
Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Obsolete
Core Processor	eZ8
Core Size	8-Bit
Speed	20MHz
Connectivity	I²C, IrDA, SPI, UART/USART
Peripherals	Brown-out Detect/Reset, DMA, POR, PWM, WDT
Number of I/O	31
Program Memory Size	32KB (32K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	2K x 8
Voltage - Supply (Vcc/Vdd)	3V ~ 3.6V
Data Converters	A/D 8x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 105°C (TA)
Mounting Type	Surface Mount
Package / Case	44-LCC (J-Lead)
Supplier Device Package	-
Purchase URL	https://www.e-xfl.com/product-detail/zilog/z8f3201vn020ec00tr

Signal Descriptions

Table 2 describes the Z8F640x family signals. Refer to the section **Pin Configurations on page 7** to determine the signals available for the specific package styles.

Table 2. Signal Descriptions

Signal Mnemonic	I/O	Description
General-Purpose I/O Ports A-H		
PA[7:0]	I/O	Port A[7:0]. These pins are used for general-purpose I/O.
PB[7:0]	I/O	Port B[7:0]. These pins are used for general-purpose I/O.
PC[7:0]	I/O	Port C[7:0]. These pins are used for general-purpose I/O.
PD[7:0]	I/O	Port D[7:0]. These pins are used for general-purpose I/O.
PE[7:0]	I/O	Port E[7:0]. These pins are used for general-purpose I/O.
PF[7:0]	I/O	Port F[7:0]. These pins are used for general-purpose I/O.
PG[7:0]	I/O	Port G[7:0]. These pins are used for general-purpose I/O.
PH[3:0]	I/O	Port H[3:0]. These pins are used for general-purpose I/O.
I^2C Controller		
SCL	O	Serial Clock. This is the output clock for the I^2C. This pin is multiplexed with a general-purpose I/O pin. When the general-purpose I/O pin is configured for alternate function to enable the SCL function, this pin is open-drain.
SDA	I/O	Serial Data. This open-drain pin is used to transfer data between the I^2C and a slave. This pin is multiplexed with a general-purpose I/O pin. When the general-purpose I/O pin is configured for alternate function to enable the SDA function, this pin is open-drain.
SPI Controller		
$\overline{SS}$	I/O	Slave Select. This signal can be an output or an input. If the Z8 Encore! is the SPI master, this pin may be configured as the Slave Select output. If the Z8 Encore! is the SPI slave, this pin is the input slave select. It is multiplexed with a general-purpose I/O pin.
SCK	I/O	SPI Serial Clock. The SPI master supplies this pin. If the Z8 Encore! is the SPI master, this pin is an output. If the Z8 Encore! is the SPI slave, this pin is an input. It is multiplexed with a general-purpose I/O pin.
MOSI	I/O	Master Out Slave In. This signal is the data output from the SPI master device and the data input to the SPI slave device. It is multiplexed with a general-purpose I/O pin.
MISO	I/O	Master In Slave Out. This pin is the data input to the SPI master device and the data output from the SPI slave device. It is multiplexed with a general-purpose I/O pin.
