## Understanding **Embedded - FPGAs (Field Programmable Gate Array)**

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

## **Applications of Embedded - FPGAs**

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

### **Details**

Product Status	Obsolete
Number of LABs/CLBs	10000
Number of Logic Elements/Cells	40000
Total RAM Bits	4075520
Number of I/O	562
Number of Gates	-
Voltage - Supply	0.95V ~ 1.26V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	1020-BBGA, FCBGA
Supplier Device Package	1020-OFCBGA (33x33)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/lattice-semiconductor/lfsc3ga40e-6ffn1020c">https://www.e-xfl.com/product-detail/lattice-semiconductor/lfsc3ga40e-6ffn1020c</a>

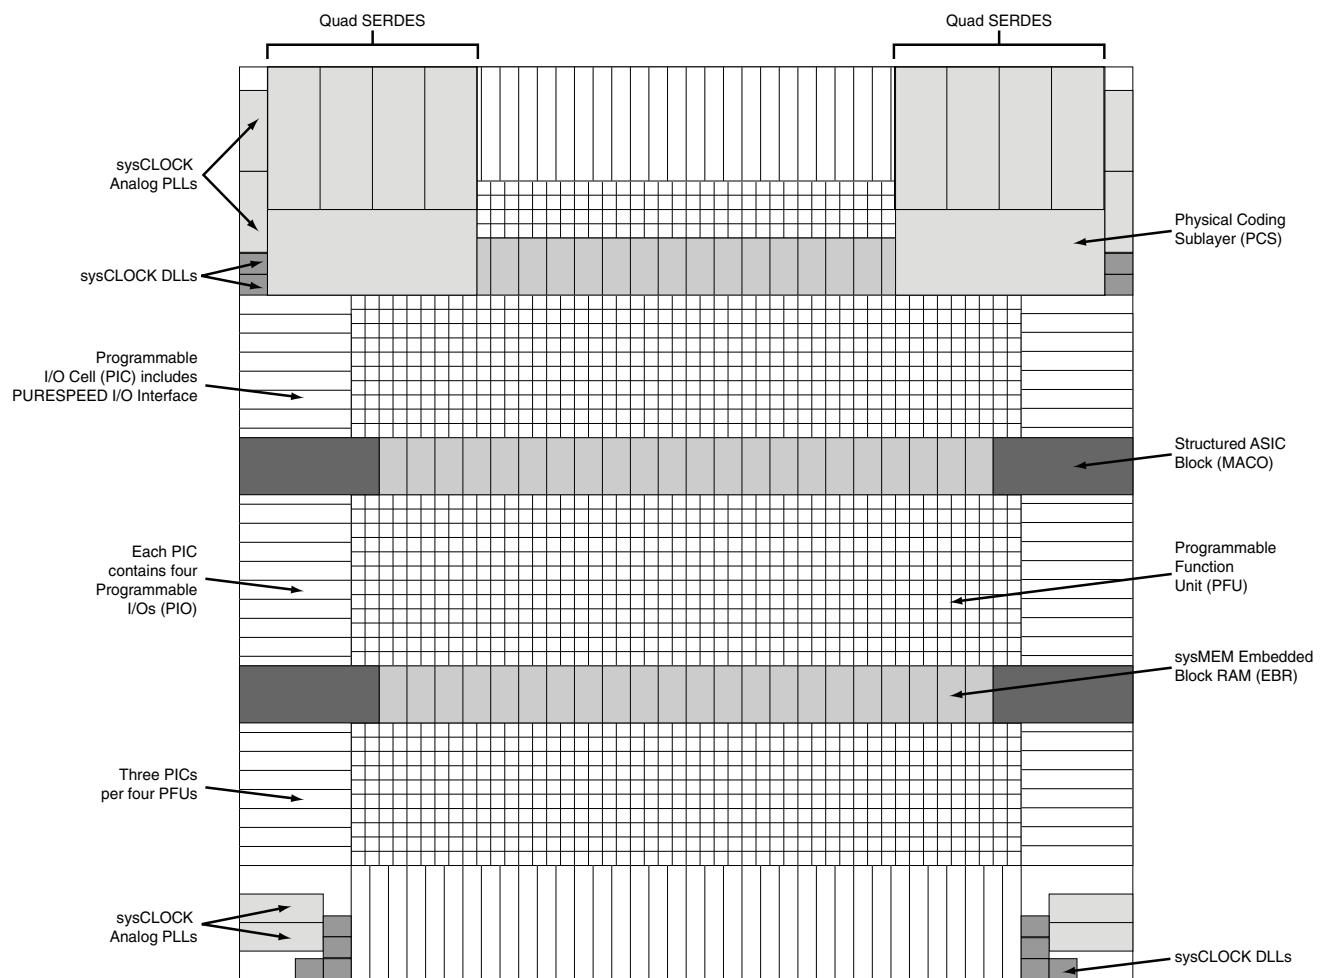

**Figure 2-1. Simplified Block Diagram (Top Level)**

Figure 2-17. PIC Diagram

\*AIL only on A or C pads located on the left, right and bottom of the device.

