## Understanding **Embedded - FPGAs (Field Programmable Gate Array)**

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

## Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

### Details

Product Status	Active
Number of LABs/CLBs	264
Number of Logic Elements/Cells	2112
Total RAM Bits	75776
Number of I/O	206
Number of Gates	-
Voltage - Supply	1.14V ~ 1.26V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	256-VFBGA
Supplier Device Package	256-CSFBGA (9x9)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/lattice-semiconductor/lcmxo3lf-2100e-6mg256c">https://www.e-xfl.com/product-detail/lattice-semiconductor/lcmxo3lf-2100e-6mg256c</a>

1. Package is only available for E=1.2 V devices.  
2. Package is only available for C=2.5 V/3.3 V devices.

## Introduction

MachXO3™ device family is an Ultra-Low Density family that supports the most advanced programmable bridging and IO expansion. It has the breakthrough IO density and the lowest cost per IO. The device IO features have the integrated support for latest industry standard IO.

The MachXO3L/LF family of low power, instant-on, non-volatile PLDs has five devices with densities ranging from 640 to 9400 Look-Up Tables (LUTs). In addition to LUT-based, low-cost programmable logic these devices feature Embedded Block RAM (EBR), Distributed RAM, Phase Locked Loops (PLLs), pre-engineered source synchronous I/O support, advanced configuration support including dual-boot capability and hardened versions of commonly used functions such as SPI controller, I<sup>2</sup>C controller and timer/counter. MachXO3LF devices also support User Flash Memory (UFM). These features allow these devices to be used in low cost, high volume consumer and system applications.

The MachXO3L/LF devices are designed on a 65nm non-volatile low power process. The device architecture has several features such as programmable low swing differential I/Os and the ability to turn off I/O banks, on-chip PLLs

and oscillators dynamically. These features help manage static and dynamic power consumption resulting in low static power for all members of the family.

The MachXO3L/LF devices are available in two versions C and E with two speed grades: -5 and -6, with -6 being the fastest. C devices have an internal linear voltage regulator which supports external VCC supply voltages of 3.3 V or 2.5 V. E devices only accept 1.2 V as the external VCC supply voltage. With the exception of power supply voltage both C and E are functionally compatible with each other.

The MachXO3L/LF PLDs are available in a broad range of advanced halogen-free packages ranging from the space saving 2.5 x 2.5 mm WLCSP to the 19 x 19 mm caBGA. MachXO3L/LF devices support density migration within the same package. Table 1-1 shows the LUT densities, package and I/O options, along with other key parameters.

The MachXO3L/LF devices offer enhanced I/O features such as drive strength control, slew rate control, PCI compatibility, bus-keeper latches, pull-up resistors, pull-down resistors, open drain outputs and hot socketing. Pull-up, pull-down and bus-keeper features are controllable on a “per-pin” basis.

A user-programmable internal oscillator is included in MachXO3L/LF devices. The clock output from this oscillator may be divided by the timer/counter for use as clock input in functions such as LED control, key-board scanner and similar state machines.

The MachXO3L/LF devices also provide flexible, reliable and secure configuration from on-chip NVCM/Flash. These devices can also configure themselves from external SPI Flash or be configured by an external master through the JTAG test access port or through the I<sup>2</sup>C port. Additionally, MachXO3L/LF devices support dual-boot capability (using external Flash memory) and remote field upgrade (TransFR) capability.

Lattice provides a variety of design tools that allow complex designs to be efficiently implemented using the MachXO3L/LF family of devices. Popular logic synthesis tools provide synthesis library support for MachXO3L/LF. Lattice design tools use the synthesis tool output along with the user-specified preferences and constraints to place and route the design in the MachXO3L/LF device. These tools extract the timing from the routing and back-annotate it into the design for timing verification.

Lattice provides many pre-engineered IP (Intellectual Property) LatticeCORE™ modules, including a number of reference designs licensed free of charge, optimized for the MachXO3L/LF PLD family. By using these configurable soft core IP cores as standardized blocks, users are free to concentrate on the unique aspects of their design, increasing their productivity.

