

Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "<u>Embedded -</u> <u>Microcontrollers</u>"

Details

Product Status	Active
Core Processor	PIC
Core Size	8-Bit
Speed	20MHz
Connectivity	-
Peripherals	Brown-out Detect/Reset, POR, WDT
Number of I/O	13
Program Memory Size	1.75KB (1K x 14)
Program Memory Type	OTP
EEPROM Size	-
RAM Size	96 x 8
Voltage - Supply (Vcc/Vdd)	2.5V ~ 5.5V
Data Converters	-
Oscillator Type	External
Operating Temperature	0°C ~ 70°C (TA)
Mounting Type	Surface Mount
Package / Case	18-SOIC (0.295", 7.50mm Width)
Supplier Device Package	18-SOIC
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/pic16c621at-20-so

Email: info@E-XFL.COM

Address: Room A, 16/F, Full Win Commercial Centre, 573 Nathan Road, Mongkok, Hong Kong

FIGURE 3-1: BLOCK DIAGRAM

4.2.2.1 STATUS Register

The STATUS register, shown in Register 4-1, contains the arithmetic status of the ALU, the RESET status and the bank select bits for data memory.

The STATUS register can be the destination for any instruction, like any other register. If the STATUS register is the destination for an instruction that affects the Z, DC or C bits, then the write to these three bits is disabled. These bits are set or cleared according to the device logic. Furthermore, the TO and PD bits are not writable. Therefore, the result of an instruction with the STATUS register as destination may be different than intended.

For example, CLRF STATUS will clear the upper-three bits and set the Z bit. This leaves the STATUS register as 000uuluu (where u = unchanged).

It is recommended, therefore, that only BCF, BSF, SWAPF and MOVWF instructions are used to alter the STATUS register, because these instructions do not affect any STATUS bit. For other instructions not affecting any STATUS bits, see the "Instruction Set Summary".

- Note 1: The IRP and RP1 bits (STATUS<7:6>) are not used by the PIC16C62X and should be programmed as '0'. Use of these bits as general purpose R/W bits is NOT recommended, since this may affect upward compatibility with future products.
 - 2: The <u>C and DC bits</u> operate as a Borrow and Digit Borrow out bit, respectively, in subtraction. See the SUBLW and SUBWF instructions for examples.

85h	TRISA	_	_	_	TRISA 4	TRISA 3	TRISA 2	TRISA 1	TRISA 0	1 1111	1 1111
1Fh	CMCON	C2OUT	C1OUT	_	_	CIS	CM2	CM1	CM0	00 0000	00 0000
9Fh	VRCON	VREN	VROE	VRR	_	VR3	VR2	VR1	VR0	000- 0000	000- 0000

Legend: — = Unimplemented locations, read as '0', u = unchanged, x = unknown

Note: Shaded bits are not used by PORTA.

9.2 Oscillator Configurations

9.2.1 OSCILLATOR TYPES

The PIC16C62X devices can be operated in four different oscillator options. The user can program two configuration bits (FOSC1 and FOSC0) to select one of these four modes:

- LP Low Power Crystal
- XT Crystal/Resonator
- HS High Speed Crystal/Resonator
- RC Resistor/Capacitor

9.2.2 CRYSTAL OSCILLATOR / CERAMIC RESONATORS

In XT, LP or HS modes, a crystal or ceramic resonator is connected to the OSC1 and OSC2 pins to establish oscillation (Figure 9-1). The PIC16C62X oscillator design requires the use of a parallel cut crystal. Use of a series cut crystal may give a frequency out of the crystal manufacturers specifications. When in XT, LP or HS modes, the device can have an external clock source to drive the OSC1 pin (Figure 9-2).

FIGURE 9-1: CRYSTAL OPERATION (OR CERAMIC RESONATOR) (HS, XT OR LP OSC CONFIGURATION)

See Table 9-1 and Table 9-2 for recommended values of C1 and C2.

Note: A series resistor may be required for AT strip cut crystals.

FIGURE 9-2: EXTERNAL CLOCK INPUT OPERATION (HS, XT OR LP OSC

TABLE 9-1:CAPACITOR SELECTION FOR
CERAMIC RESONATORS

R	anges Chara	~[]			
Mode	Freq	OSC1(C1)	OSC2(C2)		
ХТ	455 kHz 2.0 MHz 4.0 MHz	22 - 100 pF 15 - 68 pF 15 - 68 pF	82 - 100 pF 15 - 68 pF 15 - 68 pF		
HS	8.0 MHz 16.0 MHz 🔨	10-68 bF 10-22 pF	10 - 68 pF 10 - 22 pF		
Higher capacitance increases the stability of the oscil- lator but also increases the start-up time. These wabes are for design guidance only. Since each resonator has its own characteristics, the user should consult the resonator manufacturer for appropriate values of external components.					

