

Welcome to **E-XFL.COM**

Understanding <u>Embedded - FPGAs (Field Programmable Gate Array)</u>

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details	
Product Status	Obsolete
Number of LABs/CLBs	185000
Number of Logic Elements/Cells	490000
Total RAM Bits	41984000
Number of I/O	432
Number of Gates	-
Voltage - Supply	0.87V ~ 0.93V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	1517-FBGA (40x40)
Supplier Device Package	1517-FBGA (40x40)
Purchase URL	https://www.e-xfl.com/product-detail/intel/5sgxmb5r1f40c2n

Email: info@E-XFL.COM

Address: Room A, 16/F, Full Win Commercial Centre, 573 Nathan Road, Mongkok, Hong Kong

Page 2 Electrical Characteristics

Table 1. Stratix V GX and GS Commercial and Industrial Speed Grade Offering (1), (2), (3) (Part 2 of 2)

Transceiver Speed	Core Speed Grade										
Grade	C1	C2, C2L	C3	C4	12, 12L	13, 13L	I3YY	14			
3 GX channel—8.5 Gbps	_	Yes	Yes	Yes	_	Yes	Yes ⁽⁴⁾	Yes			

Notes to Table 1:

- (1) C = Commercial temperature grade; I = Industrial temperature grade.
- (2) Lower number refers to faster speed grade.
- (3) C2L, I2L, and I3L speed grades are for low-power devices.
- (4) I3YY speed grades can achieve up to 10.3125 Gbps.

Table 2 lists the industrial and commercial speed grades for the Stratix V GT devices.

Table 2. Stratix V GT Commercial and Industrial Speed Grade Offering (1), (2)

Transacius Crad Crado	Core Speed Grade							
Transceiver Speed Grade	C1	C2	12	13				
2 GX channel—12.5 Gbps GT channel—28.05 Gbps	Yes	Yes	_	_				
3 GX channel—12.5 Gbps GT channel—25.78 Gbps	Yes	Yes	Yes	Yes				

Notes to Table 2:

- (1) C = Commercial temperature grade; I = Industrial temperature grade.
- (2) Lower number refers to faster speed grade.

Absolute Maximum Ratings

Absolute maximum ratings define the maximum operating conditions for Stratix V devices. The values are based on experiments conducted with the devices and theoretical modeling of breakdown and damage mechanisms. The functional operation of the device is not implied for these conditions.

Conditions other than those listed in Table 3 may cause permanent damage to the device. Additionally, device operation at the absolute maximum ratings for extended periods of time may have adverse effects on the device.

Table 3. Absolute Maximum Ratings for Stratix V Devices (Part 1 of 2)

Symbol	Description	Minimum	Maximum	Unit
V _{CC}	Power supply for core voltage and periphery circuitry	-0.5	1.35	V
V _{CCPT}	Power supply for programmable power technology	-0.5	1.8	V
V _{CCPGM}	Power supply for configuration pins	-0.5	3.9	V
V _{CC_AUX}	Auxiliary supply for the programmable power technology	-0.5	3.4	V
V _{CCBAT}	Battery back-up power supply for design security volatile key register	-0.5	3.9	V
V _{CCPD}	I/O pre-driver power supply	-0.5	3.9	V
V _{CCIO}	I/O power supply	-0.5	3.9	V

Page 12 Electrical Characteristics

Table 13. OCT Variation after Power-Up Calibration for Stratix V Devices (Part 2 of 2) (1)

Symbol	Description	V _{CCIO} (V)	Typical	Unit	
		3.0	0.189		
		2.5	0.208		
dR/dT	OCT variation with temperature without recalibration	1.8	0.266	%/°C	
	Willout recalibration	1.5	0.273	1	
		1.2	0.317		

Note to Table 13:

(1) Valid for a V_{CCIO} range of $\pm 5\%$ and a temperature range of 0° to $85^\circ\text{C}.$

Pin Capacitance

Table 14 lists the Stratix V device family pin capacitance.