The A/B PIOs on the left and the right of the device can be paired to form a differentiated driver. The A/B and C/D PIOs on all sides of the device can be paired to form differential receivers. Either A or C PIOs on all sides except the one on top also provide a connection to an adaptive input logic capability that facilitates the implementation of

**Figure 2-21. Input DDR/Shift Register Block**

## Output Register Block

The output register block provides the ability to register signals from the core of the device before they are passed to the PURESPEED I/O buffers. The block contains a register for SDR operation and a group of registers for DDR and shift register operation. The output signal (DO) can be derived directly from one of the inputs (bypass mode), the SDR register or the DDR/shift register block. Figure 2-22 shows the diagram of the Output Register Block.

### Output SDR Register/Latch Block

The SDR register operates on the positive edge of the high-speed clock. It has clock enable that is driven by the clock enable output signal generated by the control MUX. In addition it has a variety of programmable options for set/reset including, set or reset, asynchronous or synchronous Local Set Reset LSR (LSR has precedence over CE) and Global Set Reset GSR enable or disable. The register LSR input is driven from LSRO, which is generated from the PIO control MUX. The GSR inputs is driven from the GSR output of the PIO control MUX, which allows the global set-reset to be disabled on a PIO basis.

### Output DDR/Shift Block

The DDR/Shift block contains registers and associated logic that support DDR and shift register functions using the high-speed clock and the associated transfer from the low-speed clock domain. It functions as a gearbox allowing low-speed parallel data from the FPGA fabric be output as a higher speed serial stream. Each PIO supports DDR and x2 shift functions. If desired PIOs A and B or C and D can be combined to form x4 shift functions. Figure 2-22 shows a simplified block diagram of the shift register block.

## Density Shifting

The LatticeSC family has been designed to ensure that different density devices in the same package have the same pin-out. Furthermore, the architecture ensures a high success rate when performing design migration from lower density parts to higher density parts. In many cases, it is also possible to shift a lower utilization design targeted for a high-density device to a lower density device. However, the exact details of the final resource utilization will impact the likely success in each case.

**LatticeSC/M External Switching Characteristics<sup>3</sup>**

Over Recommended Commercial Operating Conditions at VCC = 1.2V +/- 5%

Parameter	Description	-7		-6		-5		Units
		Min.	Max.	Min.	Max.	Min.	Max.

1. No PLL delay tuning (clock injection removal mode, system clock feedback).

2. Using LVCMS25 12mA I/O. Timing adders for other supported I/O technologies are specified in the LatticeSC Family Timing Adders table.

3. Complete Timing Parameters for a user design are incorporated when running ispLEVER. This is a sampling of the key timing parameters.

Timing specs are for non-AI applications.

**LatticeSC/M sysCONFIG Port Timing**

Over Recommended Operating Conditions

Parameter	Description	Min.	Max.	Units
<b>General Configuration Timing</b>				
$t_{S MODE}$	M[3:0] Setup Time to INITN High	0	—	ns
$t_{H MODE}$	M[3:0] Hold Time from INITN High	600	—	ns
$t_{RW}$	RESETN Pulse Width Low to Start Reconfiguration (1.2 V)	50 (or 100 at 0.95V)	—	ns
$t_{PGW}$	PROGRAMN Pulse Width Low to Start Reconfiguration (1.2 V)	50 (or 100 at 0.95V)	—	ns
$f_{ESB\_CLK\_FRQ}$	System Bus ESB_CLK Frequency (No Wait States)	—	133	MHz
<b>sysCONFIG Master Parallel Configuration Mode</b>				
$t_{SMB}$	D[7:0] Setup Time to RCLK High	6	—	ns
$t_{HMB}$	D[7:0] Hold Time to RCLK High	0	—	ns
$t_{CLMB}$	RCLK Low Time (Non-compressed Bitstreams)	0.5	0.5	CCLK periods
	RCLK Low Time (Compressed Bitstreams)	0.5	7.5	CCLK periods
$t_{CHMB}$	RCLK High Time	0.5	0.5	CCLK periods
<b>sysCONFIG SPI Port</b>				
$t_{CFGX}$	INITN High to CSCK Low	—	80	ns

## Thermal Management

Thermal management is recommended as part of any sound FPGA design methodology. To assess the thermal characteristics of a system, Lattice specifies a maximum allowable junction temperature in all device data sheets. Designers must complete a thermal analysis of their specific design to ensure that the device and package do not exceed the junction temperature limits. Refer to the Thermal Management document to find the device/package specific thermal values.

## For Further Information

For further information regarding Thermal Management, refer to the following located on the Lattice website at [www.latticesemi.com](http://www.latticesemi.com).

- Thermal Management document
- Technical Note TN1101 - Power Estimation and Management for LatticeSC Devices
- Power Calculator tool included with Lattice's ispLEVER design tool, or as a standalone download from [www.latticesemi.com/software](http://www.latticesemi.com/software)

**Lead-Free Packaging****Commercial**

Part Number	Grade	Package	Balls	Temp.	LUTs (K)
