Welcome to E-XFL.COM

Understanding Embedded - FPGAs (Field Programmable Gate Array)

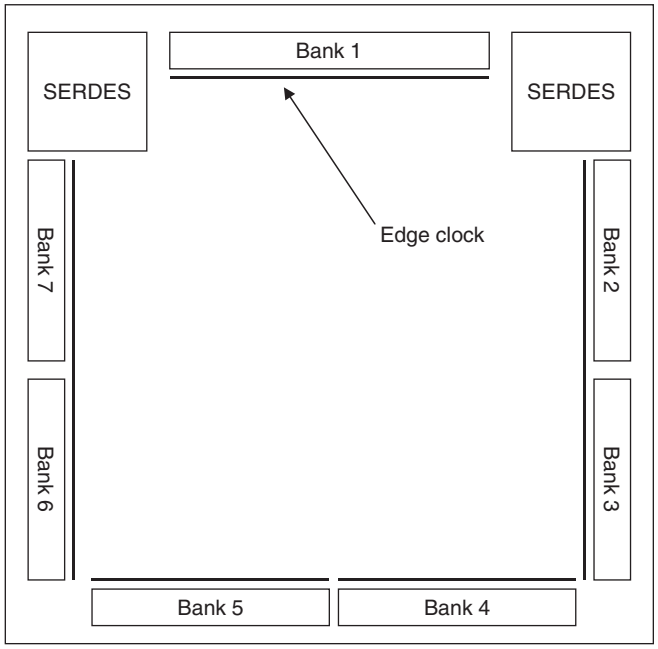
Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details	
Product Status	Obsolete
Number of LABs/CLBs	10000
Number of Logic Elements/Cells	40000
Total RAM Bits	4075520
Number of I/O	562
Number of Gates	-
Voltage - Supply	0.95V ~ 1.26V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 105°C (TJ)
Package / Case	1020-BBGA, FCBGA
Supplier Device Package	1020-OFcBGA Rev 2 (33x33)
Purchase URL	https://www.e-xfl.com/product-detail/lattice-semiconductor/lfsc3ga40e-5ffa1020i