Table 14. Pin Capacitance for Stratix V Devices

Symbol	Description	Value	Unit
C _{IOTB}	Input capacitance on the top and bottom I/O pins	6	pF
C _{IOLR}	Input capacitance on the left and right I/O pins	6	pF
C _{OUTFB}	Input capacitance on dual-purpose clock output and feedback pins	6	pF

Hot Socketing

Table 15 lists the hot socketing specifications for Stratix V devices.

Table 15. Hot Socketing Specifications for Stratix V Devices

Symbol	Description	Maximum
I _{IOPIN (DC)}	DC current per I/O pin	300 μΑ
I _{IOPIN (AC)}	AC current per I/O pin	8 mA ⁽¹⁾
I _{XCVR-TX (DC)}	DC current per transceiver transmitter pin	100 mA
I _{XCVR-RX (DC)}	DC current per transceiver receiver pin	50 mA

Note to Table 15:

(1) The I/O ramp rate is 10 ns or more. For ramp rates faster than 10 ns, $|I_{IOPIN}| = C dv/dt$, in which C is the I/O pin capacitance and dv/dt is the slew rate.

Page 18 Switching Characteristics

Switching Characteristics

This section provides performance characteristics of the Stratix V core and periphery blocks.

These characteristics can be designated as Preliminary or Final.

- Preliminary characteristics are created using simulation results, process data, and other known parameters. The title of these tables show the designation as "Preliminary."
- Final numbers are based on actual silicon characterization and testing. The numbers reflect the actual performance of the device under worst-case silicon process, voltage, and junction temperature conditions. There are no designations on finalized tables.

Transceiver Performance Specifications

This section describes transceiver performance specifications.

Table 23 lists the Stratix V GX and GS transceiver specifications.

Table 23. Transceiver Specifications for Stratix V GX and GS Devices (1) (Part 1 of 7)

Switching Characteristics Page 27

Table 26 shows the approximate maximum data rate using the 10G PCS.

Table 26. Stratix V 10G PCS Approximate Maximum Data Rate (1)

Mode ⁽²⁾	Transceiver	PMA Width	64	40	40	40	32	32				
Widue (2)	Speed Grade	PCS Width	64	66/67	50	40	64/66/67	32				
	1	C1, C2, C2L, I2, I2L core speed grade	14.1	14.1	10.69	14.1	13.6	13.6				
	2	C1, C2, C2L, I2, I2L core speed grade	12.5	12.5	10.69	12.5	12.5	12.5				
2		C3, I3, I3L core speed grade	12.5	12.5	10.69	12.5	10.88	10.88				
FIFO or Register		C1, C2, C2L, I2, I2L core speed grade										
	3	C3, I3, I3L core speed grade	8.5 Gbps									
3		C4, I4 core speed grade										
		I3YY core speed grade	10.3125 Gbps									

Notes to Table 26:

⁽¹⁾ The maximum data rate is in Gbps.

⁽²⁾ The Phase Compensation FIFO can be configured in FIFO mode or register mode. In the FIFO mode, the pointers are not fixed, and the latency can vary. In the register mode the pointers are fixed for low latency.

Switching Characteristics Page 41

Table 31. PLL Specifications for Stratix V Devices (Part 3 of 3)

	Symbol	Parameter	Min	Тур	Max	Unit
f	RES	Resolution of VCO frequency (f _{INPFD} = 100 MHz)	390625	5.96	0.023	Hz

Notes to Table 31:

- (1) This specification is limited in the Quartus II software by the I/O maximum frequency. The maximum I/O frequency is different for each I/O standard.
- (2) This specification is limited by the lower of the two: I/O f_{MAX} or f_{OUT} of the PLL.
- (3) A high input jitter directly affects the PLL output jitter. To have low PLL output clock jitter, you must provide a clean clock source < 120 ps.
- (4) f_{REF} is fIN/N when N = 1.
- (5) Peak-to-peak jitter with a probability level of 10⁻¹² (14 sigma, 99.9999999974404% confidence level). The output jitter specification applies to the intrinsic jitter of the PLL, when an input jitter of 30 ps is applied. The external memory interface clock output jitter specifications use a different measurement method and are available in Table 44 on page 52.
- (6) The cascaded PLL specification is only applicable with the following condition:
 - a. Upstream PLL: 0.59Mhz \le Upstream PLL BW < 1 MHz
 - b. Downstream PLL: Downstream PLL BW > 2 MHz
- (7) High bandwidth PLL settings are not supported in external feedback mode.
- (8) The external memory interface clock output jitter specifications use a different measurement method, which is available in Table 42 on page 50.
- (9) The VCO frequency reported by the Quartus II software in the PLL Usage Summary section of the compilation report takes into consideration the VCO post-scale counter K value. Therefore, if the counter K has a value of 2, the frequency reported can be lower than the f_{VCO} specification.
- (10) This specification only covers fractional PLL for low bandwidth. The f_{VCO} for fractional value range 0.05 0.95 must be \geq 1000 MHz, while f_{VCO} for fractional value range 0.20 0.80 must be \geq 1200 MHz.
- (11) This specification only covered fractional PLL for low bandwidth. The f_{VCO} for fractional value range 0.05-0.95 must be ≥ 1000 MHz.
- (12) This specification only covered fractional PLL for low bandwidth. The f_{VCO} for fractional value range 0.20-0.80 must be ≥ 1200 MHz.

DSP Block Specifications

Table 32 lists the Stratix V DSP block performance specifications.

Notes to Table 36:

- (1) When J = 3 to 10, use the serializer/deserializer (SERDES) block.
- (2) When J = 1 or 2, bypass the SERDES block.
- (3) This only applies to DPA and soft-CDR modes.
- (4) Clock Boost Factor (W) is the ratio between the input data rate to the input clock rate.
- (5) This is achieved by using the **LVDS** clock network.
- (6) The minimum specification depends on the clock source (for example, the PLL and clock pin) and the clock routing resource (global, regional, or local) that you use. The I/O differential buffer and input register do not have a minimum toggle rate.
- (7) The maximum ideal frequency is the SERDES factor (J) x the PLL maximum output frequency (fOUT) provided you can close the design timing and the signal integrity simulation is clean.
- (8) You can estimate the achievable maximum data rate for non-DPA mode by performing link timing closure analysis. You must consider the board skew margin, transmitter delay margin, and receiver sampling margin to determine the maximum data rate supported.
- (9) If the receiver with DPA enabled and transmitter are using shared PLLs, the minimum data rate is 150 Mbps.
- (10) You must calculate the leftover timing margin in the receiver by performing link timing closure analysis. You must consider the board skew margin, transmitter channel-to-channel skew, and receiver sampling margin to determine leftover timing margin.
- (11) The F_{MAX} specification is based on the fast clock used for serial data. The interface F_{MAX} is also dependent on the parallel clock domain which is design-dependent and requires timing analysis.
- (12) Stratix V RX LVDS will need DPA. For Stratix V TX LVDS, the receiver side component must have DPA.
- (13) Stratix V LVDS serialization and de-serialization factor needs to be x4 and above.
- (14) Requires package skew compensation with PCB trace length.
- (15) Do not mix single-ended I/O buffer within LVDS I/O bank.
- (16) Chip-to-chip communication only with a maximum load of 5 pF.
- (17) When using True LVDS RX channels for emulated LVDS TX channel, only serialization factors 1 and 2 are supported.

Page 48 Switching Characteristics

Figure 7 shows the dynamic phase alignment (DPA) lock time specifications with the DPA PLL calibration option enabled.

Figure 7. DPA Lock Time Specification with DPA PLL Calibration Enabled

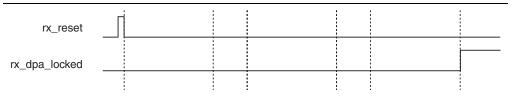

Table 37 lists the DPA lock time specifications for Stratix V devices.

Table 37. DPA Lock Time Specifications for Stratix V GX Devices Only (1), (2), (3)

Standard	Training Pattern	Number of Data Transitions in One Repetition of the Training Pattern	Number of Repetitions per 256 Data Transitions ⁽⁴⁾	Maximum
SPI-4	00000000001111111111	2	128	640 data transitions
Parallel Rapid I/O	00001111	2	128	640 data transitions
Taraner Hapiu 1/0	10010000	4	64	640 data transitions
Miscellaneous	10101010	8	32	640 data transitions
IVIISOGIIAIIGUUS	01010101	8	32	640 data transitions

Notes to Table 37:

- (1) The DPA lock time is for one channel.
- (2) One data transition is defined as a 0-to-1 or 1-to-0 transition.
- (3) The DPA lock time stated in this table applies to both commercial and industrial grade.
- (4) This is the number of repetitions for the stated training pattern to achieve the 256 data transitions.

