Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	PIC
Core Size	8-Bit
Speed	4MHz
Connectivity	-
Peripherals	POR, WDT
Number of I/O	20
Program Memory Size	768B (512 x 12)
Program Memory Type	OTP
EEPROM Size	-
RAM Size	25 x 8
Voltage - Supply (Vcc/Vdd)	3V ~ 5.5V
Data Converters	-
Oscillator Type	External
Operating Temperature	0°C ~ 70°C (TA)
Mounting Type	Surface Mount
Package / Case	28-SSOP (0.209", 5.30mm Width)
Supplier Device Package	28-SSOP
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/pic16c55a-04-ss

Table of Contents

TO OUR VALUED CUSTOMERS

It is our intention to provide our valued customers with the best documentation possible to ensure successful use of your Microchip products. To this end, we will continue to improve our publications to better suit your needs. Our publications will be refined and enhanced as new volumes and updates are introduced.

If you have any questions or comments regarding this publication, please contact the Marketing Communications Department via E-mail at **docerrors@mail.microchip.com** or fax the **Reader Response Form** in the back of this data sheet to (480) 792-4150. We welcome your feedback.

Most Current Data Sheet

To obtain the most up-to-date version of this data sheet, please register at our Worldwide Web site at:

http://www.microchip.com

You can determine the version of a data sheet by examining its literature number found on the bottom outside corner of any page. The last character of the literature number is the version number, (e.g., DS30000A is version A of document DS30000).

Errata

An errata sheet, describing minor operational differences from the data sheet and recommended workarounds, may exist for current devices. As device/documentation issues become known to us, we will publish an errata sheet. The errata will specify the revision of silicon and revision of document to which it applies.

To determine if an errata sheet exists for a particular device, please check with one of the following:

- Microchip's Worldwide Web site; http://www.microchip.com
- Your local Microchip sales office (see last page)
- The Microchip Corporate Literature Center; U.S. FAX: (480) 792-7277

When contacting a sales office or the literature center, please specify which device, revision of silicon and data sheet (include literature number) you are using.

Customer Notification System

Register on our web site at **www.microchip.com/cn** to receive the most current information on all of our products.

TABLE 1-1: PIC16C5X FAMILY OF DEVICES

Features	PIC16C54	PIC16CR54	PIC16C55	PIC16C56	PIC16CR56

TABLE 3-2: PINOUT DESCRIPTION - PIC16C55, PIC16C57, PIC16CR57

Pin Name	Pin Number			Pin Type	Buffer Type	Description
	DIP	SOIC	SSOP			
RA0	6	6	5	I/O	TTL	Bi-directional I/O port
RA1	7	7	6	I/O	TTL	
RA2	8	8	7	I/O	TTL	
RA3	9	9	8	I/O	TTL	
RB0	10	10	9	I/O	TTL	Bi-directional I/O port
RB1	11	11	10	I/O	TTL	
RB2	12	12	11	I/O	TTL	
RB3	13	13	12	I/O	TTL	
RB4	14	14	13	I/O	TTL	
RB5	15	15	15	I/O	TTL	
RB6	16	16	16	I/O	TTL	
RB7	17	17	17	I/O	TTL	
RC0	18	18	18	I/O	TTL	Bi-directional I/O port
RC1	19	19	19	I/O	TTL	
RC2	20	20	20	I/O	TTL	
RC3	21	21	21	I/O	TTL	
RC4	22	22	22	I/O	TTL	
RC5	23	23	23	I/O	TTL	
RC6	24	24	24	I/O	TTL	
RC7	25	25	25	I/O	TTL	
T0CKI	1	1	2	I	ST	Clock input to Timer0. Must be tied to V_{SS} or V_{DD}, if not in use, to reduce current consumption.
$\overline{MCLR}$	28	28	28	I	ST	Master clear (RESET) input. This pin is an active low RESET to the device.
OSC1/CLKIN	27	27	27	I	ST	Oscillator crystal input/external clock source input.
OSC2/CLKOUT	26	26	26	O	—	Oscillator crystal output. Connects to crystal or resonator in crystal Oscillator mode. In RC mode, OSC2 pin outputs CLKOUT which has 1/4 the frequency of OSC1, and denotes the instruction cycle rate.
V_{DD}	2	2	3,4	P	—	Positive supply for logic and I/O pins.
V_{SS}	4	4	1,14	P	—	Ground reference for logic and I/O pins.
N/C	3,5	3,5	—	—	—	Unused, do not connect.

Legend: I = input, O = output, I/O = input/output, P = power, — = Not Used, TTL = TTL input, ST = Schmitt Trigger input

FIGURE 5-3: TIME-OUT SEQUENCE ON POWER-UP ($\overline{MCLR}$ NOT TIED TO VDD)