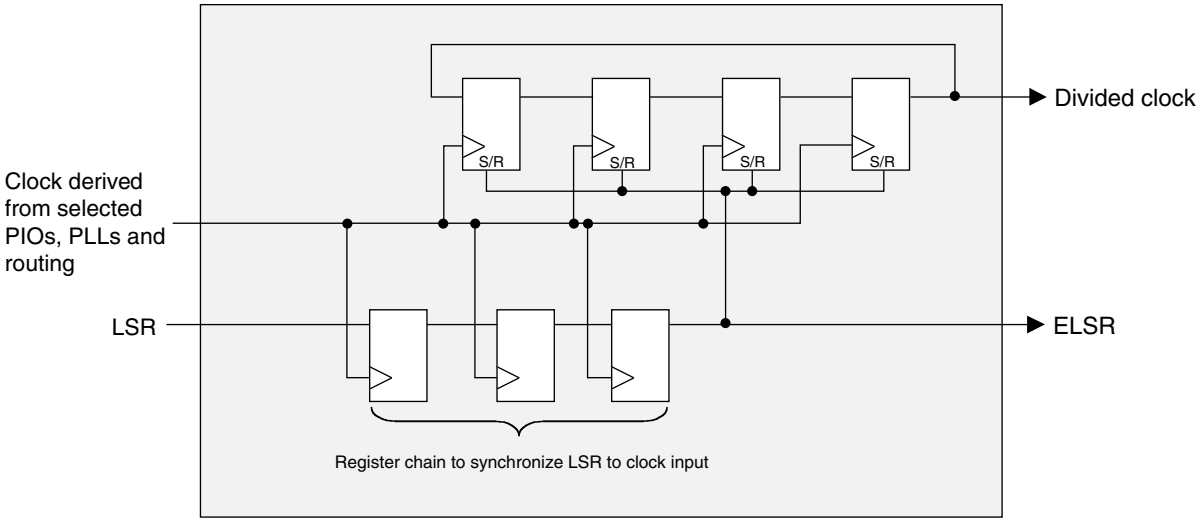
Figure 2-7. Edge Clock Resources



Precision Clock Divider

Each set of edge clocks has four high-speed dividers associated with it. These are intended for generating a slower speed system clock from the high-speed edge clock. The block operates in a DIV2 or DIV4 mode and maintains a known phase relationship between the divided down clock and high-speed clock based on the release of its reset signal. The clock dividers can be fed from selected PIOs, PLLs and routing. The clock divider outputs serve as primary clock sources. This circuit also generates an edge local set/reset (ELSR) signal which is fed to the PIOs via the edge clock network and is used for the rest of the I/O gearing logic.

Figure 2-8. Clock Divider Circuit



Dynamic Clock Select (DCS)

The DCS is a global clock buffer with smart multiplexer functions. It takes two independent input clock sources and outputs a clock signal without any glitches or runt pulses. This is achieved irrespective of where the select signal is

PURESPEED I/O Buffer Banks

LatticeSC devices have seven PURESPEED I/O buffer banks; each is capable of supporting multiple I/O standards. Each PURESPEED I/O bank has its own I/O supply voltage (V_{CCIO}), and two voltage references V_{REF1} and V_{REF2} resources allowing each bank to be completely independent from each other. Figure 2-26 shows the seven banks and their associated supplies. Table 2-7 lists the maximum number of I/Os per bank for the whole LatticeSC family.

In the LatticeSC devices, single-ended output buffers and ratioed input buffers (LVTTL, LVCMOS, PCI33 and PCIX33) are powered using V_{CCIO}. In addition to the bank V_{CCIO} supplies, the LatticeSC devices have a V_{CC} core logic power supply, and a V_{CCAUX} supply that power all differential and referenced buffers. VCCAUX also powers a predriver of single-ended output buffers to enhance buffer performance.

Each bank can support up to two separate VREF voltages, VREF1 and VREF2 that set the threshold for the referenced input buffers. In the LatticeSC devices any I/O pin in a bank can be configured to be a dedicated reference voltage supply pin. Each I/O is individually configurable based on the bank's supply and reference voltages.

Differential drivers have user selectable internal or external bias. External bias is brought in by the VREF1 pin in the bank. External bias for differential buffers is needed for applications that requires tighter than standard output common mode range.

Since a bank can have only one external bias circuit for differential drivers, LVDS and RSDS differential outputs can be mixed in a bank.

If a differential driver is configured in a bank, one pin in that bank becomes a DIFFR pin. This DIFFR pin must be connected to ground via an external 1K +/-1% ohm resistor. Note that differential drivers are not supported in banks 1, 4 and 5.

In addition, there are dedicated Terminating Supply (V_{TT}) pins to be used as terminating voltage for one of the two ways to perform parallel terminations. These V_{TT} pins are available in banks 2-7, these pins are not available in some packages. When VTT termination is not required, or used to provide the common mode termination voltage (VCMT), these pins can be left unconnected on the device. If the internal or external VCMT function for differential input termination is used, the VTT pins should be unconnected and allowed to float.

There are further restrictions on the use of V_{TT} pins, for additional details refer to technical information at the end of this data sheet.

Differential HSTL and SSTL

Differential HSTL and SSTL outputs are implemented as a pair of complementary single-ended outputs. All allowable single-ended output classes (class I and class II) are supported in this mode.

MLVDS

The LatticeSC devices support the MLVDS standard. This industry standard is emulated using controlled impedance complementary LVCMOS outputs in conjunction with a parallel external resistor across the driver outputs. MLVDS is intended for use when multi-drop and bi-directional multi-point differential signaling is required. The scheme shown in Figure 3-1 is one possible solution for bi-directional multi-point differential signals.

