expansion.

For applications demanding powerful I/O capabilities, the Z86C3X/C40's dedicated input and output lines are grouped into three and four ports, respectively, and are configurable under software control to provide timing, status signals, or parallel I/O.

Two on-chip counter/timers, with a large number of selectable modes, offload the system of administering real-time tasks such as counting/timing and I/O data communications.

With ROM/ROMless selectivity, the Z86C40 provides both external memory and pre-programmed ROM, which enables these Z8 microcontrollers to be used in high-volume applications, or where code flexibility is required.

Notes:
All Signals with a preceding front slash, "/", are active Low, e.g.: B//W (WORD is active Low); /B/W (BYTE is active Low, only).

Power connections follow conventional descriptions below:

Maximum Allowable Output Current Sinked by Any I/O Pin		25	mA
Maximum Allowable Output Current Sourced by Any I/O Pin		25	mA

Notes:
[1] This applies to all pins except XTAL pins and where otherwise noted.
[2] There is no input protection diode from pin to V_{DD}.
[3] This excludes XTAL pins.
[4] Device pin is not at an output Low state.

Notice:
Stresses greater than those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at any condition above those indicated in the operational sections of these specifications is not implied. Exposure to absolute maximum rating conditions for an extended period may affect device reliability.

Total power dissipation should not exceed 1.21 W for the package. Power dissipation is calculated as follows:

$$\text{Total Power Dissipation} = V_{DD} \times [\ I_{DD} - (\text{sum of } I_{OH}) \ ] + \text{sum of } [\ (V_{DD} - V_{OH}) \times I_{OH}] + \text{sum of } (V_{OL} \times I_{OL})$$

STANDARD TEST CONDITIONS

The characteristics listed below apply for standard test conditions as noted. All voltages are referenced to Ground. Positive current flows into the referenced pin (Test Load).

Notes:
[1] When using extended memory timing add 2 TpC.
[2] Timing numbers given are for minimum TpC.
[3] The V_{CC} voltage specification of 3.0V guarantees 3.3V ± 0.3V, and the V_{DD} voltage specification of 5.5V guarantees 5.0V ± 0.5V.

Standard Test Load
All timing references use 0.7 V_{CC} for a logic 1 and 0.2 V_{CC} for a logic 0. For Standard Mode (not Low-EMI Mode for outputs) with SMR D1 = 0, D0 = 0.

PRECAUTIONS

1. When in ROM Protect Mode, and executing out of *External Program Memory*, instructions LDC, LDCI, LDE, and LDEI *cannot* read Internal Program Memory.

2. When in ROM Protect Mode, and executing out of *Internal Program Memory*, instructions LDC, LDCI, LDE, and LDEI *can* read Internal Program Memory.

3. Low EMI is 25 percent of standard pull-down output driver and 25 percent of standard pull-up output driver.

4. The Port 3 outputs are reset to High State after Reset, except after Stop-Mode Recovery, at which time the outputs remain in the last state.

5. Extended timing is operable.

6. P0/P1/P2/P3 is Low-EMI software programmable.

7. P0/P1/P2 is software programmable for open-drain.

8. Expanded register PCON is Write Only.

9. WDTMR is writeable only within the first 60 system clocks after Reset. Afterward, the WDTMR is write protected.

10. Device functions down to the V_{LV} threshold. At temperatures less than 25°C, the V_{LV} threshold will rise to a maximum V_{DD} of 3.3V.

11. Registers FE Hex (SPH) and FF Hex (SPL) are set to 00 Hex after any reset.

12. When Low EMI OSC is selected (PCON Reg Bit D7=0), the output drive of /DS, /AS, and R//W will also be in low EMI mode.

13. P01M Reg Bit D4, D3 must be set to 00 Hex for Z86C30/31/32.

Pre-Characterization Product:

The product represented by this CPS is newly introduced and Zilog has not completed the full characterization of the product. The CPS states what Zilog knows about this product at this time, but additional features or non-conformance with some aspects of the CPS may be found, either by Zilog or its customers in the course of further application and characterization work. In addition, Zilog cautions that delivery may be uncertain at times, due to start-up yield issues.