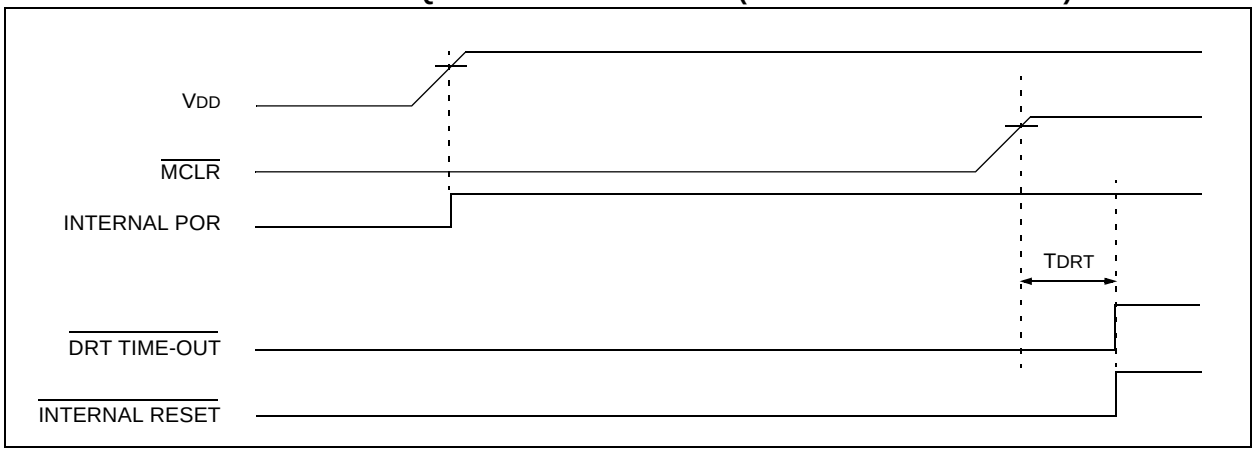

FIGURE 5-4: TIME-OUT SEQUENCE ON POWER-UP ($\overline{MCLR}$ TIED TO VDD): FAST VDD RISE TIME

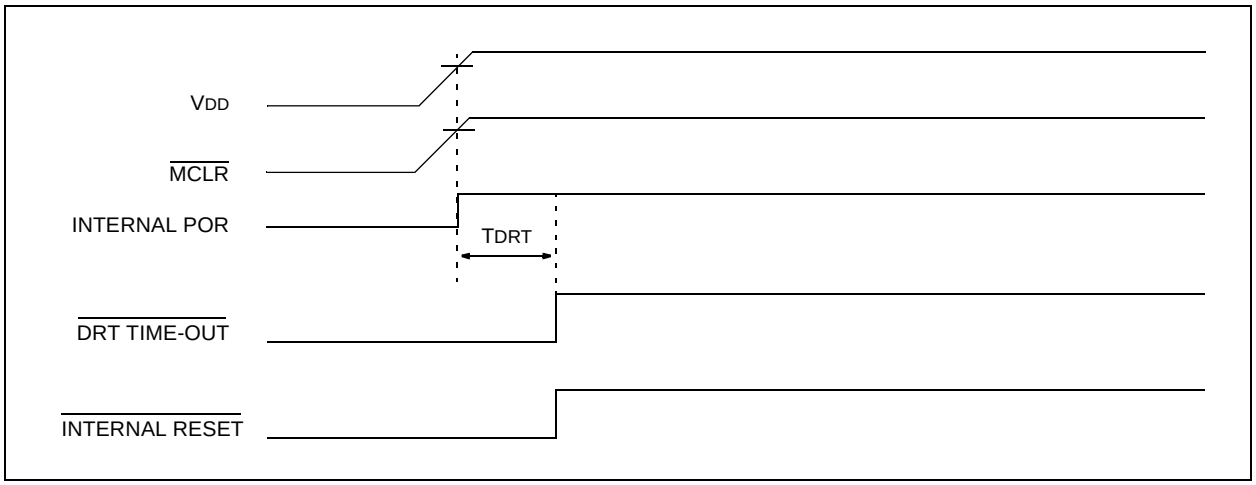

FIGURE 5-5: TIME-OUT SEQUENCE ON POWER-UP ($\overline{MCLR}$ TIED TO VDD): SLOW VDD RISE TIME

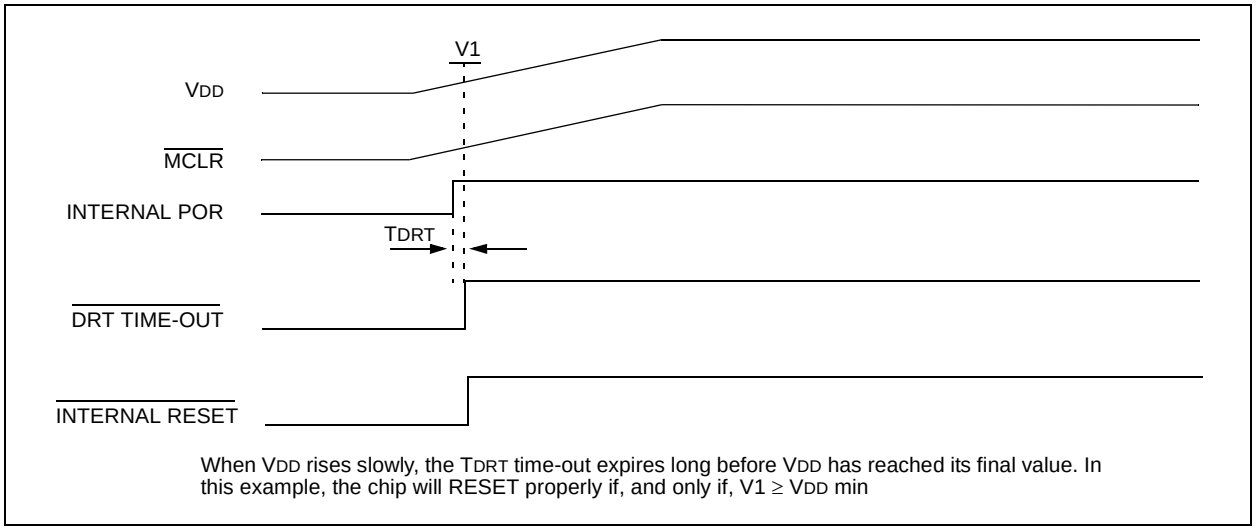

When VDD rises slowly, the TDRT time-out expires long before VDD has reached its final value. In this example, the chip will RESET properly if, and only if, V1 ≥ VDD min

6.0 MEMORY ORGANIZATION

PIC16C5X memory is organized into program memory and data memory. For devices with more than 512 bytes of program memory, a paging scheme is used. Program memory pages are accessed using one or two STATUS Register bits. For devices with a data memory register file of more than 32 registers, a banking scheme is used. Data memory banks are accessed using the File Selection Register (FSR).