**Table 2-5. sysMEM Block Configurations**

Memory Mode	Configurations
Single Port	8,192 x 1 4,096 x 2 2,048 x 4 1,024 x 9
True Dual Port	8,192 x 1 4,096 x 2 2,048 x 4 1,024 x 9
Pseudo Dual Port	8,192 x 1 4,096 x 2 2,048 x 4 1,024 x 9 512 x 18
FIFO	8,192 x 1 4,096 x 2 2,048 x 4 1,024 x 9 512 x 18

### Bus Size Matching

All of the multi-port memory modes support different widths on each of the ports. The RAM bits are mapped LSB word 0 to MSB word 0, LSB word 1 to MSB word 1, and so on. Although the word size and number of words for each port varies, this mapping scheme applies to each port.

### RAM Initialization and ROM Operation

If desired, the contents of the RAM can be pre-loaded during device configuration. EBR initialization data can be loaded from the NVCM or Configuration Flash.

MachXO3LF EBR initialization data can also be loaded from the UFM. To maximize the number of UFM bits, initialize the EBRs used in your design to an all-zero pattern. Initializing to an all-zero pattern does not use up UFM bits. MachXO3LF devices have been designed such that multiple EBRs share the same initialization memory space if they are initialized to the same pattern.

By preloading the RAM block during the chip configuration cycle and disabling the write controls, the sysMEM block can also be utilized as a ROM.

### Memory Cascading

Larger and deeper blocks of RAM can be created using EBR sysMEM Blocks. Typically, the Lattice design tools cascade memory transparently, based on specific design inputs.

### Single, Dual, Pseudo-Dual Port and FIFO Modes

Figure 2-8 shows the five basic memory configurations and their input/output names. In all the sysMEM RAM modes, the input data and addresses for the ports are registered at the input of the memory array. The output data of the memory is optionally registered at the memory array output.

## Output Gearbox

Each PIC on the top edge has a built-in 8:1 output gearbox. Each of these output gearboxes may be programmed as a 7:1 serializer or as one ODDR4 (8:1) gearbox or as two ODDR2 (4:1) gearboxes. Table 2-10 shows the gearbox signals.

**Table 2-10. Output Gearbox Signal List**

Name	I/O Type	Description
Q	Output	High-speed data output
D[7:0]	Input	Low-speed data from device core
Video TX(7:1): D[6:0]		
GDDR4(8:1): D[7:0]		
GDDR2(4:1)(IOL-A): D[3:0]		
GDDR2(4:1)(IOL-C): D[7:4]		
SCLK	Input	Slow-speed system clock
ECLK [1:0]	Input	High-speed edge clock
RST	Input	Reset

The gearboxes have three stage pipeline registers. The first stage registers sample the low-speed input data on the low-speed system clock. The second stage registers transfer data from the low-speed clock registers to the high-speed clock registers. The third stage pipeline registers controlled by high-speed edge clock shift and mux the high-speed data out to the sysIO buffer. Figure 2-14 shows the output gearbox block diagram.

There are some limitations on the use of the hardened user SPI. These are defined in the following technical notes:

- TN1087, [Minimizing System Interruption During Configuration Using TransFR Technology](#) (Appendix B)
- TN1293, [Using Hardened Control Functions in MachXO3 Devices](#)

**Figure 2-19. SPI Core Block Diagram**

Table 2-15 describes the signals interfacing with the SPI cores.

**Table 2-15. SPI Core Signal Description**

Signal Name	I/O	Master/Slave	Description
spi_csn[0]	O	Master	SPI master chip-select output
spi_csn[1..7]	O	Master	Additional SPI chip-select outputs (total up to eight slaves)
spi_scsn	I	Slave	SPI slave chip-select input
spi_irq	O	Master/Slave	Interrupt request
spi_clk	I/O	Master/Slave	SPI clock. Output in master mode. Input in slave mode.
spi_miso	I/O	Master/Slave	SPI data. Input in master mode. Output in slave mode.
spi_mosi	I/O	Master/Slave	SPI data. Output in master mode. Input in slave mode.
sn	I	Slave	Configuration Slave Chip Select (active low), dedicated for selecting the Configuration Logic.
cfg_stdby	O	Master/Slave	Stand-by signal – To be connected only to the power module of the MachXO3L/LF device. The signal is enabled only if the “Wakeup Enable” feature has been set within the EFB GUI, SPI Tab.
cfg_wake	O	Master/Slave	Wake-up signal – To be connected only to the power module of the MachXO3L/LF device. The signal is enabled only if the “Wakeup Enable” feature has been set within the EFB GUI, SPI Tab.

