

Welcome to [E-XFL.COM](#)

Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

Details

Product Status	Obsolete
Number of LABs/CLBs	10000
Number of Logic Elements/Cells	40000
Total RAM Bits	4075520
Number of I/O	604
Number of Gates	-
Voltage - Supply	0.95V ~ 1.26V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	1152-BBGA
Supplier Device Package	1152-FPBGA (35x35)
Purchase URL	https://www.e-xfl.com/product-detail/lattice-semiconductor/lfsc3ga40e-5ffn1152c

Table 1-1. LatticeSC Family Selection Guide¹

Device	SC15	SC25	SC40	SC80	SC115
LUT4s (K)	15	25	40	80	115
sysMEM Blocks (18Kb)	56	104	216	308	424

3. Ceramic fcBGA converted to organic fcBGA per [PCN #01A-10](#).

The LatticeSCM devices add MACO-enabled IP functionality to the base LatticeSC devices. Table 1-2 shows the type and number of each pre-engineered IP core.

Table 1-2. LatticeSCM Family

Device	SCM15	SCM25	SCM40	SCM80	SCM115
flexiMAC Blocks • 1GbE Mode • 10GbE Mode • PCI Express Mode	1	2	2	2	4
SPI4.2 Blocks	1	2	2	2	2
Memory Controller Blocks • DDR/DDR2 DRAM Mode • QDR II/II+ SRAM Mode • RLDRAM I • RLDRAM II CIO/SIO	1	2	2	2	2
Low-Speed CDR Blocks	0	0	2	2	2
PCI Express LTSSM (PHY) Blocks	1	0	2	2	2

Note: See each IP core user's guide for more information about support for specific LatticeSCM devices.

Introduction

The LatticeSC family of FPGAs combines a high-performance FPGA fabric, high-speed SERDES, high-performance I/Os and large embedded RAM in a single industry leading architecture. This FPGA family is fabricated in a state of the art technology to provide one of the highest performing FPGAs in the industry.

This family of devices includes features to meet the needs of today's communication network systems. These features include SERDES with embedded advance PCS (Physical Coding sub-layer), up to 7.8 Mbits of sysMEM embedded block RAM, dedicated logic to support system level standards such as RAPIDIO, SPI4.2, SFI-4, UTO-PIA, XGMII and CSIX. The devices in this family feature clock multiply, divide and phase shift PLLs, numerous

Modes of Operation

Each Slice is capable of four modes of operation: Logic, Ripple, RAM and ROM. Table 2-2 lists the modes and the capability of the Slice blocks.

Table 2-2. Slice Modes

	Logic	Ripple	RAM	ROM
PFU Slice	LUT 4x2 or LUT 5x1	2-bit Arithmetic Unit	SPR 16x2 DPR 16x2	ROM 16x2

Logic Mode

In this mode, the LUTs in each Slice are configured as combinatorial lookup tables. A LUT4 can have 16 possible input combinations. Any logic function with four inputs can be generated by programming this lookup table. Since there are two LUT4s per Slice, a LUT5 can be constructed within one Slice. Larger lookup tables such as LUT6, LUT7 and LUT8 can be constructed by concatenating other Slices in the PFU.

Ripple Mode

Ripple mode allows the efficient implementation of small arithmetic functions. In ripple mode, the following functions can be implemented by each Slice:

- Addition 2-bit
- Subtraction 2-bit
- Up counter 2-bit
- Down counter 2-bit
- Comparator functions of A and B inputs
 - A greater-than-or-equal-to B
 - A not-equal-to B
 - A less-than-or-equal-to B

Ripple Mode includes an optional configuration that performs arithmetic using fast carry chain methods. In this configuration (also referred to as CCU2 mode) two additional signals, Carry Generate and Carry Propagate, are generated on a per slice basis to allow fast arithmetic functions to be constructed by concatenating Slices.

RAM Mode

In this mode, distributed RAM can be constructed using each LUT block as a 16x1-bit memory. Through the combination of LUTs and Slices, a variety of different memories can be constructed.

The Lattice design tools support the creation of a variety of different size memories. Where appropriate, the software will construct these using distributed memory primitives that represent the capabilities of the Slice. Table 2-3 shows the number of Slices required to implement different distributed RAM primitives. Dual port memories involve the pairing of two Slices, one Slice functions as the read-write port. The other companion Slice supports the read-only port. For more information on RAM mode, please see details of additional technical documentation at the end of this data sheet.