6.1 Program Memory Organization

The PIC16C54, PIC16CR54 and PIC16C55 have a 9-bit Program Counter (PC) capable of addressing a 512 x 12 program memory space (Figure 6-1). The PIC16C56 and PIC16CR56 have a 10-bit Program Counter (PC) capable of addressing a 1K x 12 program memory space (Figure 6-2). The PIC16CR57, PIC16C58 and PIC16CR58 have an 11-bit Program Counter capable of addressing a 2K x 12 program memory space (Figure 6-3). Accessing a location above the physically implemented address will cause a wraparound.

A NOP at the RESET vector location will cause a restart at location 000h. The RESET vector for the PIC16C54, PIC16CR54 and PIC16C55 is at 1FFh. The RESET vector for the PIC16C56 and PIC16CR56 is at 3FFh. The RESET vector for the PIC16C57, PIC16CR57, PIC16C58, and PIC16CR58 is at 7FFh. See Section 6.5 for additional information using CALL and GOTO instructions.

FIGURE 6-1: PIC16C54/CR54/C55 PROGRAM MEMORY MAP AND STACK

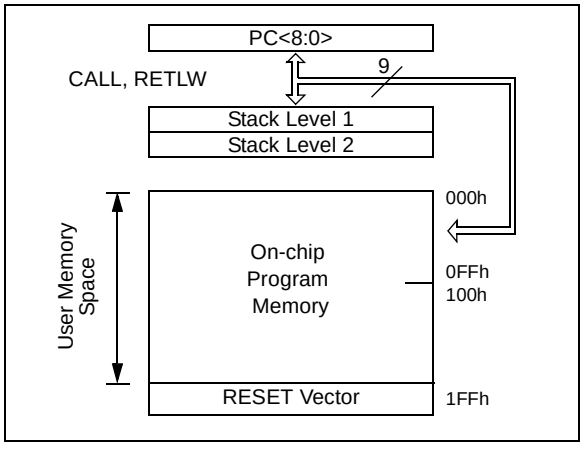

FIGURE 6-2: PIC16C56/CR56 PROGRAM MEMORY MAP AND STACK

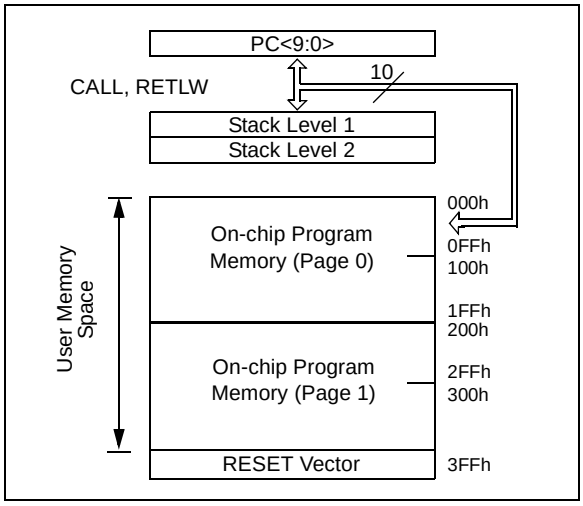

FIGURE 6-3: PIC16C57/CR57/C58/ CR58 PROGRAM MEMORY MAP AND STACK

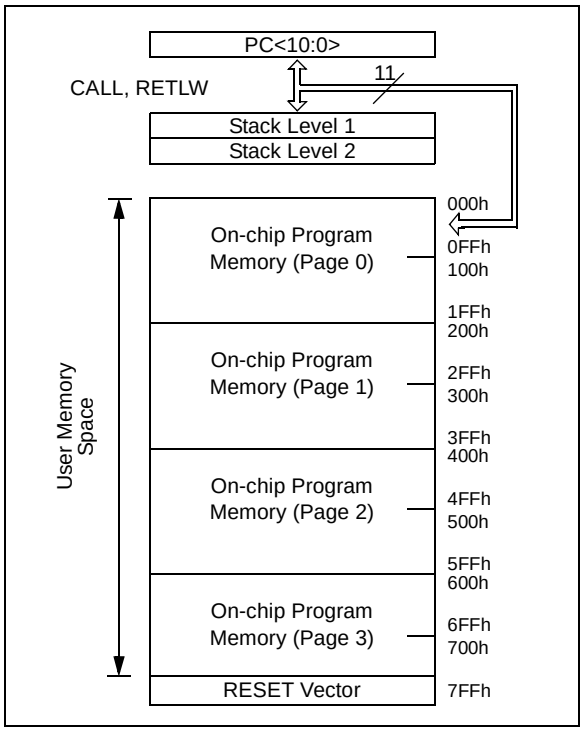

6.5.1 PAGING CONSIDERATIONS – PIC16C56/CR56, PIC16C57/CR57 AND PIC16C58/CR58

If the Program Counter is pointing to the last address of a selected memory page, when it increments it will cause the program to continue in the next higher page. However, the page preselect bits in the STATUS Register will not be updated. Therefore, the next GOTO, CALL or modify PCL instruction will send the program to the page specified by the page preselect bits (PA0 or PA<1:0>).

For example, a NOP at location 1FFh (page 0) increments the PC to 200h (page 1). A GOTO xxx at 200h will return the program to address xxh on page 0 (assuming that PA<1:0> are clear).

To prevent this, the page preselect bits must be updated under program control.

6.5.2 EFFECTS OF RESET

The Program Counter is set upon a RESET, which means that the PC addresses the last location in the last page (i.e., the RESET vector).

The STATUS Register page preselect bits are cleared upon a RESET, which means that page 0 is preselected.

Therefore, upon a RESET, a GOTO instruction at the RESET vector location will automatically cause the program to jump to page 0.

6.6 Stack

PIC16C5X devices have a 10-bit or 11-bit wide, two-level hardware push/pop stack.

A CALL instruction will push the current value of stack 1 into stack 2 and then push the current program counter value, incremented by one, into stack level 1. If more than two sequential CALL's are executed, only the most recent two return addresses are stored.