Figure 8 shows the **LVDS** soft-clock data recovery (CDR)/DPA sinusoidal jitter tolerance specification for a data rate \geq 1.25 Gbps. Table 38 lists the **LVDS** soft-CDR/DPA sinusoidal jitter tolerance specification for a data rate \geq 1.25 Gbps.

Figure 8. LVDS Soft-CDR/DPA Sinusoidal Jitter Tolerance Specification for a Data Rate \geq 1.25 Gbps

Table 46.	JTAG Timino	Parameters ar	nd Values	for Stratix V Devices
-----------	-------------	---------------	-----------	-----------------------

Symbol	Description	Min	Max	Unit
t _{JPH}	JTAG port hold time	5	_	ns
t _{JPCO}	JTAG port clock to output	_	11 ⁽¹⁾	ns
t _{JPZX}	JTAG port high impedance to valid output	_	14 ⁽¹⁾	ns
t _{JPXZ}	JTAG port valid output to high impedance	_	14 ⁽¹⁾	ns

Notes to Table 46:

- (1) A 1 ns adder is required for each V_{CCIO} voltage step down from 3.0 V. For example, t_{JPCO} = 12 ns if V_{CCIO} of the TDO I/O bank = 2.5 V, or 13 ns if it equals 1.8 V.
- (2) The minimum TCK clock period is 167 ns if VCCBAT is within the range 1.2V-1.5V when you perform the volatile key programming.

Raw Binary File Size

For the POR delay specification, refer to the "POR Delay Specification" section of the "Configuration, Design Security, and Remote System Upgrades in Stratix V Devices".

Table 47 lists the uncompressed raw binary file (.rbf) sizes for Stratix V devices.

Table 47. Uncompressed .rbf Sizes for Stratix V Devices

Family	Device	Package	Configuration .rbf Size (bits)	IOCSR .rbf Size (bits) (4), (5)

	5SGSD8	_	293,441,888	565,528

Page 56 Configuration Specification

Table 49. DCLK-to-DATA[] Ratio (1) (Part 2 of 2)

Configuration Scheme	Decompression	Design Security	DCLK-to-DATA[] Ratio
	Disabled	Disabled	1
FPP ×32	Disabled	Enabled	4
1FF ×32	Enabled	Disabled	8
	Enabled	Enabled	8

Note to Table 49:

(1) Depending on the DCLK-to-DATA [] ratio, the host must send a DCLK frequency that is r times the data rate in bytes per second (Bps), or words per second (Wps). For example, in FPP ×16 when the DCLK-to-DATA [] ratio is 2, the DCLK frequency must be 2 times the data rate in Wps. Stratix V devices use the additional clock cycles to decrypt and decompress the configuration data.

If the DCLK-to-DATA[] ratio is greater than 1, at the end of configuration, you can only stop the DCLK (DCLK-to-DATA[] ratio -1) clock cycles after the last data is latched into the Stratix V device.

Figure 11 shows the configuration interface connections between the Stratix V device and a MAX II or MAX V device for single device configuration.

Figure 11. Single Device FPP Configuration Using an External Host

Notes to Figure 11:

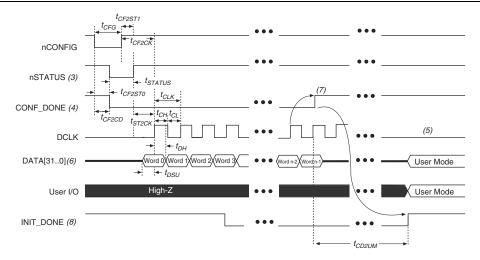

- (1) Connect the resistor to a supply that provides an acceptable input signal for the Stratix V device. V_{CCPGM} must be high enough to meet the V_{IH} specification of the I/O on the device and the external host. Altera recommends powering up all configuration system I/Os with V_{CCPGM}.
- (2) You can leave the nceo pin unconnected or use it as a user I/O pin when it does not feed another device's nce pin.
- (3) The MSEL pin settings vary for different data width, configuration voltage standards, and POR delay. To connect MSEL, refer to the MSEL Pin Settings section of the "Configuration, Design Security, and Remote System Upgrades in Stratix V Devices" chapter.
- (4) If you use FPP $\times 8$, use DATA [7..0]. If you use FPP $\times 16$, use DATA [15..0].