Table 2-3. Number of Slices Required For Implementing Distributed RAM

	SPR16x2	DPR16x2
Number of Slices	1	2

Note: SPR = Single Port RAM, DPR = Dual Port RAM

ROM Mode

The ROM mode uses the same principal as the RAM modes, but without the Write port. Pre-loading is accomplished through the programming interface during configuration.

- 8-bit SERDES Only
- 10-bit SERDES Only
- SONET (STS-12/STS-48)
- Gigabit Ethernet
- Fibre Channel
- XAUI
- Serial RapidIO
- PCI-Express
- Generic 8b10b

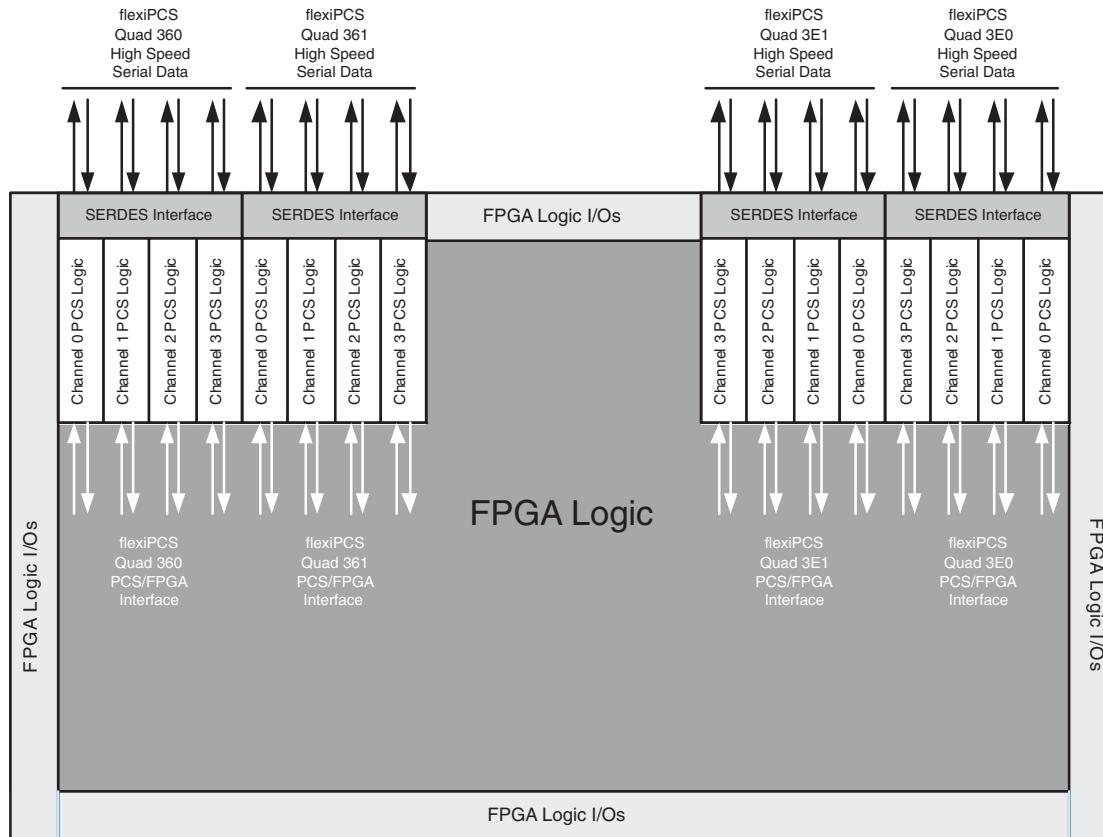

flexiPCS Quad

The flexiPCS logic is arranged in quads containing logic for four independent full-duplex data channels. Each device in the LatticeSC family has up to eight quads of flexiPCS logic. The LatticeSC Family Selection Guide table on the first page of this data sheet contains the number of flexiPCS channels present on the chip. Note that in some packages (particularly lower pin count packages), not all channels from all quads on a given device may be bonded to package pins.