TABLE 9-2: CAPACITOR SELECTION FOR CRYSTAL OSCILLATOR

Mode	Freq	OSC1(C1)	OSC2(C2)		
LP	32 kHz	68 - 100 pF	68 - 100 pF		
	200 kHz	15 - 30 pF	15 - 30 pF		
хт	100 kHz	68 - 150 pF	150 - 300 pF		
	2 MHz	15 - 30 pF	15 - 30 pF		
	4 MHz	15 - 30 pF	15 - 30 pF		
HS	8 MHz	15-30 pF	^V 15 - 30 pF		
	10 MHz	15-30 pF	15 - 30 pF		
	20 MHz 🔨	15-30 pF	15 - 30 pF		
Higher capacitance increases the stability of the oscillator but also increases the start-up time. These values are for design guidance only. Rs may be required in HS mode as well as XT mode to avoid overdriving crystals with low drive level specification. Since each crystal has its own characteristics, the user should consult the crystal manufacturer for appropriate values of external components.					

9.9 Code Protection

If the code protection bit(s) have not been programmed, the on-chip program memory can be read out for verification purposes.

Note:	Microchip	does	not	recommend	code
	protecting	windov	ved d	evices.	

9.10 ID Locations

Four memory locations (2000h-2003h) are designated as ID locations where the user can store checksum or other code identification numbers. These locations are not accessible during normal execution, but are readable and writable during Program/Verify. Only the Least Significant 4 bits of the ID locations are used.

9.11 In-Circuit Serial Programming™

The PIC16C62X microcontrollers can be serially programmed while in the end application circuit. This is simply done with two lines for clock and data and three other lines for power, ground and the programming voltage. This allows customers to manufacture boards with unprogrammed devices and then program the microcontroller just before shipping the product. This also allows the most recent firmware or a custom firmware to be programmed.

The device is placed into a Program/Verify mode by holding the RB6 and RB7 pins low, while raising the MCLR (VPP) pin from VIL to VIHH (see programming specification). RB6 becomes the programming clock and RB7 becomes the programming data. Both RB6 and RB7 are Schmitt Trigger inputs in this mode.

After RESET, to place the device into Programming/ Verify mode, the program counter (PC) is at location 00h. A 6-bit command is then supplied to the device. Depending on the command, 14-bits of program data are then supplied to or from the device, depending if the command was a load or a read. For complete details of serial programming, please refer to the PIC16C6X/7X/9XX Programming Specification (DS30228).

A typical In-Circuit Serial Programming connection is shown in Figure 9-19.

FIGURE 9-19:

	W = 1		W = 2 C = ?
Example 2:	Before Instruction		After Instruction
Example 2.	W = 2 $C = ?$		REG1= 1 W = 2 C = 1; result is positive
	After Instruction	Example 2:	Before Instruction
	W = 0 C = 1; result is zero		REG1= 2 W = 2
Example 3:	Before Instruction		C = ?
	W = 3 C = ?		After Instruction REG1= 0
	After Instruction		W = 2
	W = 0xFF	Example 3	C = 1; result is zero Before Instruction
	C – 0, result is negative		REG1= 1 W = 2 C = ?
			After Instruction
			REG1= 0xFF W = 2 C = 0; result is negative

SWAPF	Swap Ni	bbles in	f		
Syntax:	[label]	SWAPF	f,d		
Operands:	$\begin{array}{l} 0\leq f\leq 12\\ d\in [0,1] \end{array}$	27			
Operation:	(f<3:0>) - (f<7:4>) -	→ (dest< \rightarrow (dest<	7:4>), 3:0>)		
Status Affected:	None				
Encoding:	00	1110	dfff	Ē	ffff
Description:	register 'f 0, the res register. I placed in	ar and low " are excl sult is plac f 'd' is 1, register '	rend nange ced in the re f'.	d. If W sult i	or 'd' is s
Words:	1				
Cycles:	1				
Example	SWAPF	REG,	0		
	Before In	struction			
		REG1	=	0xA5	
	After Inst	ruction			
		REG1 W	= =	0xA5 0x5A	

TRIS	Load TRIS Register
Syntax:	[<i>label</i>] TRIS f
Operands:	$5 \le f \le 7$
Operation:	(W) \rightarrow TRIS register f;
Status Affected:	None
Encoding:	00 0000 0110 Offf
Description.	code compatibility with the PIC16C5X products. Since TRIS registers are readable and writable, the user can directly address them.
Words:	1
Cycles:	1
Example	
	To maintain upward compatibil- ity with future PICmicro [®] prod- ucts, do not use this instruction.