A RETLW instruction will pop the contents of stack level 1 into the program counter and then copy stack level 2 contents into level 1. If more than two sequential RETLW's are executed, the stack will be filled with the address previously stored in level 2. Note that the W Register will be loaded with the literal value specified in the instruction. This is particularly useful for the implementation of data look-up tables within the program memory.

For the RETLW instruction, the PC is loaded with the Top of Stack (TOS) contents. All of the devices covered in this data sheet have a two-level stack. The stack has the same bit width as the device PC, therefore, paging is not an issue when returning from a subroutine.

9.0 SPECIAL FEATURES OF THE CPU

What sets a microcontroller apart from other processors are special circuits that deal with the needs of real-time applications. The PIC16C5X family of microcontrollers have a host of such features intended to maximize system reliability, minimize cost through elimination of external components, provide power saving operating modes and offer code protection. These features are:

- Oscillator Selection (Section 4.0)
- RESET (Section 5.0)
- Power-On Reset (Section 5.1)
- Device Reset Timer (Section 5.2)
- Watchdog Timer (WDT) (Section 9.2)
- SLEEP (Section 9.3)
- Code protection (Section 9.4)
- ID locations (Section 9.5)

The PIC16C5X Family has a Watchdog Timer which can be shut off only through configuration bit WDTE. It runs off of its own RC oscillator for added reliability. There is an 18 ms delay provided by the Device Reset Timer (DRT), intended to keep the chip in RESET until the crystal oscillator is stable. With this timer on-chip, most applications need no external RESET circuitry.

The SLEEP mode is designed to offer a very low current Power-down mode. The user can wake up from SLEEP through external RESET or through a Watchdog Timer time-out. Several oscillator options are also made available to allow the part to fit the application. The RC oscillator option saves system cost while the LP crystal option saves power. A set of configuration bits are used to select various options.

IORLW **Inclusive OR literal with W**

Syntax: [*label*] IORLW k

Operands: $0 \le k \le 255$

Operation: (W) .OR. (k) → (W)

Status Affected: Z

Encoding:

1101	kkkk	kkkk

Description: The contents of the W register are OR'ed with the eight bit literal 'k'. The result is placed in the W register.

Words: 1

Cycles: 1

Example:
```
IORLW  0x35
```
Before Instruction
W = 0x9A
After Instruction
W = 0xBF
Z = 0

IORWF **Inclusive OR W with f**

Syntax: [*label*] IORWF f,d

Operands: $0 \le f \le 31$
$d \in [0,1]$

Operation: (W).OR. (f) → (dest)

Status Affected: Z

Encoding:

0001	00df	ffff

Description: Inclusive OR the W register with register 'f'. If 'd' is 0 the result is placed in the W register. If 'd' is 1 the result is placed back in register 'f'.

Words: 1

Cycles: 1

Example:
```
IORWF          RESULT, 0
```
Before Instruction
RESULT = 0x13
W = 0x91
After Instruction
RESULT = 0x13
W = 0x93
Z = 0

MOVF **Move f**

Syntax: [*label*] MOVF f,d

Operands: $0 \le f \le 31$
$d \in [0,1]$

Operation: (f) → (dest)

Status Affected: Z

Encoding:

0010	00df	ffff

Description: The contents of register 'f' is moved to destination 'd'. If 'd' is 0, destination is the W register. If 'd' is 1, the destination is file register 'f'. 'd' is 1 is useful to test a file register since status flag Z is affected.

Words: 1

Cycles: 1

Example:
```
MOVF   FSR,   0
```
After Instruction
W = value in FSR register

MOVLW **Move Literal to W**

Syntax: [*label*] MOVLW k

Operands: $0 \le k \le 255$

Operation: k → (W)

Status Affected: None

Encoding:

1100	kkkk	kkkk

Description: The eight bit literal 'k' is loaded into the W register.

Words: 1

Cycles: 1

Example:
```
MOVLW  0x5A
```
After Instruction
W = 0x5A

11.13 PICDEM 3 Low Cost PIC16CXXX Demonstration Board

The PICDEM 3 demonstration board is a simple demonstration board that supports the PIC16C923 and PIC16C924 in the PLCC package. It will also support future 44-pin PLCC microcontrollers with an LCD Module. All the necessary hardware and software is included to run the basic demonstration programs. The user can program the sample microcontrollers provided with the PICDEM 3 demonstration board on a PRO MATE II device programmer, or a PICSTART Plus development programmer with an adapter socket, and easily test firmware. The MPLAB ICE in-circuit emulator may also be used with the PICDEM 3 demonstration board to test firmware. A prototype area has been provided to the user for adding hardware and connecting it to the microcontroller socket(s). Some of the features include a RS-232 interface, push button switches, a potentiometer for simulated analog input, a thermistor and separate headers for connection to an external LCD module and a keypad. Also provided on the PICDEM 3 demonstration board is a LCD panel, with 4 commons and 12 segments, that is capable of displaying time, temperature and day of the week. The PICDEM 3 demonstration board provides an additional RS-232 interface and Windows software for showing the demultiplexed LCD signals on a PC. A simple serial interface allows the user to construct a hardware demultiplexer for the LCD signals.

11.14 PICDEM 17 Demonstration Board

The PICDEM 17 demonstration board is an evaluation board that demonstrates the capabilities of several Microchip microcontrollers, including PIC17C752, PIC17C756A, PIC17C762 and PIC17C766. All necessary hardware is included to run basic demo programs, which are supplied on a 3.5-inch disk. A programmed sample is included and the user may erase it and program it with the other sample programs using the PRO MATE II device programmer, or the PICSTART Plus development programmer, and easily debug and test the sample code. In addition, the PICDEM 17 demonstration board supports downloading of programs to and executing out of external FLASH memory on board. The PICDEM 17 demonstration board is also usable with the MPLAB ICE in-circuit emulator, or the PICMASTER emulator and all of the sample programs can be run and modified using either emulator. Additionally, a generous prototype area is available for user hardware.