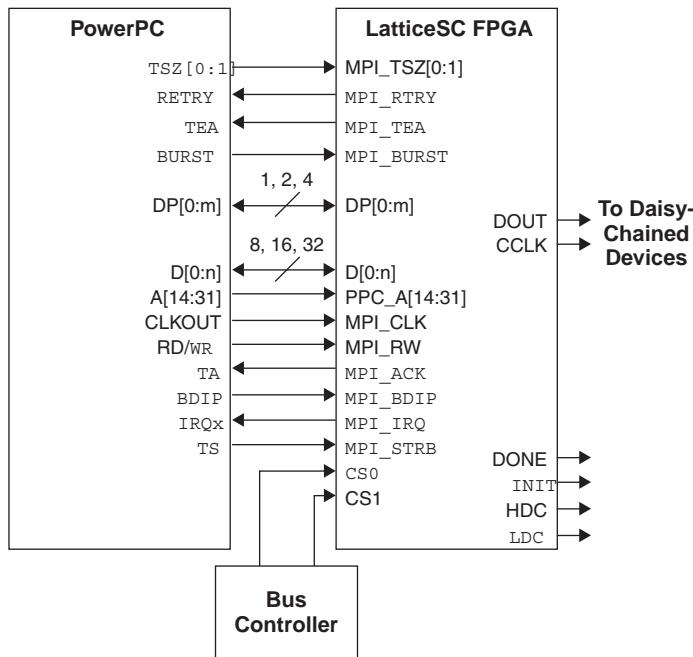

Each quad supports up to four channels of full-duplex data and can be programmed into any one of several protocol based modes. Each quad requires its own reference clock which can be sourced externally or from the FPGA logic. The user can utilize between one and four channels in a quad, depending on the application.

Figure 2-30 shows an example of four flexiPCS quads in a LatticeSC device. Quads are labeled according to the address of their software controlled registers.

Figure 2-30. LatticeSC flexiPCS

Since each quad has its own reference clock, different quads can support different standards on the same chip. This feature makes the LatticeSC family of devices ideal for bridging between different standards.

Figure 2-32. PowerPCI and MPI Schematic

Configuration and Testing

The following section describes the configuration and testing features of the LatticeSC family of devices.

IEEE 1149.1-Compliant Boundary Scan Testability

All LatticeSC devices have boundary scan cells that are accessed through an IEEE 1149.1 compliant test access port (TAP). This allows functional testing of the circuit board, on which the device is mounted, through a serial scan path that can access all critical logic nodes. Internal registers are linked internally, allowing test data to be shifted in and loaded directly onto test nodes, or test data to be captured and shifted out for verification. The test access port consists of dedicated I/Os: TDI, TDO, TCK and TMS. The test access port has its own supply voltage V_{CCJ} and can operate with LVCMOS33, 25 and 18 standards. For additional detail refer to technical information at the end of the data sheet.

Device Configuration

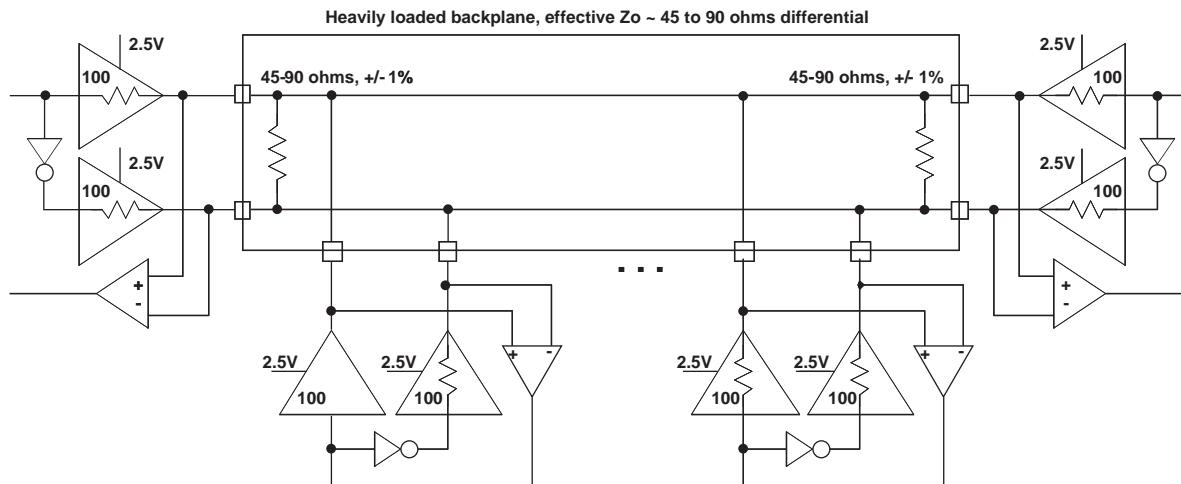

All LatticeSC devices contain three possible ports that can be used for device configuration. The serial port, which supports bit-wide configuration, and the sysCONFIG port that supports both byte-wide and serial configuration. The MPI port supports 8-bit, 16-bit or 32-bit configuration.