Configuration Specification Page 57

FPP Configuration Timing when DCLK-to-DATA [] = 1

Figure 12 shows the timing waveform for FPP configuration when using a MAX II or MAX V device as an external host. This waveform shows timing when the DCLK-to-DATA[] ratio is 1.

Figure 12. FPP Configuration Timing Waveform When the DCLK-to-DATA[] Ratio is 1 (1), (2)

Notes to Figure 12:

- (1) Use this timing waveform when the DCLK-to-DATA[] ratio is 1.
- (2) The beginning of this waveform shows the device in user mode. In user mode, nCONFIG, nSTATUS, and CONF_DONE are at logic-high levels. When nCONFIG is pulled low, a reconfiguration cycle begins.
- (3) After power-up, the Stratix V device holds nSTATUS low for the time of the POR delay.
- (4) After power-up, before and during configuration, CONF DONE is low.
- (5) Do not leave DCLK floating after configuration. DCLK is ignored after configuration is complete. It can toggle high or low if required.
- (6) For FPP ×16, use DATA [15..0]. For FPP ×8, use DATA [7..0]. DATA [31..0] are available as a user I/O pin after configuration. The state of this pin depends on the dual-purpose pin settings.
- (7) To ensure a successful configuration, send the entire configuration data to the Stratix V device. CONF_DONE is released high when the Stratix V device receives all the configuration data successfully. After CONF_DONE goes high, send two additional falling edges on DCLK to begin initialization and enter user mode.
- (8) After the option bit to enable the <code>INIT_DONE</code> pin is configured into the device, the <code>INIT_DONE</code> goes low.

Glossary Page 67

Table 60. Glossary (Part 3 of 4)

Letter	Subject	Definitions
	SW (sampling window)	Timing Diagram—the period of time during which the data must be valid in order to capture it correctly. The setup and hold times determine the ideal strobe position within the sampling window, as shown: Bit Time 0.5 x TCCS RSKM Sampling Window (SW) 0.5 x TCCS
S	Single-ended voltage referenced I/O standard	The JEDEC standard for SSTL and HSTL I/O defines both the AC and DC input signal values. The AC values indicate the voltage levels at which the receiver must meet its timing specifications. The DC values indicate the voltage levels at which the final logic state of the receiver is unambiguously defined. After the receiver input has crossed the AC value, the receiver changes to the new logic state. The new logic state is then maintained as long as the input stays beyond the DC threshold. This approach is intended to provide predictable receiver timing in the presence of input waveform ringing: Single-Ended Voltage Referenced I/O Standard VIHACO VIHACO VILLOCO V
	t _C	High-speed receiver and transmitter input and output clock period.
	TCCS (channel- to-channel-skew)	The timing difference between the fastest and slowest output edges, including t_{CO} variation and clock skew, across channels driven by the same PLL. The clock is included in the TCCS measurement (refer to the <i>Timing Diagram</i> figure under SW in this table).
	t _{DUTY}	High-speed I/O block—Duty cycle on the high-speed transmitter output clock.
Т		Timing Unit Interval (TUI) The timing budget allowed for skew, propagation delays, and the data sampling window. (TUI = $1/(\text{receiver input clock frequency multiplication factor}) = t_c/w)$
	t _{FALL}	Signal high-to-low transition time (80-20%)
	t _{INCCJ}	Cycle-to-cycle jitter tolerance on the PLL clock input.
	t _{OUTPJ_IO}	Period jitter on the general purpose I/O driven by a PLL.
	t _{OUTPJ_DC}	Period jitter on the dedicated clock output driven by a PLL.
	t _{RISE}	Signal low-to-high transition time (20-80%)
U	_	_