11.15 KEELOQ Evaluation and Programming Tools

KEELOQ evaluation and programming tools support Microchip's HCS Secure Data Products. The HCS evaluation kit includes a LCD display to show changing codes, a decoder to decode transmissions and a programming interface to program test transmitters.

34	Tioz	I/O Hi-impedance from $\overline{\text{MCLR}}$ Low	—	—	100*	ns	

* These parameters are characterized but not tested.

† Data in the Typical ("Typ") column is at 5.0V, 25°C unless otherwise stated. These parameters are for design guidance only and are not tested.

13.0 ELECTRICAL CHARACTERISTICS - PIC16CR54A

Absolute Maximum Ratings(†)

Ambient Temperature under bias ..... –55°C to +125°C

Storage Temperature ..... –65°C to +150°C

Voltage on V_{DD} with respect to V_{SS} ..... 0 to +7.5V

Voltage on $\overline{MCLR}$ with respect to V_{SS}(1) ..... 0 to +14V

Voltage on all other pins with respect to V_{SS} ..... –0.6V to (V_{DD} + 0.6V)

Total power dissipation(2) ..... 800 mW

Max. current out of V_{SS} pin ..... 150 mA

Max. current into V_{DD} pin ..... 50 mA

Max. current into an input pin (T0CKI only) ..... ±500 μA

Input clamp current, I_{IK} (V_I < 0 or V_I > V_{DD}) ..... ±20 mA

Output clamp current, I_{OK} (V_0 < 0 or V_0 > V_{DD}) ..... ±20 mA

Max. output current sunk by any I/O pin ..... 25 mA

Max. output current sourced by any I/O pin ..... 20 mA

Max. output current sourced by a single I/O port (PORTA or B) ..... 40 mA

Max. output current sunk by a single I/O port (PORTA or B) ..... 50 mA

Note 1: Voltage spikes below Vss at the $\overline{MCLR}$ pin, inducing currents greater than 80 mA may cause latch-up. Thus, a series resistor of 50 to 100 Ω should be used when applying a low level to the $\overline{MCLR}$ pin rather than pulling this pin directly to Vss.

2: Power Dissipation is calculated as follows: $P_{DIS} = V_{DD} \times \{I_{DD} - \sum I_{OH}\} + \sum \{(V_{DD}-V_{OH}) \times I_{OH}\} + \sum(V_{OL} \times I_{OL})$

† NOTICE: Stresses above those listed under "Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

FIGURE 14-19: PORTA, B AND C I_{OH} vs. V_{OH}, V_{DD} = 3 V

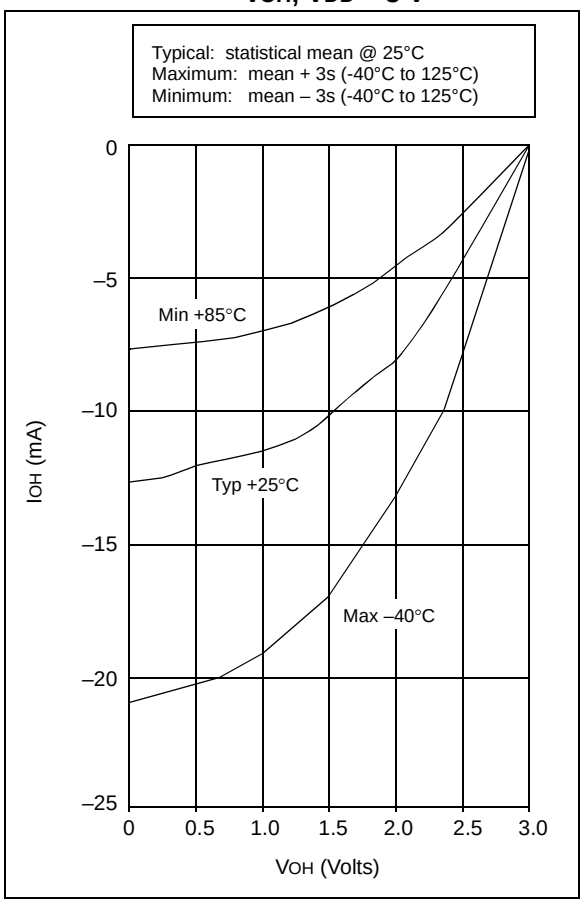

FIGURE 14-20: PORTA, B AND C I_{OH} vs. V_{OH}, V_{DD} = 5 V

Legend: Rows with standard voltage device data only are shaded for improved readability.

* These parameters are characterized but not tested.

† Data in "Typ" column is based on characterization results at 25°C. This data is for design guidance only and is not tested.

Note 1: This is the limit to which VDD can be lowered in SLEEP mode without losing RAM data.

2: The supply current is mainly a function of the operating voltage and frequency. Other factors such as bus loading, oscillator type, bus rate, internal code execution pattern and temperature also have an impact on the current consumption.

a) The test conditions for all IDD measurements in active Operation mode are: OSC1 = external square wave, from rail-to-rail; all I/O pins tristated, pulled to VSS, T0CKI = VDD, $\overline{MCLR}$ = VDD; WDT enabled/disabled as specified.

b) For standby current measurements, the conditions are the same, except that the device is in SLEEP mode. The power-down current in SLEEP mode does not depend on the oscillator type.

3: Does not include current through REXT. The current through the resistor can be estimated by the formula: IR = VDD/2REXT (mA) with REXT in kΩ.