XORLW	Exclusive OR Literal with W					
Syntax:	[<i>label</i> XORLW k]					
Operands:	$0 \le k \le 255$					
Operation:	(W) .XOR. $k \rightarrow (W)$					
Status Affected:	Z					
Encoding:	11 1010 kkkk kkkk					
Description:	The contents of the W register are XOR'ed with the eight bit literal 'k'. The result is placed in the W register.					
Words:	1					
Cycles:	1					
Example:	XORLW 0xAF					
	Before Instruction					
	W = 0xB5					
	After Instruction					
	W = 0x1A					
XORWF	Exclusive OR W with f					
Syntax:	[<i>label</i>] XORWF f,d					
Operands:	$\begin{array}{l} 0 \leq f \leq 127 \\ d \in [0,1] \end{array}$					
Operation:	(W) .XOR. (f) \rightarrow (dest)					
Status Affected:	Z					
Encoding:	00 0110 dfff ffff					
Description:	Exclusive OR the contents of the W register with register 'f'. If 'd' is 0, the result is stored in the W register. If 'd' is 1, the result is stored back in register 'f'.					
Words:	1					
Cycles:	1					
Example	XORWF REG 1					
	Before Instruction					
	REG = 0xAF W = 0xB5					
	After Instruction					
	REG = 0x1A W = 0xB5					

11.0 DEVELOPMENT SUPPORT

The PICmicro[®] microcontrollers are supported with a full range of hardware and software development tools:

- Integrated Development Environment
 - MPLAB® IDE Software
- Assemblers/Compilers/Linkers
 - MPASM[™] Assembler
 - MPLAB C17 and MPLAB C18 C Compilers
 - MPLINK[™] Object Linker/ MPLIB[™] Object Librarian
 - MPLAB C30 C Compiler
 - MPLAB ASM30 Assembler/Linker/Library
- · Simulators
 - MPLAB SIM Software Simulator
- MPLAB dsPIC30 Software Simulator
- Emulators
 - MPLAB ICE 2000 In-Circuit Emulator
 - MPLAB ICE 4000 In-Circuit Emulator
- In-Circuit Debugger
- MPLAB ICD 2
- Device Programmers
 - PRO MATE® II Universal Device Programmer
 - PICSTART[®] Plus Development Programmer
- Low Cost Demonstration Boards
 - PICDEM[™] 1 Demonstration Board
 - PICDEM.net[™] Demonstration Board
 - PICDEM 2 Plus Demonstration Board
 - PICDEM 3 Demonstration Board
 - PICDEM 4 Demonstration Board
 - PICDEM 17 Demonstration Board
 - PICDEM 18R Demonstration Board
 - PICDEM LIN Demonstration Board
 - PICDEM USB Demonstration Board
- Evaluation Kits
 - KEELOQ®
 - PICDEM MSC
 - microID®
 - CAN
 - PowerSmart®
 - Analog

11.1 MPLAB Integrated Development Environment Software

The MPLAB IDE software brings an ease of software development previously unseen in the 8/16-bit microcontroller market. The MPLAB IDE is a Windows[®] based application that contains:

- · An interface to debugging tools
 - simulator
 - programmer (sold separately)
 - emulator (sold separately)
 - in-circuit debugger (sold separately)
- · A full-featured editor with color coded context
- · A multiple project manager
- Customizable data windows with direct edit of contents
- · High level source code debugging
- Mouse over variable inspection
- Extensive on-line help
- The MPLAB IDE allows you to:
- Edit your source files (either assembly or C)
- One touch assemble (or compile) and download to PICmicro emulator and simulator tools (automatically updates all project information)
- Debug using:
 - source files (assembly or C)
 - absolute listing file (mixed assembly and C)
 - machine code

MPLAB IDE supports multiple debugging tools in a single development paradigm, from the cost effective simulators, through low cost in-circuit debuggers, to full-featured emulators. This eliminates the learning curve when upgrading to tools with increasing flexibility and power.

11.2 MPASM Assembler

The MPASM assembler is a full-featured, universal macro assembler for all PICmicro MCUs.

The MPASM assembler generates relocatable object files for the MPLINK object linker, Intel[®] standard HEX files, MAP files to detail memory usage and symbol reference, absolute LST files that contain source lines and generated machine code and COFF files for debugging.

The MPASM assembler features include:

- Integration into MPLAB IDE projects
- · User defined macros to streamline assembly code
- Conditional assembly for multi-purpose source files
- Directives that allow complete control over the assembly process

2: The maximum rated speed of the part limits the permissible combinations of voltage and frequency. Please reference the Product Identification System section for the maximum rated speed of the parts.

