Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Absolute Maximum Ratings

Absolute maximum ratings define the maximum operating conditions for Stratix V devices. The values are based on experiments conducted with the devices and theoretical modeling of breakdown and damage mechanisms. The functional operation of the device is not implied for these conditions.

Conditions other than those listed in Table 3 may cause permanent damage to the device. Additionally, device operation at the absolute maximum ratings for extended periods of time may have adverse effects on the device.

Notes to Table 28:

- (1) Speed grades shown refer to the PMA Speed Grade in the device ordering code. The maximum data rate could be restricted by the Core/PCS speed grade. Contact your Altera Sales Representative for the maximum data rate specifications in each speed grade combination offered. For more information about device ordering codes, refer to the *Stratix V Device Overview*.
- (2) The reference clock common mode voltage is equal to the VCCR_GXB power supply level.
- (3) The device cannot tolerate prolonged operation at this absolute maximum.
- (4) The differential eye opening specification at the receiver input pins assumes that receiver equalization is disabled. If you enable receiver equalization, the receiver circuitry can tolerate a lower minimum eye opening, depending on the equalization level.
- (5) Refer to Figure 5 for the GT channel AC gain curves. The total effective AC gain is the AC gain minus the DC gain.
- (6) Refer to Figure 6 for the GT channel DC gain curves.
- (7) CFP2 optical modules require the host interface to have the receiver data pins differentially terminated with 100 Ω. The internal OCT feature is available after the Stratix V FPGA configuration is completed. Altera recommends that FPGA configuration is completed before inserting the optical module. Otherwise, minimize unnecessary removal and insertion with unconfigured devices.
- (8) Specifications for this parameter are the same as for Stratix V GX and GS devices. See Table 23 for specifications.
- (9) t_{LTR} is the time required for the receive CDR to lock to the input reference clock frequency after coming out of reset.
- (10) t_{LTD} is time required for the receiver CDR to start recovering valid data after the $rx_is_lockedto\ data$ signal goes high.
- (11) t_{LTD_manual} is the time required for the receiver CDR to start recovering valid data after the $rx_is_lockedto\ data$ signal goes high when the CDR is functioning in the manual mode.
- (12) $t_{LTR_LTD_manual}$ is the time the receiver CDR must be kept in lock to reference (LTR) mode after the $rx_is_lockedto\ ref$ signal goes high when the CDR is functioning in the manual mode.
- (13) $tp11_powerdown$ is the PLL powerdown minimum pulse width.
- (14) $tp11_lock$ is the time required for the transmitter CMU/ATX PLL to lock to the input reference clock frequency after coming out of reset.
- (15) To calculate the REFCLK rms phase jitter requirement for PCIe at reference clock frequencies other than 100 MHz, use the following formula:
REFCLK rms phase jitter at f(MHz) = REFCLK rms phase jitter at 100 MHz × 100/f.
- (16) The maximum peak to peak differential input voltage V_{ID} after device configuration is equal to $4 \times (\text{absolute } V_{MAX} \text{ for receiver pin} - V_{ICM})$.
- (17) For ES devices, RREF is 2000 Ω ±1%.
- (18) To calculate the REFCLK phase noise requirement at frequencies other than 622 MHz, use the following formula: REFCLK phase noise at f(MHz) = REFCLK phase noise at 622 MHz + 20*log(f/622).
- (19) SFP/+ optical modules require the host interface to have RD+/- differentially terminated with 100 Ω. The internal OCT feature is available after the Stratix V FPGA configuration is completed. Altera recommends that FPGA configuration is completed before inserting the optical module. Otherwise, minimize unnecessary removal and insertion with unconfigured devices.
- (20) Refer to Figure 4.
- (21) For oversampling design to support data rates less than the minimum specification, the CDR needs to be in LTR mode only.
- (22) This supply follows VCCR_GXB for both GX and GT channels.
- (23) When you use fPLL as a TXPLL of the transceiver.

Figure 6 shows the Stratix V DC gain curves for GT channels.