The serial port supports both the IEEE Std. 1149.1 Boundary Scan specification and the IEEE Std. 1532 In-System Configuration specification. The sysCONFIG port is a 20-pin interface with six of the I/Os used as dedicated pins and the rest being dual-use pins. When sysCONFIG mode is not used, these dual-use pins are available for general purpose I/O. All I/Os for the sysCONFIG and MPI ports are in I/O bank #1.

On power-up, the FPGA SRAM is ready to be configured with the sysCONFIG port active. The IEEE 1149.1 serial mode can be activated any time after power-up by sending the appropriate command through the TAP port. Once a configuration port is selected, that port is locked and another configuration port cannot be activated until the next re-initialization sequence. For additional detail refer to technical information at the end of the data sheet.

BLVDS

The LatticeSC devices support BLVDS standard. This standard is emulated using controlled impedance complementary LVCMOS outputs in conjunction with a parallel external resistor across the driver outputs. BLVDS is intended for use when multi-drop and bi-directional multi-point differential signaling is required. The scheme shown in Figure 3-2 is one possible solution for bi-directional multi-point differential signals.

Figure 3-2. BLVDS Multi-point Output Example**Table 3-2. BLVDS DC Conditions¹****Over Recommended Operating Conditions**

Symbol	Description	Nominal		Units
		$Z_o = 45$	$Z_o = 90$	
Z_{out}	Output impedance	100	100	ohm
R_{TLEFT}	Left end termination	45	90	ohm
R_{TRIGHT}	Right end termination	45	90	ohm
V_{OH}	Output high voltage	1.375	1.48	V
V_{OL}	Output low voltage	1.125	1.02	V
V_{OD}	Output differential voltage	0.25	0.46	V
V_{CM}	Output common mode voltage	1.25	1.25	V
I_{DC}	DC output current	11.2	10.2	mA

Date	Version	Section	Change Summary
August 2006 (cont.)	01.3 (cont.)	DC and Switching Characteristics (cont.)	Updated LatticeSC Family Timing Adders with ispLEVER 6.0 SP1 results
			Updated PLL Timing Parameters based on PDE testing results
			Removed RDDATA parameter from sysCONFIG readback timing table
		Multiple	Changed TDO/RDDATA to TDO
		Pinout Information	Removed all MPI signals from SC15 256 pin package Dual Function Column
			Added note to SC15, SC25 900 pin package that the package supports a 16 bit MPI
			Added note that pin D3 in an SC15 and SC25 900 pin package should not be used for single-ended outputs
			Added note that pin D28 in an SC15 and SC25 900 pin package should not be used for single-ended outputs
			Added note to SC25 1020 pin package that the package supports a 16 bit MPI
			Added note to SC80 1152 pin package that the package supports a 32 bit MPI
			Added note to SC80 1704 pin package that the package supports a 32 bit MPI
		Ordering Information	Changed "fcBGA" for the 1020 packages to "ffBGA"
November 2006	01.4	Introduction	LatticeSC Family Selection Guide table – I/O count for SC80 device, 1704 fcBGA package changed to 904/32. I/O count for SC115 device, 1704 fcBGA package changed to 942/32.
		DC and Switching Characteristics	DC Electrical Characteristics table – Updated the initialization and standby supply current values.
			DC Electrical Characteristics table – Updated the sysCONFIG Master Parallel mode RCLK low and RCLK high time specifications.
			DC Electrical Characteristics table – Updated VCCIO values for LVPECL33 I/Os.
		Pin Information	Pin Information Summary table - Changed number of single ended user I/Os from 906 to 904 for 1704 fcBGA.
			Removed the single-ended only output restriction on pins D3 and D28 in an SC15 and SC25 900 pin package.
		Ordering Information	Ordering Information tables - Changed number of I/Os from 906 to 904 for 1704 fcBGA.
			Added ordering part numbers for LatticeSC/SCM 40K and 115K LUT devices.
			Added lead-free ordering part numbers.
		Multiple	Changed number of available SC80 I/O from 906 to 904.
			Changed number of available SC115 I/O from 944 to 942.
January 2007	01.4a	Architecture	Added EBR Asynchronous Reset section.
February 2007	01.4b	Architecture	Updated EBR Asynchronous Reset section.
March 2007	01.5	Architecture	Added EBR asynchronous reset clarification
			Clarified that differential drivers are not supported in banks 1, 4 and 5
		DC and Switching Characteristics	Added clarification for the description of the junction temperature specification in the Absolute Maximum Ratings section.
			Updated Initialization and Standby Current table.
			Updated LatticeSC External Switching Characteristics with ispLEVER 6.1 SP1 results.

Date	Version	Section	Change Summary
December 2011	02.4	DC and Switching Characteristics	Updated JTAG Port Timing Specifications table.
