

Welcome to [E-XFL.COM](#)

Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details

Product Status	Obsolete
Number of LABs/CLBs	-
Number of Logic Elements/Cells	520
Total RAM Bits	-
Number of I/O	52
Number of Gates	20000
Voltage - Supply	1.14V ~ 1.575V
Mounting Type	Surface Mount
Operating Temperature	-20°C ~ 85°C (TJ)
Package / Case	81-WFBGA, CSBGA
Supplier Device Package	81-UCSP (4x4)
Purchase URL	https://www.e-xfl.com/product-detail/microsemi/agln020v2-ucg81

Notes:

1. Not recommended for new designs. Few devices/packages are obsoleted. For more information on obsoleted devices/packages, refer to the PDN 1503 - IGLOO nano Z and ProASIC3 nano Z Families.
2. AGLN030 and smaller devices do not support this feature.
3. AGLN060, AGLN125, and AGLN250 in the CS81 package do not support PLLs.
4. For higher densities and support of additional features, refer to the DS0095: IGLOO Low Power Flash FPGAs Datasheet and IGLOOe Low-Power Flash FPGAs Datasheet.

I/Os Per Package

IGLOO nano Devices	AGLN010	AGLN015 ¹	AGLN020		AGLN060	AGLN125	AGLN250

VQ100	—	—	—	77	71	71	68

Notes:

1. Not recommended for new designs.
2. When considering migrating your design to a lower- or higher-density device, refer to the DS0095: IGLOO Low Power Flash FPGAs Datasheet and IGLOO FPGA Fabric User's Guide to ensure compliance with design and board migration requirements.
3. When the Flash*Freeze pin is used to directly enable Flash*Freeze mode and not used as a regular I/O, the number of single-ended user I/Os available is reduced by one.
4. "G" indicates RoHS-compliant packages. Refer to "IGLOO nano Ordering Information" on page IV for the location of the "G" in the part number. For nano devices, the VQ100 package is offered in both leaded and RoHS-compliant versions. All other packages are RoHS-compliant only.

Table 1 • IGLOO nano FPGAs Package Sizes Dimensions

Packages	UC36	UC81	CS81	QN48	QN68	VQ100
Length × Width (mm\mm)	3 x 3	4 x 4	5 x 5	6 x 6	8 x 8	14 x 14

Height (mm)	0.80	0.80	0.80	0.90	0.90	1.20

Device Marking

Microsemi normally topside marks the full ordering part number on each device. There are some exceptions to this, such as some of the Z feature grade nano devices, the V2 designator for IGLOO devices, and packages where space is physically limited. Packages that have limited characters available are UC36, UC81, CS81, QN48, QN68, and QFN132. On these specific packages, a subset of the device marking will be used that includes the required legal information and as much of the part number as allowed by character limitation of the device. In this case, devices will have a truncated device marking and may exclude the applications markings, such as the I designator for Industrial Devices or the ES designator for Engineering Samples.

Figure 1 shows an example of device marking based on the AGLN250V2-CSG81. The actual mark will vary by the device/package combination ordered.

Figure 1 • Example of Device Marking for Small Form Factor Packages

1 – IGLOO nano Device Overview

General Description

The IGLOO family of flash FPGAs, based on a 130-nm flash process, offers the lowest power FPGA, a single-chip solution, small footprint packages, reprogrammability, and an abundance of advanced features.

The Flash*Freeze technology used in IGLOO nano devices enables entering and exiting an ultra-low power mode that consumes nanoPower while retaining SRAM and register data. Flash*Freeze technology simplifies power management through I/O and clock management with rapid recovery to operation mode.

The Low Power Active capability (static idle) allows for ultra-low power consumption while the IGLOO nano device is completely functional in the system. This allows the IGLOO nano device to control system power management based on external inputs (e.g., scanning for keyboard stimulus) while consuming minimal power.

Nonvolatile flash technology gives IGLOO nano devices the advantage of being a secure, low power, single-chip solution that is Instant On. The IGLOO nano device is reprogrammable and offers time-to-market benefits at an ASIC-level unit cost.

These features enable designers to create high-density systems using existing ASIC or FPGA design flows and tools.