Figure 3-1. MLVDS Multi-Point Output Example

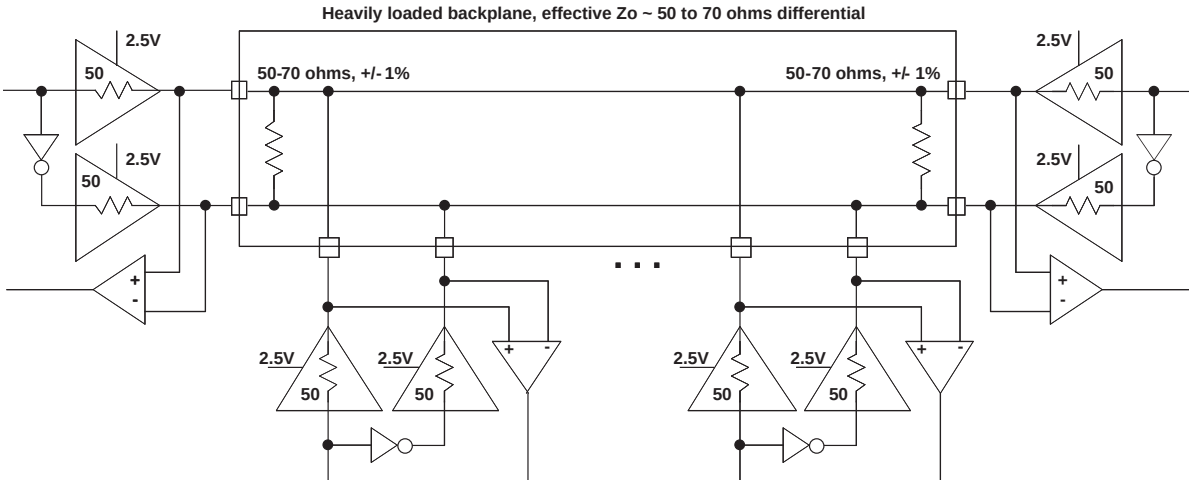


Table 3-1. MLVDS DC Conditions[1]

Over Recommended Operating Conditions

Symbol	Description	Nominal		Units
		Zo = 50	Zo = 70	
Z_{OUT}	Output impedance	50	50	ohm
R_{TLEFT}	Left end termination	50	70	ohm
R_{TRIGHT}	Right end termination	50	70	ohm
V_{OH}	Output high voltage	1.50	1.575	V
V_{OL}	Output low voltage	1.00	0.925	V
V_{OD}	Output differential voltage	0.50	0.65	V
V_{CM}	Output common mode voltage	1.25	1.25	V
I_{DC}	DC output current	20.0	18.5	mA

1. For input buffer, see LVDS table.

Date	Version	Section	Change Summary
March 2007 (cont.)	01.5 (cont.)	DC and Switching Characteristics (cont.)	Updated LatticeSC Internal Timing Parameters with ispLEVER 6.1 SP1 results.
			Updated t_{FDEL} and t_{CDEL} specifications.
			Updated LatticeSC Family Timing Adders with ispLEVER 6.1 SP1 results.
			Updated PLL specifications to expand frequency range down to 2 MHz and break out jitter for the different ranges.
			Added footnote to sysCLOCK PLL Timing table specifying the conditions for the jitter measurements.
			Added t_{DLL} specification to sysCLOCK DLL Timing table.
			Added footnote to sysCLOCK DLL Timing table specifying the conditions for the jitter measurements.
			Added sysCONFIG Master Parallel Configuration Mode and sysCONFIG SPI Port to LatticeSC sysCONFIG Port Timing table.
		Pin Information	Updated Pin Information Summary with SC40 information.
			Updated LFSC25 Logic Signal Connections: FF1020 with SC40 information.
			Updated LFSC80 Logic Signal Connections: FC1152 with SC40 information.
August 2007	01.6	General	Changed references of "HDC" to "HDC/SI".
			Changed references of "LDCN" to "LDCN/SCS".
			Changed references of "BUSYN/RCLK" to "BUSYN/RCLK/SCK".
			Changed references of "RDCFGN" to "TSALLN".
			Changed references of "TDO/RDDATA" to "TDO".
		Architecture	Updated text in Ripple Mode section.
			Added information to Global Set/Reset.
			Added information for Spread Spectrum Clocking
			Modified information for PLL/DLL Cascading. DLL to PLL is now supported.
			Modified AIL Block text and figure.
			Modified Figure 2-20 DDR/Shift Register Block.
			Added Information to Hot Socketing.
			Added new information for I/O Architecture Rules.
			Added information to SERDES Power Supply Sequencing Requirements.
		DC and Switching Characteristics	Added footnote to Hot Socketing Specifications table.
			Modified Initialization and Standby Supply Current table.
			Modified GSR Timing table.
			Modified sysCLOCK DLL Timing table to include $I_{DUTY.}$
			Deleted Readback Timing information from sysCONFIG Port Timing table.
			Modified data in External Switching Characteristics table.
		Pin Information	Added information to the Signal Descriptions table for HDC/SI, LDCN/SCS.
			Added footnote to Signal Descriptions table.
			Modified Description for signal BUSYN/RCLK/SCK.
			Modified data in Pin Information Summary and device-specific Pinout Information tables.