## TraceID

Each MachXO3L/LF device contains a unique (per device), TraceID that can be used for tracking purposes or for IP security applications. The TraceID is 64 bits long. Eight out of 64 bits are user-programmable, the remaining 56 bits are factory-programmed. The TraceID is accessible through the EFB WISHBONE interface and can also be accessed through the SPI, I<sup>2</sup>C, or JTAG interfaces.

## Density Shifting

The MachXO3L/LF family has been designed to enable density migration within the same package. Furthermore, the architecture ensures a high success rate when performing design migration from lower density devices to higher density devices. In many cases, it is also possible to shift a lower utilization design targeted for a high-density device to a lower density device. However, the exact details of the final resource utilization will impact the likely success in each case. When migrating from lower to higher density or higher to lower density, ensure to review all the power supplies and NC pins of the chosen devices. For more details refer to the [MachXO3 migration files](#).

### LVDS Emulation

MachXO3L/LF devices can support LVDS outputs via emulation (LVDS25E). The output is emulated using complementary LVC MOS outputs in conjunction with resistors across the driver outputs on all devices. The scheme shown in Figure 3-1 is one possible solution for LVDS standard implementation. Resistor values in Figure 3-1 are industry standard values for 1% resistors.

Figure 3-1. LVDS Using External Resistors (LVDS25E)

Table 3-1. LVDS25E DC Conditions

**Over Recommended Operating Conditions**

Parameter	Description	Typ.	Units
$Z_{OUT}$	Output impedance	20	Ohms
$R_S$	Driver series resistor	158	Ohms
$R_P$	Driver parallel resistor	140	Ohms
$R_T$	Receiver termination	100	Ohms
$V_{OH}$	Output high voltage	1.43	V
$V_{OL}$	Output low voltage	1.07	V
$V_{OD}$	Output differential voltage	0.35	V
$V_{CM}$	Output common mode voltage	1.25	V
$Z_{BACK}$	Back impedance	100.5	Ohms
$I_{DC}$	DC output current	6.03	mA

**Table 3-5. MIPI D-PHY Output DC Conditions<sup>1</sup>**

	Description	Min.	Typ.	Max.	Units
<b>Transmitter</b>					
<b>External Termination</b>					
RL	1% external resistor with VCCIO = 2.5 V	—	50	—	Ohms
	1% external resistor with VCCIO = 3.3 V	—	50	—	
RH	1% external resistor with performance up to 800 Mbps or with performance up 900 Mbps when VCCIO = 2.5 V	—	330	—	Ohms
	1% external resistor with performance between 800 Mbps to 900 Mbps when VCCIO = 3.3 V	—	464	—	Ohms
<b>High Speed</b>					
VCCIO	VCCIO of the Bank with LVDS Emulated output buffer	—	2.5	—	V
	VCCIO of the Bank with LVDS Emulated output buffer	—	3.3	—	V
VCMTX	HS transmit static common mode voltage	150	200	250	mV
VOD	HS transmit differential voltage	140	200	270	mV
VOHHS	HS output high voltage	—	—	360	V
ZOS	Single ended output impedance	—	50	—	Ohms
ΔZOS	Single ended output impedance mismatch	—	—	10	%
<b>Low Power</b>					
VCCIO	VCCIO of the Bank with LVCMOS12D 6 mA drive bidirectional IO buffer	—	1.2	—	V
VOH	Output high level	1.1	1.2	1.3	V
VOL	Output low level	-50	0	50	mV
ZOLP	Output impedance of LP transmitter	110	—	—	Ohms

1. Over Recommended Operating Conditions

## Typical Building Block Function Performance – C/E Devices<sup>1</sup>

### Pin-to-Pin Performance (LVCMOS25 12 mA Drive)

Function	–6 Timing	Units
<b>Basic Functions</b>		
16-bit decoder	8.9	ns
4:1 MUX	7.5	ns
16:1 MUX	8.3	ns

### Register-to-Register Performance

Function	–6 Timing	Units
<b>Basic Functions</b>		
16:1 MUX	412	MHz
16-bit adder	297	MHz
16-bit counter	324	MHz
64-bit counter	161	MHz
<b>Embedded Memory Functions</b>		
1024x9 True-Dual Port RAM (Write Through or Normal, EBR output registers)	183	MHz
<b>Distributed Memory Functions</b>		
16x4 Pseudo-Dual Port RAM (one PFU)	500	MHz

1. The above timing numbers are generated using the Diamond design tool. Exact performance may vary with device and tool version. The tool uses internal parameters that have been characterized but are not tested on every device. Commercial timing numbers are shown at 85 °C and 1.14 V. Other operating conditions, including industrial, can be extracted from the Diamond software.