IGLOO nano devices offer 1 kbit of on-chip, reprogrammable, nonvolatile FlashROM storage as well as clock conditioning circuitry based on an integrated phase-locked loop (PLL). The AGLN030 and smaller devices have no PLL or RAM support. IGLOO nano devices have up to 250 k system gates, supported with up to 36 kbits of true dual-port SRAM and up to 71 user I/Os.

IGLOO nano devices increase the breadth of the IGLOO product line by adding new features and packages for greater customer value in high volume consumer, portable, and battery-backed markets. Features such as smaller footprint packages designed with two-layer PCBs in mind, power consumption measured in nanoPower, Schmitt trigger, and bus hold (hold previous I/O state in Flash*Freeze mode) functionality make these devices ideal for deployment in applications that require high levels of flexibility and low cost.

Flash*Freeze Technology

The IGLOO nano device offers unique Flash*Freeze technology, allowing the device to enter and exit ultra-low power Flash*Freeze mode. IGLOO nano devices do not need additional components to turn off I/Os or clocks while retaining the design information, SRAM content, and registers. Flash*Freeze technology is combined with in-system programmability, which enables users to quickly and easily upgrade and update their designs in the final stages of manufacturing or in the field. The ability of IGLOO nano V2 devices to support a wide range of core voltage (1.2 V to 1.5 V) allows further reduction in power consumption, thus achieving the lowest total system power.

During Flash*Freeze mode, each I/O can be set to the following configurations: hold previous state, tristate, HIGH, or LOW.

The availability of low power modes, combined with reprogrammability, a single-chip and single-voltage solution, and small-footprint packages make IGLOO nano devices the best fit for portable electronics.

Flash Advantages

Low Power

Flash-based IGLOO nano devices exhibit power characteristics similar to those of an ASIC, making them an ideal choice for power-sensitive applications. IGLOO nano devices have only a very limited power-on current surge and no high-current transition period, both of which occur on many FPGAs.

IGLOO nano devices also have low dynamic power consumption to further maximize power savings; power is reduced even further by the use of a 1.2 V core voltage.

Low dynamic power consumption, combined with low static power consumption and Flash*Freeze technology, gives the IGLOO nano device the lowest total system power offered by any FPGA.

Security

Nonvolatile, flash-based IGLOO nano devices do not require a boot PROM, so there is no vulnerable external bitstream that can be easily copied. IGLOO nano devices incorporate FlashLock, which provides a unique combination of reprogrammability and design security without external overhead, advantages that only an FPGA with nonvolatile flash programming can offer.

IGLOO nano devices utilize a 128-bit flash-based lock and a separate AES key to provide the highest level of security in the FPGA industry for programmed intellectual property and configuration data. In addition, all FlashROM data in IGLOO nano devices can be encrypted prior to loading, using the industry-leading AES-128 (FIPS192) bit block cipher encryption standard. AES was adopted by the National Institute of Standards and Technology (NIST) in 2000 and replaces the 1977 DES standard. IGLOO nano devices have a built-in AES decryption engine and a flash-based AES key that make them the most comprehensive programmable logic device security solution available today. IGLOO nano devices with AES-based security provide a high level of protection for remote field updates over public networks such as the Internet, and are designed to ensure that valuable IP remains out of the hands of system overbuilders, system cloners, and IP thieves.

Security, built into the FPGA fabric, is an inherent component of IGLOO nano devices. The flash cells are located beneath seven metal layers, and many device design and layout techniques have been used to make invasive attacks extremely difficult. IGLOO nano devices, with FlashLock and AES security, are unique in being highly resistant to both invasive and noninvasive attacks. Your valuable IP is protected with industry-standard security, making remote ISP possible. An IGLOO nano device provides the best available security for programmable logic designs.

Single Chip

Flash-based FPGAs store their configuration information in on-chip flash cells. Once programmed, the configuration data is an inherent part of the FPGA structure, and no external configuration data needs to be loaded at system power-up (unlike SRAM-based FPGAs). Therefore, flash-based IGLOO nano FPGAs do not require system configuration components such as EEPROMs or microcontrollers to load device configuration data. This reduces bill-of-materials costs and PCB area, and increases security and system reliability.