PIC16C54A-04I, 10I, 20I (Industrial)
PIC16LC54A-04 (Commercial)
PIC16LC54A-04I (Industrial)

PIC16LC54A-04 **PIC16LC54A-04I** (Commercial, Industrial)	**Standard Operating Conditions (unless otherwise specified)** Operating Temperature 0°C ≤ TA ≤ +70°C for commercial –40°C ≤ TA ≤ +85°C for industrial
PIC16C54A-04, 10, 20 **PIC16C54A-04I, 10I, 20I** (Commercial, Industrial)	**Standard Operating Conditions (unless otherwise specified)** Operating Temperature 0°C ≤ TA ≤ +70°C for commercial –40°C ≤ TA ≤ +85°C for industrial

Param No.	Symbol	Characteristic/Device	Min	Typ†	Max	Units	Conditions
	IPD	**Power-down Current(2)**					
D006		PIC16LC5X	—	2.5	12	µA	VDD = 2.5V, WDT enabled, Commercial
			—	0.25	4.0	µA	VDD = 2.5V, WDT disabled, Commercial
			—	2.5	14	µA	VDD = 2.5V, WDT enabled, Industrial
			—	0.25	5.0	µA	VDD = 2.5V, WDT disabled, Industrial
D006A		PIC16C5X	—	4.0	12	µA	VDD = 3.0V, WDT enabled, Commercial
			—	0.25	4.0	µA	VDD = 3.0V, WDT disabled, Commercial
			—	5.0	14	µA	VDD = 3.0V, WDT enabled, Industrial
			—	0.3	5.0	µA	VDD = 3.0V, WDT disabled, Industrial

Legend: Rows with standard voltage device data only are shaded for improved readability.

* These parameters are characterized but not tested.

† Data in "Typ" column is based on characterization results at 25°C. This data is for design guidance only and is not tested.

Note 1: This is the limit to which VDD can be lowered in SLEEP mode without losing RAM data.

2: The supply current is mainly a function of the operating voltage and frequency. Other factors such as bus loading, oscillator type, bus rate, internal code execution pattern and temperature also have an impact on the current consumption.

a) The test conditions for all IDD measurements in active Operation mode are: OSC1 = external square wave, from rail-to-rail; all I/O pins tristated, pulled to VSS, T0CKI = VDD, $\overline{MCLR}$ = VDD; WDT enabled/disabled as specified.

b) For standby current measurements, the conditions are the same, except that the device is in SLEEP mode. The power-down current in SLEEP mode does not depend on the oscillator type.

3: Does not include current through REXT. The current through the resistor can be estimated by the formula: IR = VDD/2REXT (mA) with REXT in kΩ.

15.2 DC Characteristics: PIC16C54A-04E, 10E, 20E (Extended) PIC16LC54A-04E (Extended)

PIC16LC54A-04E (Extended)			**Standard Operating Conditions (unless otherwise specified)** Operating Temperature –40°C ≤ TA ≤ +125°C for extended				
PIC16C54A-04E, 10E, 20E (Extended)			**Standard Operating Conditions (unless otherwise specified)** Operating Temperature –40°C ≤ TA ≤ +125°C for extended				
Param No.	**Symbol**	**Characteristic**	**Min**	**Typ†**	**Max**	**Units**	**Conditions**
	VDD	**Supply Voltage**					
D001		PIC16LC54A	3.0 2.5	— —	6.25 6.25	V V	XT and RC modes LP mode
D001A		PIC16C54A	3.5 4.5	— —	5.5 5.5	V V	RC and XT modes HS mode
D002	VDR	**RAM Data Retention Voltage(1)**	—	1.5*	—	V	Device in SLEEP mode
D003	VPOR	**VDD Start Voltage** to ensure Power-on Reset	—	Vss	—	V	See Section 5.1 for details on Power-on Reset
D004	SVDD	**VDD Rise Rate** to ensure Power-on Reset	0.05*	—	—	V/ms	See Section 5.1 for details on Power-on Reset
	IDD	**Supply Current(2)**					
D010		PIC16LC54A	—	0.5	25	mA	FOSC = 4.0 MHz, VDD = 5.5V, RC(3) and XT modes
			—	11	27	µA	FOSC = 32 kHz, VDD = 2.5V, LP mode, Commercial
			—	11	35	µA	FOSC = 32 kHz, VDD = 2.5V, LP mode, Industrial
			—	11	37	µA	FOSC = 32 kHz, VDD = 2.5V, LP mode, Extended
D010A		PIC16C54A	—	1.8	3.3	mA	FOSC = 4.0 MHz, VDD = 5.5V, RC(3) and XT modes
			—	4.8	10	mA	FOSC = 10 MHz, VDD = 5.5V, HS mode
			—	9.0	20	mA	FOSC = 20 MHz, VDD = 5.5V, HS mode

Legend: Rows with standard voltage device data only are shaded for improved readability.

† Data in the Typical ("Typ") column is based on characterization results at 25°C. This data is for design guidance only and is not tested.

Note 1: This is the limit to which VDD can be lowered in SLEEP mode without losing RAM data.

2: The supply current is mainly a function of the operating voltage and frequency. Other factors such as bus loading, oscillator type, bus rate, internal code execution pattern and temperature also have an impact on the current consumption.

a) The test conditions for all IDD measurements in active Operation mode are: OSC1 = external square wave, from rail-to-rail; all I/O pins tristated, pulled to VSS, T0CKI = VDD, $\overline{MCLR}$ = VDD; WDT enabled/disabled as specified.

b) For standby current measurements, the conditions are the same, except that the device is in SLEEP mode. The power-down current in SLEEP mode does not depend on the oscillator type.

3: Does not include current through REXT. The current through the resistor can be estimated by the formula: IR = VDD/2REXT (mA) with REXT in kΩ.