12.4 DC Characteristics: PIC16C62X/C62XA/CR62XA (Commercial, Industrial, Extended) PIC16LC62X/LC62XA/LCR62XA (Commercial, Industrial, Extended)

D041		with Schmitt Trigger input	0.8 VDD	_	VDD				
D042		MCLR RA4/T0CKI	0.8 Vdd	—	Vdd	V			
D043 D043A		OSC1 (XT, HS and LP) OSC1 (in RC mode)	0.7 Vdd 0.9 Vdd	_	Vdd	V	(Note 1)		

* These parameters are characterized but not tested.

† Data in "Typ" column is at 5V, 25°C unless otherwise stated. These parameters are for design guidance only and are not tested.

Note 1: In RC oscillator configuration, the OSC1 pin is a Schmitt Trigger input. It is not recommended that the PIC16C62X(A) be driven with external clock in RC mode.

2: The leakage current on the MCLR pin is strongly dependent on applied voltage level. The specified levels represent normal operating conditions. Higher leakage current may be measured at different input voltages.

3: Negative current is defined as coming out of the pin.

12.6 DC Characteristics:

PIC16C620A/C621A/C622A-40⁽³⁾ (Commercial) PIC16CR620A-40⁽³⁾ (Commercial)

DC CHARACTERISTICS Power Supply Pins				Standard Operating Conditions (unless otherwise stated) Operating temperature $0^{\circ}C \leq TA \leq +70^{\circ}C$ for commercial				
Characteristic	Sym	Min	Тур ⁽¹⁾	Max	Units	Conditions		
Supply Voltage	Vdd	4.5	_	5.5	V	HS Option from 20 - 40 MHz		
Supply Current ⁽²⁾	IDD	_	5.5 7.7	11.5 16	mA mA	Fosc = 40 MHz, VDD = 4.5V, HS mode Fosc = 40 MHz, VDD = 5.5V, HS mode		
HS Oscillator Operating Frequency	Fosc	20	_	40	MHz	OSC1 pin is externally driven, OSC2 pin not connected		
Input Low Voltage OSC1	Vi∟	Vss	_	0.2VDD	V	HS mode, OSC1 externally driven		
Input High Voltage OSC1	Vih	0.8Vdd	_	Vdd	V	HS mode, OSC1 externally driven		

* These parameters are characterized but not tested.

Note 1: Data in the Typical ("Typ") column is based on characterization results at 25°C. This data is for design guidance only and is not tested.

2: The supply current is mainly a function of the operating voltage and frequency. Other factors such as bus loading, oscillator type, bus rate, internal code execution pattern, and temperature also have an impact on the current consumption.

a) The test conditions for all IDD measurements in Active Operation mode are:

OSC1 = external square wave, from rail-to-rail; all I/O pins tri-stated, pulled to Vss,

T0CKI = VDD, MCLR = VDD; WDT disabled, HS mode with OSC2 not connected.

3: For device operation between DC and 20 MHz. See Table 12-1 and Table 12-2.

12.7 AC Characteristics: PIC16C620A/C621A/C622A-40⁽²⁾ (Commercial) PIC16CR620A-40⁽²⁾ (Commercial)

AC CHARACTERISTICS All Pins Except Power Supply Pir		Standard Operating Conditions (unless otherwise stated)Operating temperature $0^{\circ}C \leq TA \leq +70^{\circ}C$ for commercial				
Characteristic	Sym	Min	Typ ⁽¹⁾	Max	Units	Conditions
External CLKIN Frequency	Fosc	20	_	40	MHz	HS mode, OSC1 externally driven
External CLKIN Period	Tosc	25		50	ns	HS mode (40), OSC1 externally driven
Clock in (OSC1) Low or High Time	TosL, TosH	6			ns	HS mode, OSC1 externally driven
Clock in (OSC1) Rise or Fall Time	TosR, TosF	_	—	6.5	ns	HS mode, OSC1 externally driven

13.0 DEVICE CHARACTERIZATION INFORMATION

The graphs and tables provided in this section are for design guidance and are not tested. In some graphs or tables, the data presented is outside specified operating range (e.g., outside specified VDD range). This is for information only and devices will operate properly only within the specified range.

The data presented in this section is a statistical summary of data collected on units from different lots over a period of time. "Typical" represents the mean of the distribution, while "max" or "min" represents (mean + 3σ) and (mean - 3σ) respectively, where σ is standard deviation.

Sales and Support

Data Sheets

Products supported by a preliminary Data Sheet may have an errata sheet describing minor operational differences and recommended workarounds. To determine if an errata sheet exists for a particular device, please contact one of the following:

- 1. Your local Microchip sales office
- 2. The Microchip Corporate Literature Center U.S. FAX: (480) 792-7277
- 3. The Microchip Worldwide Site (www.microchip.com)

Please specify which device, revision of silicon and Data Sheet (include Literature #) you are using.

New Customer Notification System