Instant On

Microsemi flash-based IGLOO nano devices support Level 0 of the Instant On classification standard. This feature helps in system component initialization, execution of critical tasks before the processor wakes up, setup and configuration of memory blocks, clock generation, and bus activity management. The Instant On feature of flash-based IGLOO nano devices greatly simplifies total system design and reduces total system cost, often eliminating the need for CPLDs and clock generation PLLs. In addition, glitches and brownouts in system power will not corrupt the IGLOO nano device's flash configuration, and unlike SRAM-based FPGAs, the device will not have to be reloaded when system power is restored. This enables the reduction or complete removal of the configuration PROM, expensive voltage monitor, brownout detection, and clock generator devices from the PCB design. Flash-based IGLOO nano devices simplify total system design and reduce cost and design risk while increasing system reliability and improving system initialization time.

IGLOO nano flash FPGAs enable the user to quickly enter and exit Flash*Freeze mode. This is done almost instantly (within 1 μ s) and the device retains configuration and data in registers and RAM. Unlike SRAM-based FPGAs, the device does not need to reload configuration and design state from external memory components; instead it retains all necessary information to resume operation immediately.

Figure 1-3 • IGLOO Device Architecture Overview with Two I/O Banks (AGLN060, AGLN125)

Figure 1-4 • IGLOO Device Architecture Overview with Four I/O Banks (AGLN250)

Power per I/O Pin

Table 2-13 • Summary of I/O Input Buffer Power (per pin) – Default I/O Software Settings
Applicable to IGLOO nano I/O Banks

	VCCI (V)	Dynamic Power PAC9 (μW/MHz) ¹
Single-Ended		
3.3 V LVTTTL / 3.3 V LVCMOS	3.3	16.38
3.3 V LVTTTL / 3.3 V LVCMOS – Schmitt Trigger	3.3	18.89
3.3 V LVCMOS Wide Range ²	3.3	16.38
3.3 V LVCMOS Wide Range – Schmitt Trigger	3.3	18.89
2.5 V LVCMOS	2.5	4.71
2.5 V LVCMOS – Schmitt Trigger	2.5	6.13
1.8 V LVCMOS	1.8	1.64
1.8 V LVCMOS – Schmitt Trigger	1.8	1.79
1.5 V LVCMOS (JESD8-11)	1.5	0.97
1.5 V LVCMOS (JESD8-11) – Schmitt Trigger	1.5	0.96
1.2 V LVCMOS ³	1.2	0.57
1.2 V LVCMOS – Schmitt Trigger ³	1.2	0.52
1.2 V LVCMOS Wide Range ³	1.2	0.57
1.2 V LVCMOS Wide Range – Schmitt Trigger ³	1.2	0.52

Notes:

1. PAC9 is the total dynamic power measured on V_{CCI}.
2. All LVCMOS 3.3 V software macros support LVCMOS 3.3 V wide range as specified in the JESD8-B specification.
3. Applicable to IGLOO nano V2 devices operating at VCCI ≥ VCC.

Table 2-14 • Summary of I/O Output Buffer Power (per pin) – Default I/O Software Settings¹
Applicable to IGLOO nano I/O Banks

	C _{LOAD} (pF)	VCCI (V)	Dynamic Power PAC10 (μW/MHz) ²
Single-Ended			
3.3 V LVTTTL / 3.3 V LVCMOS	5	3.3	107.98
3.3 V LVCMOS Wide Range ³	5	3.3	107.98
2.5 V LVCMOS	5	2.5	61.24
1.8 V LVCMOS	5	1.8	31.28
1.5 V LVCMOS (JESD8-11)	5	1.5	21.50
1.2 V LVCMOS ⁴	5	1.2	15.22

Notes:

1. Dynamic power consumption is given for standard load and software default drive strength and output slew.
2. PAC10 is the total dynamic power measured on VCCI.
3. All LVCMOS 3.3 V software macros support LVCMOS 3.3 V wide range as specified in the JESD8-B specification.
4. Applicable for IGLOO nano V2 devices operating at VCCI ≥ VCC.