Table 31. PLL Specifications for Stratix V Devices (Part 3 of 3)

Symbol	Parameter	Min	Typ	Max	Unit
f_{RES}	Resolution of VCO frequency ($f_{INPFD} = 100$ MHz)	390625	5.96	0.023	Hz

Notes to Table 31:

- (1) This specification is limited in the Quartus II software by the I/O maximum frequency. The maximum I/O frequency is different for each I/O standard.
- (2) This specification is limited by the lower of the two: I/O f_{MAX} or f_{OUT} of the PLL.
- (3) A high input jitter directly affects the PLL output jitter. To have low PLL output clock jitter, you must provide a clean clock source < 120 ps.
- (4) f_{REF} is f_{IN}/N when $N = 1$.
- (5) Peak-to-peak jitter with a probability level of 10^{-12} (14 sigma, 99.9999999974404% confidence level). The output jitter specification applies to the intrinsic jitter of the PLL, when an input jitter of 30 ps is applied. The external memory interface clock output jitter specifications use a different measurement method and are available in Table 44 on page 52.
- (6) The cascaded PLL specification is only applicable with the following condition:
 - a. Upstream PLL: $0.59\text{MHz} \leq \text{Upstream PLL BW} < 1$ MHz
 - b. Downstream PLL: Downstream PLL BW > 2 MHz
- (7) High bandwidth PLL settings are not supported in external feedback mode.
- (8) The external memory interface clock output jitter specifications use a different measurement method, which is available in Table 42 on page 50.
- (9) The VCO frequency reported by the Quartus II software in the PLL Usage Summary section of the compilation report takes into consideration the VCO post-scale counter K value. Therefore, if the counter K has a value of 2, the frequency reported can be lower than the f_{VCO} specification.
- (10) This specification only covers fractional PLL for low bandwidth. The f_{VCO} for fractional value range 0.05 - 0.95 must be ≥ 1000 MHz, while f_{VCO} for fractional value range 0.20 - 0.80 must be ≥ 1200 MHz.
- (11) This specification only covered fractional PLL for low bandwidth. The f_{VCO} for fractional value range 0.05-0.95 must be ≥ 1000 MHz.
- (12) This specification only covered fractional PLL for low bandwidth. The f_{VCO} for fractional value range 0.20-0.80 must be ≥ 1200 MHz.

Notes to Table 36:

- (1) When J = 3 to 10, use the serializer/deserializer (SERDES) block.
- (2) When J = 1 or 2, bypass the SERDES block.
- (3) This only applies to DPA and soft-CDR modes.
- (4) Clock Boost Factor (W) is the ratio between the input data rate to the input clock rate.
- (5) This is achieved by using the **LVDS** clock network.
- (6) The minimum specification depends on the clock source (for example, the PLL and clock pin) and the clock routing resource (global, regional, or local) that you use. The I/O differential buffer and input register do not have a minimum toggle rate.
- (7) The maximum ideal frequency is the SERDES factor (J) x the PLL maximum output frequency (f_{OUT}) provided you can close the design timing and the signal integrity simulation is clean.
- (8) You can estimate the achievable maximum data rate for non-DPA mode by performing link timing closure analysis. You must consider the board skew margin, transmitter delay margin, and receiver sampling margin to determine the maximum data rate supported.
- (9) If the receiver with DPA enabled and transmitter are using shared PLLs, the minimum data rate is 150 Mbps.
- (10) You must calculate the leftover timing margin in the receiver by performing link timing closure analysis. You must consider the board skew margin, transmitter channel-to-channel skew, and receiver sampling margin to determine leftover timing margin.
- (11) The F_{MAX} specification is based on the fast clock used for serial data. The interface F_{MAX} is also dependent on the parallel clock domain which is design-dependent and requires timing analysis.
- (12) Stratix V RX LVDS will need DPA. For Stratix V TX LVDS, the receiver side component must have DPA.
- (13) Stratix V LVDS serialization and de-serialization factor needs to be x4 and above.
- (14) Requires package skew compensation with PCB trace length.
- (15) Do not mix single-ended I/O buffer within LVDS I/O bank.
- (16) Chip-to-chip communication only with a maximum load of 5 pF.
- (17) When using True LVDS RX channels for emulated LVDS TX channel, only serialization factors 1 and 2 are supported.

Notes to Table 50:

- (1) Use these timing parameters when the decompression and design security features are disabled.
- (2) This value is applicable if you do not delay configuration by extending the nCONFIG or nSTATUS low pulse width.
- (3) This value is applicable if you do not delay configuration by externally holding the nSTATUS low.
- (4) The minimum and maximum numbers apply only if you chose the internal oscillator as the clock source for initializing the device.
- (5) To enable the CLKUSR pin as the initialization clock source and to obtain the maximum frequency specification on these pins, refer to the Initialization section of the “Configuration, Design Security, and Remote System Upgrades in Stratix V Devices” chapter.
- (6) If nSTATUS is monitored, follow the t_{ST2CK} specification. If nSTATUS is not monitored, follow the t_{CF2CK} specification.