FIGURE 16-14: TYPICAL IDD vs. FREQUENCY (WDT DISABLED, RC MODE @ 300 pF, 25°C)

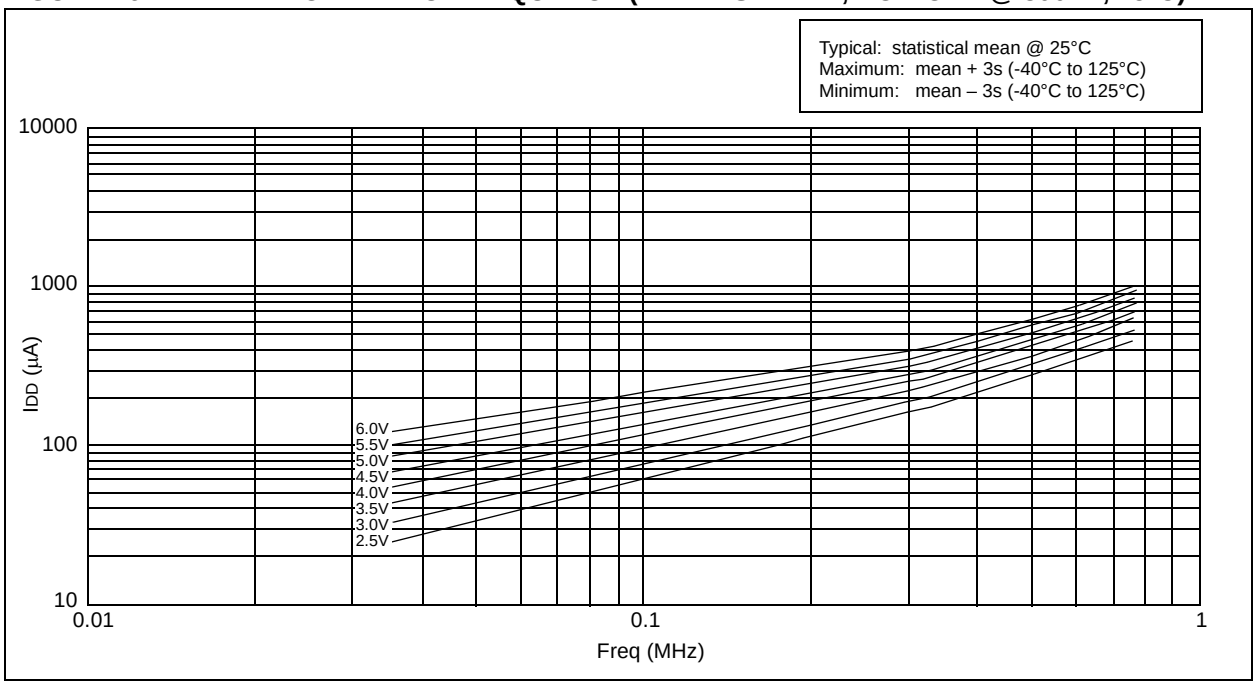

FIGURE 16-15: MAXIMUM IDD vs. FREQUENCY (WDT DISABLED, RC MODE @ 300 pF, –40°C to +85°C)