## Derating Logic Timing

Logic timing provided in the following sections of the data sheet and the Lattice design tools are worst case numbers in the operating range. Actual delays may be much faster. Lattice design tools can provide logic timing numbers at a particular temperature and voltage.

Parameter	Description	Device	-6		-5		Units
			Min.	Max.	Min.	Max.	
<b>General I/O Pin Parameters (Using Edge Clock without PLL)</b>

### Signal Descriptions

Signal Name	I/O	Descriptions
<b>General Purpose</b>		
P[Edge] [Row/Column Number]_[A/B/C/D]	I/O	<p>[Edge] indicates the edge of the device on which the pad is located. Valid edge designations are L (Left), B (Bottom), R (Right), T (Top).</p> <p>[Row/Column Number] indicates the PFU row or the column of the device on which the PIO Group exists. When Edge is T (Top) or (Bottom), only need to specify Row Number. When Edge is L (Left) or R (Right), only need to specify Column Number.</p> <p>[A/B/C/D] indicates the PIO within the group to which the pad is connected.</p> <p>Some of these user-programmable pins are shared with special function pins. When not used as special function pins, these pins can be programmed as I/Os for user logic.</p> <p>During configuration of the user-programmable I/Os, the user has an option to tri-state the I/Os and enable an internal pull-up, pull-down or buskeeper resistor. This option also applies to unused pins (or those not bonded to a package pin). The default during configuration is for user-programmable I/Os to be tri-stated with an internal pull-down resistor enabled. When the device is erased, I/Os will be tri-stated with an internal pull-down resistor enabled. Some pins, such as PROGRAMN and JTAG pins, default to tri-stated I/Os with pull-up resistors enabled when the device is erased.</p>
NC	—	No connect.
GND	—	GND – Ground. Dedicated pins. It is recommended that all GNDs are tied together.
VCC	—	V <sub>CC</sub> – The power supply pins for core logic. Dedicated pins. It is recommended that all VCCs are tied to the same supply.
VCCIOx	—	VCCIO – The power supply pins for I/O Bank x. Dedicated pins. It is recommended that all VCCIOs located in the same bank are tied to the same supply.
<b>PLL and Clock Functions</b> (Used as user-programmable I/O pins when not used for PLL or clock pins)		
[LOC]_GPLL[T, C]_IN	—	Reference Clock (PLL) input pads: [LOC] indicates location. Valid designations are L (Left PLL) and R (Right PLL). T = true and C = complement.
[LOC]_GPLL[T, C]_FB	—	Optional Feedback (PLL) input pads: [LOC] indicates location. Valid designations are L (Left PLL) and R (Right PLL). T = true and C = complement.
PCLK [n]_[2:0]	—	Primary Clock pads. One to three clock pads per side.
<b>Test and Programming</b> (Dual function pins used for test access port and during sysCONFIG™)		
TMS	I	Test Mode Select input pin, used to control the 1149.1 state machine.
TCK	I	Test Clock input pin, used to clock the 1149.1 state machine.
TDI	I	Test Data input pin, used to load data into the device using an 1149.1 state machine.
TDO	O	Output pin – Test Data output pin used to shift data out of the device using 1149.1.
JTAGENB	I	<p>Optionally controls behavior of TDI, TDO, TMS, TCK. If the device is configured to use the JTAG pins (TDI, TDO, TMS, TCK) as general purpose I/O, then:</p> <p>If JTAGENB is low: TDI, TDO, TMS and TCK can function a general purpose I/O.</p> <p>If JTAGENB is high: TDI, TDO, TMS and TCK function as JTAG pins.</p> <p>For more details, refer to TN1279, <a href="#">MachXO3 Programming and Configuration Usage Guide</a>.</p>