Guidelines

Toggle Rate Definition

A toggle rate defines the frequency of a net or logic element relative to a clock. It is a percentage. If the toggle rate of a net is 100%, this means that this net switches at half the clock frequency. Below are some examples:

- The average toggle rate of a shift register is 100% because all flip-flop outputs toggle at half of the clock frequency.
- The average toggle rate of an 8-bit counter is 25%:
 - Bit 0 (LSB) = 100%
 - Bit 1 = 50%
 - Bit 2 = 25%
 - ...
 - Bit 7 (MSB) = 0.78125%
 - Average toggle rate = $(100\% + 50\% + 25\% + 12.5\% + \dots + 0.78125\%) / 8$

Enable Rate Definition

Output enable rate is the average percentage of time during which tristate outputs are enabled. When nontristate output buffers are used, the enable rate should be 100%.

Table 2-19 • Toggle Rate Guidelines Recommended for Power Calculation

Component	Definition	Guideline
α_1	Toggle rate of VersaTile outputs	10%
α_2	I/O buffer toggle rate	10%

Table 2-20 • Enable Rate Guidelines Recommended for Power Calculation

Component	Definition	Guideline
β_1	I/O output buffer enable rate	100%
β_2	RAM enable rate for read operations	12.5%
β_3	RAM enable rate for write operations	12.5%

Overview of I/O Performance

Summary of I/O DC Input and Output Levels – Default I/O Software Settings

Table 2-21 • Summary of Maximum and Minimum DC Input and Output Levels
Applicable to Commercial and Industrial Conditions—Software Default Settings

I/O Standard	Drive Strength	Equivalent Software Default Drive Strength ²	Slew Rate	VIL		VIH		VOL	VOH	IOL ¹	IOH ¹
				Min. V	Max. V	Min. V	Max. V	Max. V	Min. V	mA	mA
3.3 V LVTTTL / 3.3 V LVCMOS	8 mA	8 mA	High	–0.3	0.8	2	3.6	0.4	2.4	8	8
3.3 V LVCMOS Wide Range ³	100 μ A	8 mA	High	–0.3	0.8	2	3.6	0.2	VCCI – 0.2	100 μ A	100 μ A
2.5 V LVCMOS	8 mA	8 mA	High	–0.3	0.7	1.7	3.6	0.7	1.7	8	8
1.8 V LVCMOS	4 mA	4 mA	High	–0.3	0.35 * VCCI	0.65 * VCCI	3.6	0.45	VCCI – 0.45	4	4
1.5 V LVCMOS	2 mA	2 mA	High	–0.3	0.35 * VCCI	0.65 * VCCI	3.6	0.25 * VCCI	0.75 * VCCI	2	2
1.2 V LVCMOS ⁴	1 mA	1 mA	High	–0.3	0.35 * VCCI	0.65 * VCCI	3.6	0.25 * VCCI	0.75 * VCCI	1	1
1.2 V LVCMOS Wide Range ^{4,5}	100 μ A	1 mA	High	–0.3	0.3 * VCCI	0.7 * VCCI	3.6	0.1	VCCI – 0.1	100 μ A	100 μ A

Notes:

1. Currents are measured at 85°C junction temperature.
2. The minimum drive strength for any LVCMOS 1.2 V or LVCMOS 3.3 V software configuration when run in wide range is $\pm 100 \mu$ A. Drive strength displayed in the software is supported for normal range only. For a detailed I/V curve, refer to the IBIS models.
3. All LVCMOS 3.3 V software macros support LVCMOS 3.3 V wide range, as specified in the JESD8-B specification.
4. Applicable to IGLOO nano V2 devices operating at VCCI \geq VCC.
5. All LVCMOS 1.2 V software macros support LVCMOS 1.2 V wide range, as specified in the JESD8-12 specification.

Table 2-22 • Summary of Maximum and Minimum DC Input Levels
Applicable to Commercial and Industrial Conditions

DC I/O Standards	Commercial ¹		Industrial ²	
	IIL ³	IIH ⁴	IIL ³	IIH ⁴
	μ A	μ A	μ A	μ A
3.3 V LVTTTL / 3.3 V LVCMOS	10	10	15	15
3.3 V LVCOMS Wide Range	10	10	15	15
2.5 V LVCMOS	10	10	15	15
1.8 V LVCMOS	10	10	15	15

VersaTile Specifications as a Sequential Module

The IGLOO nano library offers a wide variety of sequential cells, including flip-flops and latches. Each has a data input and optional enable, clear, or preset. In this section, timing characteristics are presented for a representative sample from the library. For more details, refer to the *IGLOO, ProASIC3, SmartFusion and Fusion Macro Library Guide for Software v10.1*.

t_{WPRE}	Asynchronous Preset Minimum Pulse Width for the Core Register	0.46	ns
t_{CKMPWH}	Clock Minimum Pulse Width HIGH for the Core Register	0.95	ns
t_{CKMPWL}	Clock Minimum Pulse Width LOW for the Core Register	0.95	ns

Note: For specific junction temperature and voltage supply levels, refer to Table 2-7 on page 2-7 for derating values.

