Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

LatticeSC/M Family Data Sheet Architecture

December 2008 **Data Sheet DS1004**

Architecture Overview

The LatticeSC architecture contains an array of logic blocks surrounded by Programmable I/O Cells (PIC). Interspersed between the rows of logic blocks are rows of sysMEM Embedded Block RAM (EBR). The upper left and upper right corners of the devices contain SERDES blocks and their associated PCS blocks, as show in Figure 2-1.

Top left and top right corner of the device contain blocks of SERDES. Each block of SERDES contains four channels (quad). Each channel contains a single serializer and de-serializer, synchronization and word alignment logic. The SERDES quad connects with the Physical Coding Sub-layer (PCS) blocks that contain logic to simultaneously perform alignment, coding, de-coding and other functions. The SERDES quad block has separate supply, ground and reference voltage pins.

The PICs contain logic to facilitate the conditioning of signals to and from the I/O before they leave or enter the FPGA fabric. The block provides DDR and shift register capabilities that act as a gearbox between high speed I/O and the FPGA fabric. The blocks also contain programmable Adaptive Input Logic that adjusts the delay applied to signals as they enter the device to optimize setup and hold times and ensure robust performance.

sysMEM EBRs are large dedicated fast memory blocks. They can be configured as RAM, ROM or FIFO. These blocks have dedicated logic to simplify the implementation of FIFOs.

The PFU, PIC and EBR blocks are arranged in a two-dimensional grid with rows and columns as shown in Figure 2-1. These blocks are connected with many vertical and horizontal routing channel resources. The place and route software tool automatically allocates these routing resources.

The corners contain the sysCLOCK Analog Phase Locked Loop (PLL) and Delay Locked Loop (DLL) Blocks. The PLLs have multiply, divide and phase shifting capability; they are used to manage the phase relationship of the clocks. The LatticeSC architecture provides eight analog PLLs per device and 12 DLLs. The DLLs provide a simple delay capability and can also be used to calibrate other delays within the device.

Every device in the family has a JTAG Port with internal Logic Analyzer (ispTRACY) capability. The sysCONFIG™ port which allows for serial or parallel device configuration. The system bus simplifies the connections of the external microprocessor to the device for tasks such as SERDES and PCS configuration or interface to the general FPGA logic. The LatticeSC devices use 1.2V as their core voltage operation with 1.0V operation also possible.

3. **Bottom Side (Banks 4 and 5)**
   These buffers can support LVCMOS standards up to 3.3V, including PCI33, PCI-X33 and SSTL-33. Differential receivers are provided on all PIO pairs but true HLVDS and RSDS differential drivers are not available. Adaptive input logic is available on PIOs A or C.

Table 2-8 lists the standards supported by each side.

Supported Standards

The LatticeSC PURESPEED I/O buffer supports both single-ended and differential standards. Single-ended standards can be further subdivided into LVCMOS, LVTTL and other standards. The buffers support the LVTTL, LVCMOS 12, 15, 18, 25 and 33 standards. In the LVCMOS and LVTTL modes, the buffer has individually configurable options for drive strength, termination resistance, bus maintenance (weak pull-up, weak pull-down, or a bus-keeper latch) and open drain. Other single-ended standards supported include SSTL, HSTL, GTL (input only), GTL+ (input only), PCI33, PCIX33, PCIX15, AGP-1X33 and AGP-2X33. Differential standards supported include LVDS, RSDS, BLVDS, MLVDS, LVPECL, differential SSTL and differential HSTL. Tables 12 and 13 show the I/O standards (together with their supply and reference voltages) supported by the LatticeSC devices. The tables also provide the available internal termination schemes. For further information on utilizing the PURESPEED I/O buffer to support a variety of standards please see details of additional technical documentation at the end of this data sheet.

Signal Descriptions (Cont.)

Signal Name	I/O	Description
RESP_[ULC/URC]	—	Calibration resistor to be placed between this pin and either ground or RESPN_[ULC/URC]. RESPN_[ULC/URC] is available on select packages. If available, connection of calibration resistor between RESP_[ULC/URC] and RESPN_[ULC/URC] takes precedence over connection of calibration resistor between RESP_[ULC/URC] and ground. Note: only one per side of the device. Value: 4.02K ohm +/- 1% ohm.
RESPN_[ULC/URC]	—	Available on selected packages. If available, calibration resistor should be placed between RESP_[ULC/URC] and RESPN_[ULC/URC] instead of between RESP_[ULC/URC] and ground. Note: only one per side of the device. Value: 4.02K ohm +/- 1% ohm.
[A:D]_VDDIBx_[L/R]	—	Input buffer power supply for channel x (1.2V/1.5V) on left [L] or right [R] side of device.
[A:D]_VDDOBx_[L/R]	—	Output buffer power supply for channel x (1.2V/1.5V) on left [L] or right [R] side of device.
[A:D]_VDDAX25_[L/R]	—	Auxiliary power for input and output termination (2.5V) on left [L] or right [R] side of device.

1. The ispLEVER software tools may specify VDDRX, VDDTX, VDDP and VCCL pins. These pins should be considered VCC12 pins.
Note: Signals listed as Signal A / Signal B define the same physical pin that is used for different functions based on configuration mode.