## Signal Descriptions (Cont.)

Signal Name	I/O	Descriptions
<b>Configuration</b> (Dual function pins used during sysCONFIG)		
PROGRAMN	I	Initiates configuration sequence when asserted low. This pin always has an active pull-up.
INITN	I/O	Open Drain pin. Indicates the FPGA is ready to be configured. During configuration, a pull-up is enabled.
DONE	I/O	Open Drain pin. Indicates that the configuration sequence is complete, and the start-up sequence is in progress.
MCLK/CCLK	I/O	Input Configuration Clock for configuring an FPGA in Slave SPI mode. Output Configuration Clock for configuring an FPGA in SPI and SPIm configuration modes.
SN	I	Slave SPI active low chip select input.
CSSPIN	I/O	Master SPI active low chip select output.
SI/SPISI	I/O	Slave SPI serial data input and master SPI serial data output.
SO/SPISO	I/O	Slave SPI serial data output and master SPI serial data input.
SCL	I/O	Slave I <sup>2</sup> C clock input and master I <sup>2</sup> C clock output.
SDA	I/O	Slave I <sup>2</sup> C data input and master I <sup>2</sup> C data output.

Date	Version	Section	Change Summary
February 2017	1.8	Architecture	Updated <a href="#">Supported Standards</a> section. Corrected “MDVS” to “MLDVS” in Table 2-11, Supported Input Standards.
		DC and Switching Characteristics	Updated <a href="#">ESD Performance</a> section. Added reference to the MachXO2 Product Family Qualification Summary document.
			Updated <a href="#">Static Supply Current – C/E Devices</a> section. Added footnote 7.
			Updated <a href="#">MachXO3L/LF External Switching Characteristics – C/E Devices</a> section. — Populated values for MachXO3L/LF-9400. — Under 7:1 LVDS Outputs – GDDR71_TX.ECLK.7:1, corrected “t <sub>DVB</sub> ” to “t <sub>DIB</sub> ” and “t <sub>DVA</sub> ” to “t <sub>DIA</sub> ” and revised their descriptions. — Added Figure 3-6, Receiver GDDR71_RX Waveforms and Figure 3-7, Transmitter GDDR71_TX Waveforms.
Pinout Information	Updated the <a href="#">Pin Information Summary</a> section. Added MachXO3L/LF-9600C packages.		
May 2016	1.7	DC and Switching Characteristics	Updated Absolute Maximum Ratings section. Modified I/O Tri-state Voltage Applied and Dedicated Input Voltage Applied footnotes.
			Updated sysIO Recommended Operating Conditions section. — Added standards. — Added V <sub>REF</sub> (V) — Added footnote 4.
			Updated sysIO Single-Ended DC Electrical Characteristics section. Added I/O standards.
		Ordering Information	Updated MachXO3L Ultra Low Power Commercial and Industrial Grade Devices, Halogen Free (RoHS) Packaging section. Added LCMXO3L-9400C part numbers.
Updated MachXO3LF Ultra Low Power Commercial and Industrial Grade Devices, Halogen Free (RoHS) Packaging section. Added LCMXO3L-9400C part numbers.			