1.2 V DC Core Voltage

Table 2-94 • AGLN010 Global Resource
Commercial-Case Conditions: $T_J = 70^\circ\text{C}$, $V_{CC} = 1.14\text{ V}$

Parameter	Description	Std.		Units
		Min. ¹	Max. ²	
t_{RCKL}	Input Low Delay for Global Clock	1.71	2.09	ns
t_{RCKH}	Input High Delay for Global Clock	1.78	2.31	ns
$t_{RCKMPWH}$	Minimum Pulse Width High for Global Clock	1.40		ns
$t_{RCKMPWL}$	Minimum Pulse Width Low for Global Clock	1.65		ns
t_{RCKSW}	Maximum Skew for Global Clock		0.53	ns

Notes:

1. Value reflects minimum load. The delay is measured from the CCC output to the clock pin of a sequential element, located in a lightly loaded row (single element is connected to the global net).
2. Value reflects maximum load. The delay is measured on the clock pin of the farthest sequential element, located in a fully loaded row (all available flip-flops are connected to the global net in the row).
3. For specific junction temperature and voltage supply levels, refer to Table 2-7 on page 2-7 for derating values.

Table 2-95 • AGLN015 Global Resource
Commercial-Case Conditions: $T_J = 70^\circ\text{C}$, $V_{CC} = 1.14\text{ V}$

Parameter	Description	Std.		Units
		Min. ¹	Max. ²	
t_{RCKL}	Input Low Delay for Global Clock	1.81	2.26	ns
t_{RCKH}	Input High Delay for Global Clock	1.90	2.51	ns
$t_{RCKMPWH}$	Minimum Pulse Width High for Global Clock	1.40		ns
$t_{RCKMPWL}$	Minimum Pulse Width Low for Global Clock	1.65		ns
t_{RCKSW}	Maximum Skew for Global Clock		0.61	ns

Notes:

1. Value reflects minimum load. The delay is measured from the CCC output to the clock pin of a sequential element, located in a lightly loaded row (single element is connected to the global net).
2. Value reflects maximum load. The delay is measured on the clock pin of the farthest sequential element, located in a fully loaded row (all available flip-flops are connected to the global net in the row).
3. For specific junction temperature and voltage supply levels, refer to Table 2-7 on page 2-7 for derating values.

Embedded FlashROM Characteristics

Figure 2-41 • Timing Diagram

Timing Characteristics

1.5 V DC Core Voltage

Table 2-108 • Embedded FlashROM Access Time

Worst Commercial-Case Conditions: $T_J = 70^\circ\text{C}$, $V_{CC} = 1.425\text{ V}$

Parameter	Description	Std.	Units
t_{SU}	Address Setup Time	0.57	ns
t_{HOLD}	Address Hold Time	0.00	ns
t_{CK2Q}	Clock to Out	20.90	ns
F_{MAX}	Maximum Clock Frequency	15	MHz

1.2 V DC Core Voltage

Table 2-109 • Embedded FlashROM Access Time

Worst Commercial-Case Conditions: $T_J = 70^\circ\text{C}$, $V_{CC} = 1.14\text{ V}$

Parameter	Description	Std.	Units
t_{SU}	Address Setup Time	0.59	ns
t_{HOLD}	Address Hold Time	0.00	ns
t_{CK2Q}	Clock to Out	35.74	ns
F_{MAX}	Maximum Clock Frequency	10	MHz