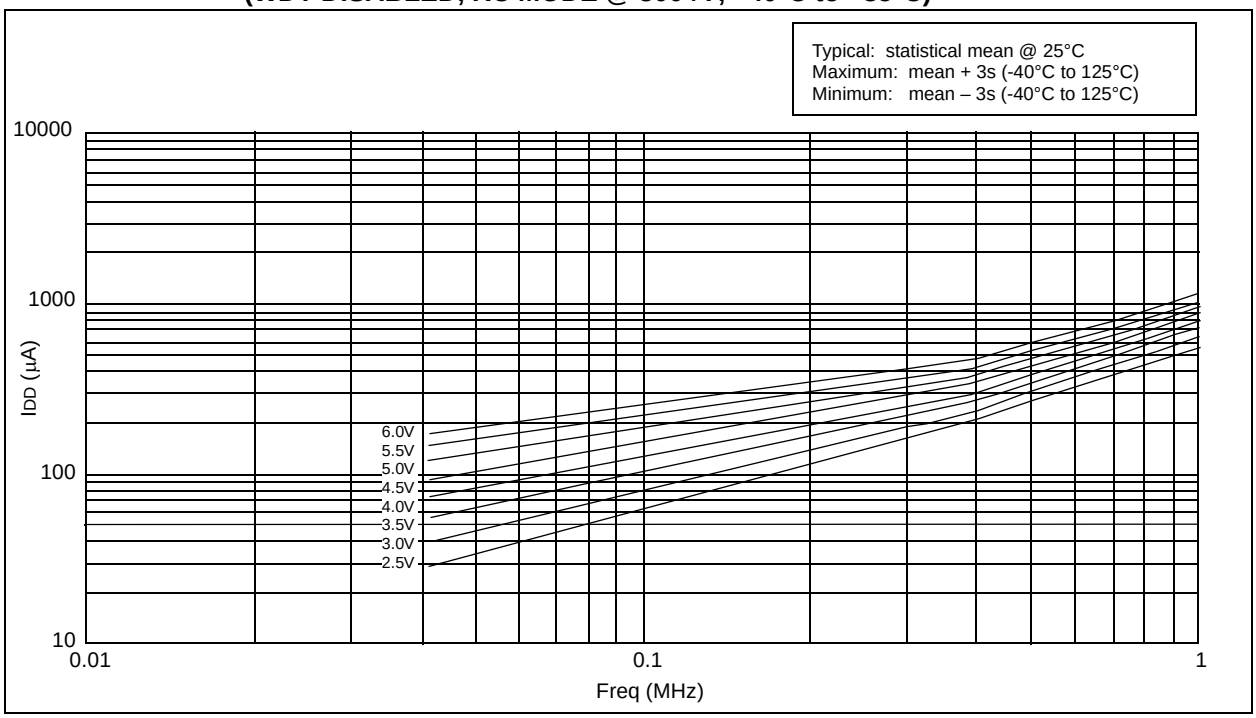

FIGURE 18-16: PORTA, B AND C I_{OH} vs. V_{OH}, V_{DD} = 5 V

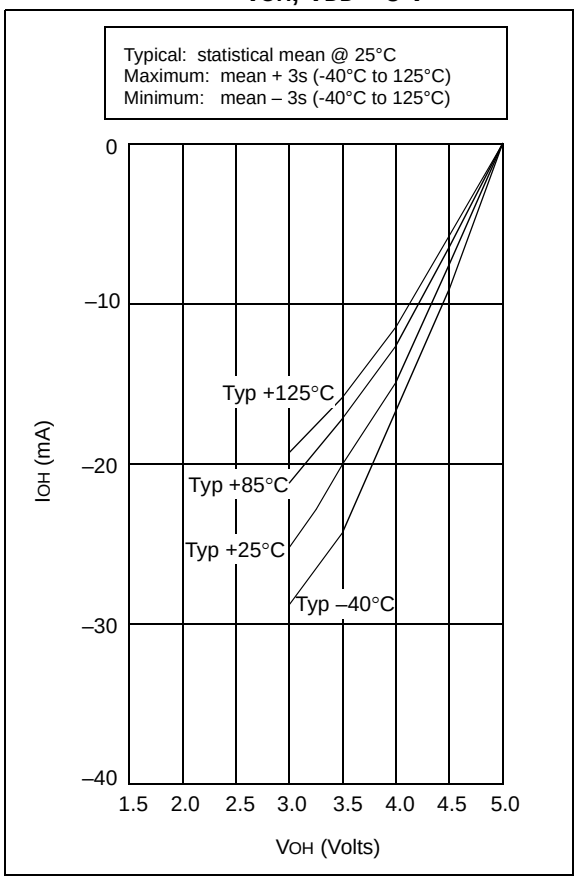

FIGURE 18-17: PORTA, B AND C I_{OL} vs. V_{OL}, V_{DD} = 3 V

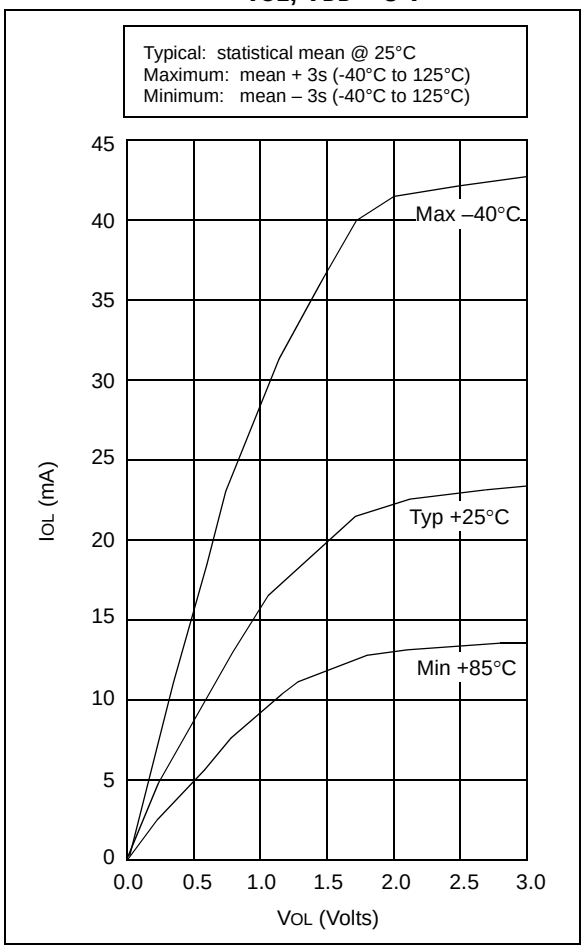


19.0 ELECTRICAL CHARACTERISTICS - PIC16LC54C 40MHz

Absolute Maximum Ratings(†)

Ambient temperature under bias ..... –55°C to +125°C
Storage temperature ..... –65°C to +150°C
Voltage on V_{DD} with respect to V_{SS} ..... 0 to +7.5V
Voltage on $\overline{MCLR}$ with respect to V_{SS} ..... 0 to +14V
Voltage on all other pins with respect to V_{SS} ..... –0.6V to (V_{DD} + 0.6V)
Total power dissipation(1) ..... 800 mW
Max. current out of V_{SS} pin ..... 150 mA
Max. current into V_{DD} pin ..... 100 mA
Max. current into an input pin (T0CKI only) ..... ±500 μA
Input clamp current, I_{IK} (V_I < 0 or V_I > V_{DD}) ..... ±20 mA
Output clamp current, I_{OK} (V_O < 0 or V_O > V_{DD}) ..... ±20 mA
Max. output current sunk by any I/O pin ..... 25 mA
Max. output current sourced by any I/O pin ..... 20 mA
Max. output current sourced by a single I/O (Port A, B or C) ..... 50 mA
Max. output current sunk by a single I/O (Port A, B or C) ..... 50 mA

Note 1: Power dissipation is calculated as follows: $P_{dis} = V_{DD} \times \{I_{DD} - \sum I_{OH}\} + \sum \{(V_{DD}-V_{OH}) \times I_{OH}\} + \sum(V_{OL} \times I_{OL})$

† NOTICE: Stresses above those listed under "Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

19.3 Timing Parameter Symbology and Load Conditions

The timing parameter symbols have been created with one of the following formats:

1. TppS2ppS
2. TppS

T	
F Frequency	T Time

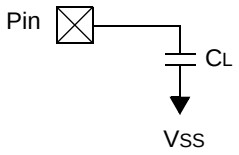
Lowercase letters (pp) and their meanings:

pp	
2 to	mc $\overline{\text{MCLR}}$
ck CLKOUT	osc oscillator
cy cycle time	os OSC1
drt device reset timer	t0 T0CKI
io I/O port	wdt watchdog timer

Uppercase letters and their meanings:

S	
F Fall	P Period
H High	R Rise
I Invalid (Hi-impedance)	V Valid
L Low	Z Hi-impedance

FIGURE 19-2: LOAD CONDITIONS FOR DEVICE TIMING SPECIFICATIONS - PIC16C54C/C55A/C56A/C57C/C58B-40



C_L = 50 pF for all pins except OSC2
0 pF for OSC2 in HS mode for operation between 20 MHz to 40 MHz