Date	Version	Section	Change Summary
April 2016	1.6	Introduction	Updated Features section. — Revised logic density range and IO to LUT ratio under Flexible Architecture. — Revised 0.8 mm pitch information under Advanced Packaging. — Added MachXO3L-9400/MachXO3LF-9400 information to Table 1-1, MachXO3L/LF Family Selection Guide.
			Updated Introduction section. — Changed density from 6900 to 9400 LUTs. — Changed caBGA packaging to 19 x 19 mm.
		Architecture	Updated Architecture Overview section. — Changed statement to “All logic density devices in this family...” — Updated Figure 2-2 heading and notes.
			Updated sysCLOCK Phase Locked Loops (PLLs) section. — Changed statement to “All MachXO3L/LF devices have one or more sysCLOCK PLL.”
			Updated Programmable I/O Cells (PIC) section. — Changed statement to “All PIO pairs can implement differential receivers.”
			Updated sysIO Buffer Banks section. Updated Figure 2-5 heading.
			Updated Device Configuration section. Added Password and Soft Error Correction.
		DC and Switching Characteristics	Updated Static Supply Current – C/E Devices section. Added LCMXO3L/LF-9400C and LCMXO3L/LF-9400E devices.
			Updated Programming and Erase Supply Current – C/E Devices section. — Added LCMXO3L/LF-9400C and LCMXO3L/LF-9400E devices. — Changed LCMXO3L/LF-640E and LCMXO3L/LF-1300E Typ. values.
			Updated MachXO3L/LF External Switching Characteristics – C/E Devices section. Added MachXO3L/LF-9400 devices.
			Updated NVCM/Flash Download Time section. Added LCMXO3L/LF-9400C device.
			Updated sysCONFIG Port Timing Specifications section. — Added LCMXO3L/LF-9400C device. — Changed $t_{INITL}$ units to from ns to us. — Changed $t_{DPPINIT}$ and $t_{DPPDONE}$ Max. values are per PCN#03A-16.
		Pinout Information	Updated Pin Information Summary section. Added LCMXO3L/LF-9400C device.
		Ordering Information	Updated MachXO3 Part Number Description section. — Added 9400 = 9400 LUTs. — Added BG484 package.
			Updated MachXO3L Ultra Low Power Commercial and Industrial Grade Devices, Halogen Free (RoHS) Packaging section. Added LCMXO3L-9400C part numbers.
			Updated MachXO3LF Ultra Low Power Commercial and Industrial Grade Devices, Halogen Free (RoHS) Packaging section. Added LCMXO3L-9400C part numbers.

Date	Version	Section	Change Summary	
September 2015	1.5	DC and Switching Characteristics	Updated the MIPI D-PHY Emulation section. Revised Table 3-5, MIPI D-PHY Output DC Conditions. — Revised RL Typ. value. — Revised RH description and values.	
			Updated the Maximum sysIO Buffer Performance section. Revised MIPI Max. Speed value.	
			Updated the MachXO3L/LF External Switching Characteristics – C/E Devices section. Added footnotes 14 and 15.	
August 2015	1.4	Architecture	Updated the Device Configuration section. Added JTAGENB to TAP dual purpose pins.	
		Ordering Information	Updated the top side markings section to indicate the use of LMXO3LF for the LCMXO3LF device.	
March 2015	1.3	All	General update. Added MachXO3LF devices.	
October 2014	1.2	Introduction	Updated Table 1-1, MachXO3L Family Selection Guide. Revised XO3L-2100 and XO3L-4300 IO for 324-ball csFBGA package.	
		Architecture	Updated the Dual Boot section. Corrected information on where the primary bitstream and the golden image must reside.	
		Pinout Information	Updated the Pin Information Summary section. Changed General Purpose IO Bank 5 values for MachXO3L-2100 and MachXO3L-4300 CSFBGA 324 package. Changed Number 7:1 or 8:1 Gearboxes for MachXO3L-640 and MachXO3L-1300. Removed DQS Groups (Bank 1) section. Changed VCCIO Pins Bank 1 values for MachXO3L-1300, MachXO3L-2100, MachXO3L-4300 and MachXO3L-6900 CSFBGA 256 package. Changed GND values for MachXO3L-1300, MachXO3L-2100, MachXO3L-4300 and MachXO3L-6900 CSFBGA 256 package. Changed NC values for MachXO3L-2100 and MachXO3L-4300 CSFBGA 324 package.	
			DC and Switching Characteristics	Updated the BLVDS section. Changed output impedance nominal values in Table 3-2, BLVDS DC Condition.
				Updated the LVPECL section. Changed output impedance nominal value in Table 3-3, LVPECL DC Condition.
		Updated the sysCONFIG Port Timing Specifications section. Updated INITN low time values.		
July 2014	1.1	DC and Switching Characteristics	Updated the Static Supply Current – C/E Devices section. Added devices.	
			Updated the Programming and Erase Supply Current – C/E Device section. Added devices.	
			Updated the sysIO Single-Ended DC Electrical Characteristics section. Revised footnote 4.	
			Added the NVCM Download Time section.	
			Updated the Typical Building Block Function Performance – C/E Devices section. Added information to footnote.	
		Pinout Information	Updated the Pin Information Summary section.	
		Ordering Information	Updated the MachXO3L Part Number Description section. Added packages.	
Updated the Ordering Information section. General update.