UC81

Revision	Changes	Page
Revision 10 (continued)	The following tables were updated with current available information. The equivalent software default drive strength option was added. Table 2-21 • Summary of Maximum and Minimum DC Input and Output Levels Table 2-25 • Summary of I/O Timing Characteristics—Software Default Settings Table 2-26 • Summary of I/O Timing Characteristics—Software Default Settings Table 2-28 • I/O Output Buffer Maximum Resistances ¹ Table 2-29 • I/O Weak Pull-Up/Pull-Down Resistances Table 2-30 • I/O Short Currents IOSH/IOSL Timing tables in the "Single-Ended I/O Characteristics" section, including new tables for 3.3 V and 1.2 V LVCMOS wide range. Table 2-40 • Minimum and Maximum DC Input and Output Levels for LVCMOS 3.3 V Wide Range Table 2-63 • Minimum and Maximum DC Input and Output Levels Table 2-67 • Minimum and Maximum DC Input and Output Levels (new)	2-19 through 2-40
	The formulas in the notes to Table 2-29 • I/O Weak Pull-Up/Pull-Down Resistances were revised (SAR 21348).	2-24
	The text introducing Table 2-31 • Duration of Short Circuit Event before Failure was revised to state six months at 100° instead of three months at 110° for reliability concerns. The row for 110° was removed from the table.	2-25
	The following sentence was deleted from the "2.5 V LVCMOS" section (SAR 24916): "It uses a 5-V tolerant input buffer and push-pull output buffer."	2-32
	The F _{DDRIMAX} and F _{DDOMAX} values were added to tables in the "DDR Module Specifications" section (SAR 23919). A note was added stating that DDR is not supported for AGLN010, AGLN015, and AGLN020.	2-51
	Tables in the "Global Tree Timing Characteristics" section were updated with new information available.	2-64
	Table 2-100 • IGLOO nano CCC/PLL Specification and Table 2-101 • IGLOO nano CCC/PLL Specification were revised (SAR 79390).	2-70, 2-71
	Tables in the SRAM "Timing Characteristics" section and FIFO "Timing Characteristics" section were updated with new information available.	2-77, 2-85
	Table 3-3 • TRST and TCK Pull-Down Recommendations is new.	3-4
	A note was added to the "CS81" pin tables for AGLN060, AGLN060Z, AGLN125, AGLN125Z, AGLN250, and AGLN250Z indicating that pins F1 and F2 must be grounded (SAR 25007).	4-9, through 4-14
	A note was added to the "CS81" and "VQ100" pin tables for AGLN060 and AGLN060Z stating that bus hold is not available for pin H7 or pin 45 (SAR 24079).	4-9, 4-24
	The AGLN250 function for pin C8 in the "CS81" table was revised (SAR 22134).	4-13

Microsemi Corporation (Nasdaq: MSCC) offers a comprehensive portfolio of semiconductor and system solutions for communications, defense & security, aerospace and industrial markets. Products include high-performance and radiation-hardened analog mixed-signal integrated circuits, FPGAs, SoCs and ASICs; power management products; timing and synchronization devices and precise time solutions, setting the world's standard for time; voice processing devices; RF solutions; discrete components; security technologies and scalable anti-tamper products; Ethernet solutions; Power-over-Ethernet ICs and midspans; as well as custom design capabilities and services. Microsemi is headquartered in Aliso Viejo, Calif., and has approximately 3,600 employees globally. Learn more at www.microsemi.com.

Microsemi makes no warranty, representation, or guarantee regarding the information contained herein or the suitability of its products and services for any particular purpose, nor does Microsemi assume any liability whatsoever arising out of the application or use of any product or circuit. The products sold hereunder and any other products sold by Microsemi have been subject to limited testing and should not be used in conjunction with mission-critical equipment or applications. Any performance specifications are believed to be reliable but are not verified, and Buyer must conduct and complete all performance and other testing of the products, alone and together with, or installed in, any end-products. Buyer shall not rely on any data and performance specifications or parameters provided by Microsemi. It is the Buyer's responsibility to independently determine suitability of any products and to test and verify the same. The information provided by Microsemi hereunder is provided "as is, where is" and with all faults, and the entire risk associated with such information is entirely with the Buyer. Microsemi does not grant, explicitly or implicitly, to any party any patent rights, licenses, or any other IP rights, whether with regard to such information itself or anything described by such information. Information provided in this document is proprietary to Microsemi, and Microsemi reserves the right to make any changes to the information in this document or to any products and services at any time without notice.