Date	Version	Section	Change Summary
September 2007	01.7	Pinout Information	Added Thermal Management text section.
		Supplemental Information	Updated title list.
November 2007	01.8	Ordering Information	Removed -7 speed grade information for 115K LUT devices in the Ordering Information tables.
January 2008	01.9	Introduction	Corrections/Additions to memory controller list (Tables 1-2).
		Architecture	AIL Overview – Modified power used by AIL block.
			PURESPEED I/O Buffer Banks – Modified VTT termination info. Added info about complimentary drivers for all banks.
			Supported Source Synchronous Interfaces – Modified data for DDRII in Table 2-11.
		DC and Switching Characteristics	Recommended Operating Conditions – Changed footnote 3.
			Initialization and Standby Supply Current – Inserted a paragraph with info regarding the table. Also updated the table.
			Typical Building Block Function Performance – Added VCC=1.2V=1.2V+/-5% above Pin to Pin Performance table.
			LatticeSC External Switching Characteristics – Added VCC=1.2V=1.2V+/-5% above table. Reworded footnote 3.
			LatticeSC Family Timing Adders – Added VCC=1.2V=1.2V+/-5% above table.
			LatticeSC Internal Timing Parameters – Added VCC=1.2V=1.2V+/-5% above table. Reworded footnote 1.
			GSR Timing – Added a new table for Internal System Bus Timing after GSR Timing.
			LatticeSC sysCONFIG Port Timing – Corrected sysCONFIG SPI Port information.
		Pinout Information	Signal Descriptions – Modified info for VTT_x, PROBE_VCC, and PROBE_GND. Modified info for [LOC]_DLL[T,C]_IN[C,D,E,F].
		Supplemental Information	Updated list of technical notes, added reference to LatticeSC/M flexiPCS Data Sheet.
March 2008	02.0	DC and Switching Characteristics	Updated Internal Timing Parameters table.
			Updated Read Mode timing diagram.
			Updated Read Mode with Input Registers Only timing diagram.
June 2008	02.1	—	Data sheet status changed from preliminary to final.
		Architecture	Removed Read-Before-Write sysMEM EBR mode.
		DC and Switching Characteristics	Updated LatticeSC/M External Switching Characteristics table.
			Updated LatticeSC/M Internal Timing Parameters table.
			Removed Read-Before-Write sysMEM EBR mode.
December 2008	02.2	Architecture	Output/Tristate DDR/Shift Register Block Diagram - corrected connection to POS.
		DC and Switching Characteristics	DC and Switching Characteristics table - updated data for $t_{SUI\_PIO.}$
			Added $T_{R,}$ T_F parameter to PURESPEED I/O Differential Electrical Characteristics (LVDS) table.
		Multiple	Removed references to HyperTransport throughout the data sheet.
January 2010	02.3	Introduction	Updated per PCN #01A-10 (ceramic fcBGA conversion to organic fcBGA for the 1152-ball and 1704-ball fcBGA packages) and PCN #02A-10 (1020-ball organic fcBGA conversion to 1020-ball organic fcBGA revision 2 package).
		Ordering Information