Page 68 Glossary

Table 60. Glossary (Part 4 of 4)

Letter	Subject	Definitions
	V _{CM(DC)}	DC common mode input voltage.
	V _{ICM}	Input common mode voltage—The common mode of the differential signal at the receiver.
	V _{ID}	Input differential voltage swing—The difference in voltage between the positive and complementary conductors of a differential transmission at the receiver.
	V _{DIF(AC)}	AC differential input voltage—Minimum AC input differential voltage required for switching.
	V _{DIF(DC)}	DC differential input voltage— Minimum DC input differential voltage required for switching.
	V _{IH}	Voltage input high—The minimum positive voltage applied to the input which is accepted by the device as a logic high.
	V _{IH(AC)}	High-level AC input voltage
	V _{IH(DC)}	High-level DC input voltage
V	V _{IL}	Voltage input low—The maximum positive voltage applied to the input which is accepted by the device as a logic low.
	V _{IL(AC)}	Low-level AC input voltage
	V _{IL(DC)}	Low-level DC input voltage
	V _{OCM}	Output common mode voltage—The common mode of the differential signal at the transmitter.
	V _{OD}	Output differential voltage swing—The difference in voltage between the positive and complementary conductors of a differential transmission at the transmitter.
	V _{SWING}	Differential input voltage
	V _X	Input differential cross point voltage
	V _{OX}	Output differential cross point voltage
W	W	High-speed I/O block—clock boost factor

Page 70 Document Revision History

Table 61. Document Revision History (Part 2 of 3)

Date	Version	Changes
		■ Added the I3YY speed grade and changed the data rates for the GX channel in Table 1.
		■ Added the I3YY speed grade to the V _{CC} description in Table 6.
		■ Added the I3YY speed grade to V _{CCHIP_L} , V _{CCHIP_R} , V _{CCHSSI_L} , and V _{CCHSSI_R} descriptions in Table 7.
		■ Added 240-Ω to Table 11.
	3.3	■ Changed CDR PPM tolerance in Table 23.
		■ Added additional max data rate for fPLL in Table 23.
		■ Added the I3YY speed grade and changed the data rates for transceiver speed grade 3 in Table 25.
		■ Added the I3YY speed grade and changed the data rates for transceiver speed grade 3 in Table 26.
		■ Changed CDR PPM tolerance in Table 28.
		■ Added additional max data rate for fPLL in Table 28.
		■ Changed the mode descriptions for MLAB and M20K in Table 33.
		■ Changed the Max value of f _{HSCLK_OUT} for the C2, C2L, I2, I2L speed grades in Table 36.
November 2014		■ Changed the frequency ranges for C1 and C2 in Table 39.
		■ Changed the .rbf file sizes for 5SGSD6 and 5SGSD8 in Table 47.
		■ Added note about nSTATUS to Table 50, Table 51, Table 54.
		■ Changed the available settings in Table 58.
		■ Changed the note in "Periphery Performance".
		■ Updated the "I/O Standard Specifications" section.
		■ Updated the "Raw Binary File Size" section.
		■ Updated the receiver voltage input range in Table 22.
		■ Updated the max frequency for the LVDS clock network in Table 36.
		■ Updated the DCLK note to Figure 11.
		■ Updated Table 23 VO _{CM} (DC Coupled) condition.
		■ Updated Table 6 and Table 7.
		■ Added the DCLK specification to Table 55.
		■ Updated the notes for Table 47.
		■ Updated the list of parameters for Table 56.
November 2013	3.2	■ Updated Table 28
November 2013	3.1	■ Updated Table 33
November 2013	3.0	■ Updated Table 23 and Table 28
October 2013	2.9	■ Updated the "Transceiver Characterization" section
		■ Updated Table 3, Table 12, Table 14, Table 19, Table 20, Table 23, Table 24, Table 28, Table 30, Table 31, Table 32, Table 33, Table 36, Table 39, Table 40, Table 41, Table 42, Table 47, Table 53, Table 58, and Table 59
October 2013	2.8	■ Added Figure 1 and Figure 3
		■ Added the "Transceiver Characterization" section
		■ Removed all "Preliminary" designations.
